Collection of this data item should only be from notification and pathology reports relating to initial diagnosis and not for recurrent or subsequent metastatic disease.

Where there are multiple reports relating to the primary breast tumour (from different specimens), the 'most positive' value is chosen according to the following hierarchy: Positive > Equivocal > Negative > Test done but results not known > Test not done.

If oestrogen receptor assay tests are completed for invasive tumours with an in situ component, use the values from the invasive tumour.

Do not record oestrogen receptor values for in situ tumours.

For multifocal tumours, use the oestrogen receptor value from the largest focus or from a metastatic deposit, e.g. Lymph node metastasis. A smaller focus that is ER positive may in fact be the source of a metastasis and in this setting the patient would derive benefit from the therapy offered as a result of hormone receptor positive status.

Comments:

Hormone receptor status is an important prognostic indicator for breast cancer.

The Australian Cancer Network Working Party established to develop guidelines for the pathology reporting of breast cancer recommends that hormone receptor assays be performed on all cases of invasive breast carcinoma. The report should include

- the percentage of nuclei staining positive and the predominant staining intensity (low, medium, high) and
- a conclusion as to whether the assay is positive or negative.

---------------------------------	---------------------------------------

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>Revenues are to be reported in millions to the nearest 100,000 e.g. \$4,064,000 should be reported as \$4.1 million.</p> <p>Revenue arises from:</p> <ul style="list-style-type: none">• the sale of goods,• the rendering of services, and• the use by others of entity assets yielding interest, royalties and dividends. <p>Goods includes goods produced by the entity for the purpose of sale and goods purchased for resale, such as merchandise purchased by a retailer or land and other property held for resale.</p> <p>The rendering of services typically involves the performance by the entity of a contractually agreed task over an agreed period of time. The services may be rendered within a single period or over more than one period. Some contracts for the rendering of services are directly related to construction contracts, for example, those for the services of project managers and architects. Revenue arising from these contracts is not dealt with in this Standard but is dealt with in accordance with the requirements for construction contracts as specified in AASB 111</p>
-----------------------	--

Construction Contracts.

The use by others of entity assets gives rise to revenue in the form of:

- (a) interest – charges for the use of cash or cash equivalents or amounts due to the entity;
- (b) royalties – charges for the use of long-term assets of the entity, for example, patents, trademarks, copyrights and computer software; and
- (c) dividends – distributions of profits to holders of equity investments in proportion to their holdings of a particular class of capital.

Revenue is the gross inflow of economic benefits during the period arising in the course of the ordinary activities of an entity when those inflows result in increases in equity, other than increases relating to contributions from equity participants.

Revenue includes only the gross inflows of economic benefits received and receivable by the entity on its own account.

Amounts collected on behalf of third parties such as sales taxes, goods and services taxes and value added taxes are not economic benefits which flow to the entity and do not result in increases in equity. Therefore, they are excluded from revenue. Similarly, in an agency relationship, the gross inflows of economic benefits include amounts collected on behalf of the principal and which do not result in increases in equity for the entity. The amounts collected on behalf of the principal are not revenue. Instead, revenue is the amount of commission.

Collection methods:

Revenues are to be reported for the *Source of public and private revenue* and *Health industry relevant organisation type* data elements.

Source of public and private revenue

State and territory health authorities are NOT to report the following codes:

Codes 101–103; 204; 207; 301

Other drug of concern

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Episode of treatment for alcohol and other drugs – drug of concern (other), code (ASCDC 2000 extended) NNNN
<i>METeOR identifier:</i>	270110
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A drug apart from the principal drug of concern which the client states as being a concern, as represented by a code.
Data Element Concept:	Episode of treatment for alcohol and other drugs – drug of concern

Value domain attributes

Representational attributes

<i>Classification scheme:</i>	Australian Standard Classification of Drugs of Concern 2000	
<i>Representation class:</i>	Code	
<i>Data type:</i>	String	
<i>Format:</i>	NNNN	
<i>Maximum character length:</i>	4	
<i>Supplementary values:</i>	Value	Meaning
	0005	Opioid analgesics not further defined
	0006	Psychostimulants not further defined

Collection and usage attributes

<i>Guide for use:</i>	<p>The Australian Standard Classification of Drugs of Concern (ASCDC) provides a number of supplementary codes that have specific uses and these are detailed within the ASCDC e.g. 0000 = inadequately described.</p> <p>Other supplementary codes that are not already specified in the ASCDC may be used in National Minimum Data Sets (NMDS) when required. In the Alcohol and other drug treatment service NMDS, two additional supplementary codes have been created which enable a finer level of detail to be captured:</p> <p>CODE 0005 Opioid analgesics not further defined</p> <p>This code is to be used when it is known that the client's principal drug of concern is an opioid but the specific opioid used is not known. The existing code 1000 combines opioid analgesics and non-opioid analgesics together into Analgesics nfd and the finer level of detail, although known, is lost.</p> <p>CODE 0006 Psychostimulants not further defined</p> <p>This code is to be used when it is known that the client's principal drug of concern is a psychostimulant but not which type. The existing code 3000 combines stimulants and</p>
-----------------------	---

hallucinogens together into Stimulants and hallucinogens nfd and the finer level of detail, although known, is lost.

Psychostimulants refer to the types of drugs that would normally be coded to 3100-3199, 3300-3399 and 3400-3499 categories plus 3903 and 3905.

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Record each additional drug of concern (according to the client) relevant to the treatment episode. The other drug of concern does not need to be linked to a specific treatment type. More than one drug may be selected. There should be no duplication with the principal drug of concern.
<i>Collection methods:</i>	Any other drug of concern for the client should be recorded upon commencement of a treatment episode. For clients whose treatment episode is related to the alcohol and other drug use of another person, this metadata item should not be collected.
<i>Comments:</i>	This item complements principal drug of concern. The existence of other drugs of concern may have a role in determining the types of treatment required and may also influence treatment outcomes.

Other treatment type for alcohol and other drugs

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Episode of treatment for alcohol and other drugs – treatment type (other), code [N]
<i>METeOR identifier:</i>	270076
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	All other forms of treatment provided to the client in addition to the main treatment type for alcohol and other drugs, as represented by a code.
Data Element Concept:	Episode of treatment for alcohol and other drugs – treatment type

Value domain attributes

Representational attributes

<i>Representation class:</i>	Code												
<i>Data type:</i>	Number												
<i>Format:</i>	[N]												
<i>Maximum character length:</i>	1												
<i>Permissible values:</i>	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>1</td><td>Withdrawal management (detoxification)</td></tr><tr><td>2</td><td>Counselling</td></tr><tr><td>3</td><td>Rehabilitation</td></tr><tr><td>4</td><td>Pharmacotherapy</td></tr><tr><td>5</td><td>Other</td></tr></tbody></table>	Value	Meaning	1	Withdrawal management (detoxification)	2	Counselling	3	Rehabilitation	4	Pharmacotherapy	5	Other
Value	Meaning												
1	Withdrawal management (detoxification)												
2	Counselling												
3	Rehabilitation												
4	Pharmacotherapy												
5	Other												

Collection and usage attributes

<i>Guide for use:</i>	<p>CODE 1 Withdrawal management (detoxification) Refers to any form of withdrawal management, including medicated and non-medicated.</p> <p>CODE 2 Counselling Refers to any method of individual or group counselling directed towards identified problems with alcohol and/or other drug use or dependency. This selection excludes counselling activity that is part of a rehabilitation program as defined in Code 3.</p> <p>CODE 3 Rehabilitation Refers to an intensive treatment program that integrates a range of services and therapeutic activities that may include counselling, behavioural treatment approaches, recreational activities, social and community living skills, group work and relapse prevention. Rehabilitation treatment can provide a high level of support (i.e. up to 24 hours a day) and tends towards a medium to longer-term duration. Rehabilitation activities can occur in residential or non-residential settings. Counselling that is</p>
-----------------------	---

included within an overall rehabilitation program should be coded to Code 3 for Rehabilitation, not to Code 2 as a separate treatment episode for counselling.

CODE 4 Pharmacotherapy

Refers to pharmacotherapies that include those used as maintenance therapies (e.g. naltrexone, buprenorphine, and methadone treatment) and those used as relapse prevention. Use Code 1 (withdrawal management) where a pharmacotherapy is used solely for withdrawal. Note collection exclusions: excludes clients who are on an opioid pharmacotherapy maintenance program and are not receiving any other form of treatment.

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	To be completed at cessation of treatment episode. Only report treatment recorded in the client's file that is in addition to, and not a component of, the main treatment type for alcohol and other drugs. Treatment activity reported here is not necessarily for principal drug of concern in that it may be treatment for other drugs of concern. More than one code may be selected.
<i>Collection methods:</i>	This field should be left blank if there are no other treatment types for the episode.
<i>Comments:</i>	Information about treatment provided is of fundamental importance to service delivery and planning.

Collection and usage attributes

Guide for use:

The rules for allocating (mapping) clinic services to the clinic codes structure is the responsibility of each State and Territory and these rules need to be applied consistently within each State and Territory.

In most cases, reference to the code guide of permissible values will be adequate to map a hospital's clinics to the data domain. If not, general principles for mapping existing clinics to the data domain should take account of (a) the nature of the specialty, (b) patient characteristics, e.g. age, and (c) the field of practice of the service provider.

Where the patient characteristics have determined that a paediatric clinic type is appropriate, then further differentiation between surgical and medical is determined by (a) the nature of the specialty, and (b) the field of practice of the service provider. That is, paediatric medical would include any investigations, treatment(s) or services provided to a child which do not pertain to the surgical care of diseases or injuries.

In paediatric hospitals, the full range of clinic types should be used.

A guide for the permissible values of codes for the outpatient clinic types is as follows:

CODE 1 Allied Health

- Audiology.
- Clinical Pharmacology.
- Neuropsychology.
- Dietetics.
- Occupational therapy.
- Optometry.
- Orthoptics.
- Orthotics.
- Physiotherapy.
- Podiatry.
- Prosthetics.
- Psychology.
- Social work.
- Speech pathology.

Includes clinics specified in mapping list above run solely by these Allied Health (AH) professionals. Example: A speech Pathologist conducting a clinic with booked patients for speech pathology services.

Excludes services provided by AH professionals in clinics classified in codes 2-23. Example: a physiotherapist running a

cardiac rehabilitation clinic is classified to the Cardiology Clinic (see code 5).

CODE 2 Dental

- Dental.

CODE 3 Gynaecology

- Gynaecology.
- Gynaecological oncology (excluding chemotherapy).
- Menopause.
- Assisted reproduction, infertility.
- Family planning.

CODE 4 Obstetrics

- Obstetrics.
- Childbirth education.
- Antenatal.
- Postnatal.

Excludes gestational diabetes (see code 6).

CODE 5 Cardiology

- Cardiac rehabilitation.
- ECG.
- Doppler.
- Cardiac stress test.
- Hypertension.
- Pacemaker.

Excludes cardiac catheterisation (see code 22).

CODE 6 Endocrinology

- Endocrine.
- Gestational diabetes.
- Thyroid.
- Metabolic.
- Diabetes.
- Diabetes education.

CODE 7 Oncology

- Oncology.
- Lymphoedema.
- Radiation oncology.

Excludes chemotherapy (see code 20).

Excludes gynaecological oncology (see code 3).

CODE 8 Respiratory

- Asthma.
- Asthma education.
- Respiratory; excludes tuberculosis (see code 10).

- Cystic Fibrosis.
- Sleep.
- Pulmonary.

CODE 9 Gastroenterology

- Gastroenterology.

Excludes endoscopy (see code 13).

CODE 10 Medical

- Aged care, geriatric, gerontology.
- Allergy.
- Anti-coagulant.
- Clinical Measurement; include with relevant specialty clinic type where clinical measurement services are specific to a specialty (see codes 1-23) e.g. urodynamic analysis is counted with Urology (see code 15).
- Dementia.
- Dermatology.
- Development disability.
- Epilepsy.
- Falls.
- General medicine.
- Genetic.
- Haematology, haemophilia.
- Hepatobiliary.
- Hyperbaric medicine.
- Immunology, HIV.
- Infectious diseases; Communicable diseases; Hep B, C; includes tuberculosis.
- Men's Health.
- Metabolic bone.
- Excludes Nephrology (see code 24); excludes renal (see code 24); excludes dialysis (see code 21).
- Neurology, neurophysiology.
- Occupational medicine.
- Other.
- Pain management
- Palliative.
- Refugee clinic.
- Rehabilitation; excludes cardiac rehabilitation (see code 5).
- Rheumatology.
- Sexual Health.
- Spinal.

- Stoma therapy.
- Transplants (excludes kidney transplants see code 24).
- Wound, Dressing clinic.

CODE 11 General practice/primary care

- General Practice, Primary Care.

Excludes Medicare billable patients; defined specialty general practice clinics only.

CODE 12 Paediatric Medical

- Adolescent health.
- Neonatology.
- Paediatric medicine.

In paediatric hospitals the full range of service types should be used. That is, paediatric medical should be reported as medical and paediatric surgery should be reported as surgery.

CODE 13 Endoscopy

Includes all occasions of service for endoscopy including cystoscopy, gastroscopy, oesophagoscopy, duodenoscopy, colonoscopy, bronchoscopy, laryngoscopy and sigmoidoscopy.

Care must be taken to ensure procedures for admitted patients are excluded from this category.

CODE 14 Plastic surgery

- Craniofacial.
- Melanoma.
- Plastic surgery.

CODE 15 Urology

- Urology.

Includes urodynamic measurement and IVPs.

CODE 16 Orthopaedic surgery

- Fracture.
- Hand.
- Orthopaedics Surgery.
- Other.
- Scoliosis.
- Neck of femur.

CODE 17 Ophthalmology

- Ophthalmology.
- Cataract extraction.
- Lens insertion.

CODE 18 Ear, nose and throat

- Ear, nose and throat.
- Otitis media.
- Oral.

CODE 19 Pre-admission and pre-anaesthesia

- Pre-admission.
- Pre-anaesthesia.

CODE 20 Chemotherapy

Includes all forms of chemotherapy.

CODE 21 Dialysis

Dialysis and includes renal dialysis education. See code 24 for Renal medicine

CODE 22 Surgery

- Cardiac.
- Vascular.
- Cardiac catheterisation.
- Colorectal.
- Upper GI surgery.
- General surgery.
- Neurosurgery.
- Other surgery.
- Thoracic surgery.

CODE 23 Paediatric surgery

In paediatric hospitals the full range of service types should be used. That is, paediatric medical should be reported as medical and paediatric surgery should be reported as surgery.

CODE 24 Renal Medical

- Renal Medicine.
- Nephrology.
- Includes pre and post transplant treatment, support and education.
- Excludes dialysis and renal dialysis education. See code 21.

Value	Meaning						
1	Overdue patient						
2	Other						

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>This metadata item is only required for patients in Elective surgery waiting list episode – clinical urgency, code N categories with specified maximum desirable waiting times. Overdue patients are those for whom the hospital system has failed to provide timely care and whose wait may have an adverse effect on the outcome of their care. They are identified by a comparison of Elective surgery waiting list episode – waiting time (at removal), total days N[NNN] or Elective surgery waiting list episode – waiting time (at a census date), total days N[NNN] and the maximum desirable time limit for the Elective surgery waiting list episode – clinical urgency, code N classification.</p> <p>A patient is classified as overdue if ready for care and waiting time at admission or waiting time at a census date is longer than 30 days for patients in Elective surgery waiting list episode – clinical urgency, code N category 1 or 90 days for patients in Elective surgery waiting list episode – clinical urgency, code N category 2.</p>
<i>Comments:</i>	<p>This metadata item is not used for patients in Elective surgery waiting list episode – clinical urgency, code N category 3 as there is no specified timeframe within which it is desirable that they</p>

are admitted. The metadata item Elective surgery waiting list episode—extended wait patient indicator, status code N identifies patients in Elective surgery waiting list episode—clinical urgency, code N category 3 who have waited longer than one year at admission or at the time of a census.

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>CODE 1 Private residence This may include a caravan, a mobile home, a houseboat or a unit in a retirement village.</p> <p>CODE 2 Residential - aged care setting Includes high and low care residential aged care facilities. Does not include units in a retirement village.</p> <p>CODE 3 Residential - other setting Includes a residential facility other than an aged care facility; a prison; or a community living environment including a group home. This code does not include inpatient settings e.g. hospitals and hospices.</p>
-----------------------	---

CODE 4 Non-residential setting

Includes day respite centres and day centres. It does not include hospital outpatient departments.

CODE 5 Inpatient - designated palliative care unit or hospice

A dedicated ward or unit that receives identified funding for palliative care and/or primarily delivers palliative care. The unit may be a standalone unit (i.e. a hospice).

CODE 6 Inpatient - other than designated palliative care unit

Includes all beds not in a unit designated for palliative care. These are usually located in acute hospital wards. Excludes designated palliative care units.

CODE 7 Outpatient - in a hospital/hospice

Includes palliative care services provided at a hospital/hospice in an outpatient setting. Excludes all inpatient settings.

Collection methods:

More than one code can be recorded.

Collection and usage attributes

<i>Guide for use:</i>	<p>A formal working partnership involves arrangements between a service provider organisation and other service providers and organisations, aimed at providing integrated and seamless care, so that clients are able to move smoothly between services and service settings.</p> <p>A formal working partnership is a verbal or written agreement between two or more parties. It specifies the roles and responsibilities of each party, including the expected outcomes of the agreement.</p>
-----------------------	---

Key elements of a formal working partnership are that it is organised, routine, collaborative, and systematic. It excludes ad hoc arrangements. Examples of formal working partnerships include the existence of: written service agreements; formal liaison; referral and discharge planning processes; formal and routine consultation; protocols; partnership working groups; memoranda of understanding with other providers; and case conferencing.

Where partnerships exist for case conferencing purposes, record all partners involved.

CODE 1 Palliative care services

Includes services whose substantive work is with patients who have a life-limiting illness. These palliative care services may provide services in the community and/or in admitted patient settings (including hospices).

CODE 2 Hospitals

Includes emergency departments. Excludes hospices/designated palliative care units in a hospital, and other palliative care agencies as defined under Code 1. Also excludes hospital-based allied health services and individual medical practitioners.

CODE 7 Medical practices

Includes practices of general practitioners and individual specialist physicians such as specialists in palliative care, oncologists, urologists and neurologists.

CODE 8 Integrated health centres

Includes multipurpose centres, aged care centres and specialist care centres such as cancer centres.

CODE 9 Universities/research centres

Includes universities that may undertake research and development projects.

CODE 99 Other

Includes organisations based in the community such as schools, clubs, workplaces, organisations that provide respite care or pastoral care and 'Meals on wheels'.

Collection methods:

More than one code can be recorded.

Patient days

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – number of patient days, total N[N(7)]
<i>METeOR identifier:</i>	270045
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The total number of days for all patients who were admitted for an episode of care and who separated during a specified reference period.
Data Element Concept:	Establishment – number of patient days

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Number
<i>Format:</i>	N[N(7)]
<i>Maximum character length:</i>	8
<i>Unit of measure:</i>	Day

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>A day is measured from midnight to 2359 hours.</p> <p>The following basic rules are used to calculate the number of patient days for overnight stay patients:</p> <ul style="list-style-type: none">• The day the patient is admitted is a patient day• If the patient remains in hospital from midnight to 2359 hours count as a patient day• The day a patient goes on leave is counted as a leave day• If the patient is on leave from midnight to 2359 hours count as a leave day• The day the patient returns from leave is counted as a patient day• The day the patient is separated is not counted as a patient day. <p>The following additional rules cover special circumstances and in such cases, override the basic rules:</p> <ul style="list-style-type: none">• Patients admitted and separated on the same date (same-day patients) are to be given a count of one patient day• If the patient is admitted and goes on leave on the same day, count as a patient day• If the patient returns from leave and goes on leave on the same date, count as a leave day.
-----------------------	--

- If the patient returns from leave and is separated, it is not counted as either a patient day or a leave day.
- If a patient goes on leave the day they are admitted and does not return from leave until the day they are discharged, count as one patient day (the day of admission is counted as a patient day, the day of separation is not counted as a patient day).

When calculating total patient days for a specified period:

- Count the total patient days of those patients separated during the specified period including those admitted before the specified period
- Do not count the patient days of those patients admitted during the specified period who did not separate until the following reference period
- Contract patient days are included in the count of total patient days. If it is a requirement to distinguish contract patient days from other patient days, they can be calculated by using the rules contained in the data element: total contract patient days.

Patient listing status

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Elective surgery waiting list episode – patient listing status, readiness for care code N
<i>METeOR identifier:</i>	269996
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of the person's readiness to begin the process leading directly to being admitted to hospital for the awaited procedure, as represented by a code.
Data Element Concept:	Elective surgery waiting list episode – patient listing status

Value domain attributes

Representational attributes

<i>Representation class:</i>	Code						
<i>Data type:</i>	Number						
<i>Format:</i>	N						
<i>Maximum character length:</i>	1						
<i>Permissible values:</i>	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>1</td><td>Ready for care</td></tr><tr><td>2</td><td>Not ready for care</td></tr></tbody></table>	Value	Meaning	1	Ready for care	2	Not ready for care
Value	Meaning						
1	Ready for care						
2	Not ready for care						

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>A patient may be 'ready for care' or 'not ready for care'. Ready for care patients are those who are prepared to be admitted to hospital or to begin the process leading directly to admission. These could include investigations/procedures done on an outpatient basis, such as autologous blood collection, pre-operative diagnostic imaging or blood tests. Not ready for care patients are those who are not in a position to be admitted to hospital. These patients are either:</p> <ul style="list-style-type: none">staged patients whose medical condition will not require or be amenable to surgery until some future date; for example, a patient who has had internal fixation of a fractured bone and who will require removal of the fixation device after a suitable time; ordeferred patients who for personal reasons are not yet prepared to be admitted to hospital; for example, patients with work or other commitments which preclude their being admitted to hospital for a time. <p>Not ready for care patients could be termed staged and deferred waiting list patients, although currently health authorities may use different terms for the same concepts.</p>
-----------------------	--

Staged and deferred patients should not be confused with patients whose operation is postponed for reasons other than their own unavailability, for example; surgeon unavailable, operating theatre time unavailable owing to emergency workload. These patients are still 'ready for care'.

Periods when patients are not ready for care should be excluded in determining 'Waiting time (at removal)' and 'Waiting time (at a census date)'.

Comments:

Only patients ready for care are to be included in the National Minimum Data Set - Elective surgery waiting times. The dates when a patient listing status changes need to be recorded. A patient's classification may change if he or she is examined by a clinician during the waiting period, i.e. undergoes **clinical review**. The need for clinical review varies with the patient's condition and is therefore at the discretion of the treating clinician. The waiting list information system should be able to record dates when the classification is changed (metadata item Category reassignment date).

At the Waiting Times Working Group meeting on 9 September 1996, it was agreed to separate the metadata items Patient listing status, readiness for care and Clinical urgency as the combination of these items had led to confusion.

Patients in residence at year end

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – patients/clients in residence at year end, total N[NNN]
<i>METeOR identifier:</i>	270046
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A headcount of all formally admitted patients/clients in residence in long-stay facilities.
Data Element Concept:	Establishment – patients/clients in residence at year end

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Number
<i>Format:</i>	N[NNN]
<i>Maximum character length:</i>	4
<i>Unit of measure:</i>	Person

Data element attributes

Collection and usage attributes

<i>Collection methods:</i>	<p>For public psychiatric hospitals and alcohol and drug hospitals, all states have either an annual census or admission tracking that would enable a statistical census. The Commonwealth Department of Health and Ageing is able to carry out a statistical census from its residential aged care service databases.</p> <p>A headcount snapshot could be achieved either by census or by the admission/discharge derivation approach.</p> <p>There are difficulties with the snapshot in view of both seasonal and day of the week fluctuations. Most of the traffic occurs in a small number of beds.</p> <p>Any headcount should avoid the problems associated with using 31 December or 1 January. The end of the normal financial year is probably more sensible (the Wednesday before the end of the financial year was suggested, but probably not necessary). This should be qualified by indicating that the data does not form a time series in its own right.</p>
<i>Comments:</i>	<p>The number of separations and bed days for individual long-stay establishments is often a poor indication of the services provided. This is because of the relatively small number of separations in a given institution. Experience has shown that the number of patients/clients in residence can often give a more reliable picture of the levels of services being provided.</p>

Collection and usage attributes

<i>Guide for use:</i>	Vaginal tear is included in the same group as 1st degree laceration to be consistent with ICD-10-AM code. Other degrees of laceration are as defined in ICD-10-AM.
<i>Comments:</i>	While 4th degree laceration is more severe than an episiotomy it has not been placed in order of clinical significance within the data domain. Instead it has been added to the data domain as a new code rather than modifying the existing order of data domain code values. This is because information gatherers are accustomed to the existing order of the codes. Modifying the existing order may result in miscoding of data. This approach is consistent with established practice in classifications wherein a new data domain identifier (or code number) is assigned to any new value meaning that occurs, rather than assigning this new value domain meaning to an existing data domain identifier.

Data element attributes

Collection and usage attributes

Comments: Perineal laceration (tear) may cause significant maternal morbidity in the postnatal period. Episiotomy is an indicator of management during labour and, to some extent, of intervention rates.

Collection and usage attributes

<i>Guide for use:</i>	CODE 9 Not stated/inadequately described This code is not for use in primary data collections.
-----------------------	---

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	CODE 1 Yes: Record if peripheral neuropathy is present in the person. CODE 2 No: Record if peripheral neuropathy is not present in the person. Record whether or not peripheral neuropathy is present determined by clinical judgement following assessment using pinprick and vibration (using perhaps a Biothesiometer) or Monofilament.
<i>Collection methods:</i>	Examine for neuropathy by testing reflexes and sensation preferably using tuning fork (standard vibration fork 128 hz), pinprick, 10g monofilament and/or biothesiometer. The preferred assessment methods are monofilament and biothesiometer. These two non-invasive tests provide more objective and repeatable results than testing sensation with pinprick or a tuning fork, which are very difficult to standardise.

1 The 'Touch-Test' Sensory Evaluation (Semens-Weinstein Monofilaments) application guidelines:

- Occlude the patient's vision by using a shield or by having the patient look away or close his or her eyes.
- Instruct the patient to respond when a stimulus is felt by saying 'touch' or 'yes'.
- Prepare to administer the stimulus to the foot (dorsal or plantar surface).
- Press the filament of the Touch
- Test at a 90 degree angle against the skin until it bows. Hold in place for approximately 1.5 seconds and then remove.

To assure the validity of the sensory test findings:

- The patient must not be able to view the administration of the stimuli so that false indications are avoided.
- The nylon filament must be applied at a 90 degree angle against the skin until it bows for approximately 1.5 second before removing.
- If the patient does not feel the filament, then protective pain sensation has been lost.

2 Testing vibration sensation with a biothesiometer - application guidelines:

- The biothesiometer has readings from 0 to 50 volts. It can be made to vibrate at increasing intensity by turning a dial.
- A probe is applied to part of the foot, usually on the big toe.
- The person being tested indicates as soon as he/she can feel the vibration and the reading on the dial at that point is recorded.

The reading is low in young normal individuals (i.e. they are very sensitive to vibration). In older individuals, the biothesiometer reading becomes progressively higher. From experience, it is known that the risk of developing a neuropathic ulcer is much higher if a person has a biothesiometer reading greater than 30-40 volts.

Collection and usage attributes

<i>Guide for use:</i>	CODE 9 Not stated/inadequately described This code is not for use in primary data collections.
-----------------------	---

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	CODE 1 Yes: Record if peripheral vascular disease is present in either foot. CODE 2 No: Record if peripheral vascular disease is not present in either foot.
<i>Collection methods:</i>	If it is mild, peripheral vascular disease can be completely without symptoms. However, compromised blood supply in the long term could cause claudication (pain in the calf after walking for a distance or up an incline or stairs), rest pain or vascular ulceration. Physical examination is necessary to assess the peripheral vascular circulation. Purplish colour and cold temperature of feet are indications to suspect that the circulation may be impaired. Palpate pulses: The simplest method to estimate blood flow and to detect

ischaemia to the lower extremities is palpation of the foot pulses (posterior tibial and dorsalis pedis arteries) in both feet. Note whether pulses are present or absent. If pulses in the foot can be clearly felt, the risk of foot ulceration due to vascular disease is small.

Test capillary return:

A helpful confirmation sign of arterial insufficiency is pallor of the involved feet after 1 - 2 min of elevation if venous filling time is delayed beyond the normal limit of 15 sec.

Doppler probe:

If pulses cannot be palpated, apply a small hand-held Doppler, placed over the dorsalis pedis or posterior tibial arteries to detect pulses, quantify the vascular supply and listen to the quality of the signal.

When the foot pulses are very weak or not palpable, the risk assessment could be completed by measuring the ankle brachial index (ankle pressure/ brachial pressure). Normal ankle brachial index is 0.9 - 1.2. An ankle brachial index less than 0.6 indicates compromised peripheral circulation.

Collection and usage attributes

<i>Guide for use:</i>	CODE 1 Aspirin Includes: aspirin, astrix, cardiprin, cartia, aspro, disprin and solprin
	CODE 2 Angiotensin converting enzyme (ACE) inhibitor Includes: captopril, enalapril, fosinopril, lisinopril, perindopril, quinapril, ramipril andtrandolapril
	CODE 3 Angiotensin II receptor blocker

Includes: candesartan, eprosartan, irbesartan, losartin and temisartan

CODE 4 Antithrombin

Includes: dalteparin, danaparoid, enoxaparin, heparin, phenindione, warfarin, bivalirudin, fondaparinux, lepirudin

CODE 5 Beta-blocker

Includes: atenolol, bisoprolol, carvedilol, esmolol, labetolol, metoprolol, oxprenolol, pindolol, propranolol and sotalol

CODE 6 Clopidogrel

Includes: iscover and plavix

CODE 7 Fibrinolytic

Includes: streptokinase, tissue plasminogen activator (t-PA) (alteplase), reteplase (r-PA) and tenecteplase (TNK t-PA)

CODE 8 Glycoprotein IIb/IIIa receptor

Includes: abciximab, eptifibatide and tirofiban

CODE 9 Statin

Includes: atorvastatin, fluvastatin, pravastatin and simvastatin

Data element attributes

Collection and usage attributes

Guide for use:

A person may be prescribed one or more type of medication for acute coronary syndromes. Therefore more than one code may be recorded.

Collection methods:

This information should be recorded at the end of the person's hospital stay involving the treatment of acute coronary syndromes.

Comments:

The purpose of this data element is to collect information on the prescription of pharmacotherapy recommended for the treatment of acute coronary syndromes in the national guidelines. Additional information on the specific drug types prescribed is not required for this quality purpose.

The health service may choose to collect additional information on the specific drug types prescribed within each of the core pharmacotherapies.

-----------------------	---

CODE 5 Clopidogrel

Includes: iscover and plavix

CODE 6 Statin

Includes: atorvastatin, fluvastatin, pravastatin and simvastatin

Data element attributes

Collection and usage attributes

Guide for use:

A person may be taking one or more type of medication for acute coronary syndromes (ACS). Therefore more than one code may be recorded.

Collection methods:

Following a person's hospital stay for ACS, follow-up consultations with a clinician may occur at various intervals, such as 3, 6 or 12 months after discharge from hospital. The medications being taken by the person at the time of each follow-up consultation should be recorded.

Comments:

The pharmacotherapies for the treatment of ACS that could be taken post discharge from hospital are different from the types that could be taken during the hospital stay as not all of the pharmacotherapies used for the treatment of ACS are for out of hospital use.

Physical activity sufficiency status

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Person – physical activity sufficiency status, code N
<i>METeOR identifier:</i>	270054
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Sufficiency of moderate or vigorous physical activity to confer a health benefit, as represented by a code.
Data Element Concept:	Person – physical activity sufficiency status

Value domain attributes

Representational attributes

<i>Representation class:</i>	Code								
<i>Data type:</i>	Number								
<i>Format:</i>	N								
<i>Maximum character length:</i>	1								
<i>Permissible values:</i>	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>1</td><td>Sufficient</td></tr><tr><td>2</td><td>Insufficient</td></tr><tr><td>3</td><td>Sedentary</td></tr></tbody></table>	Value	Meaning	1	Sufficient	2	Insufficient	3	Sedentary
Value	Meaning								
1	Sufficient								
2	Insufficient								
3	Sedentary								
<i>Supplementary values:</i>	9 Not stated/inadequately described								

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>The clinician makes a judgment based on assessment of the person's reported physical activity history for a usual 7-day period where:</p> <p>CODE 1: Sufficient physical activity for health benefit for a usual 7-day period is calculated by summing the total minutes of walking, moderate and/or vigorous physical activity. Vigorous physical activity is weighted by a factor of two to account for its greater intensity. Total minutes for health benefit need to be equal to or more than 150 minutes per week.</p> <p>CODE 2: Insufficient physical activity for health benefit is where the sum of the total minutes of walking, moderate and/or vigorous physical activity for a usual 7-day period is less than 150 minutes but more than 0 minutes.</p> <p>CODE 3: Sedentary is where there has been no moderate and/or vigorous physical activity during a usual 7-day period.</p>
-----------------------	--

CODE 9:

There is insufficient information to more accurately define the person's physical activity sufficiency status or the information is not known.

Note: The National Heart Foundation of Australia and the National Physical Activity Guidelines for Australians describes moderate-intensity physical activity as causing a slight but noticeable, increase in breathing and heart rate and suggests that the person should be able to comfortably talk but not sing. Examples of moderate physical activity include brisk walking, low pace swimming, light to moderate intensity exercise classes. Vigorous physical activity is described as activity, which causes the person to 'huff and puff', and where talking in a full sentence between breaths is difficult.

Examples of vigorous physical activity include jogging, swimming (freestyle) and singles tennis.

Comments:

The above grouping subdivides a population into three mutually exclusive categories.

A sufficiently physically active person is a person who is physically active on a regular weekly basis equal to or in excess of that required for a health benefit. Sufficient physical activity for health results from participation in physical activity of adequate duration and intensity. Although there is no clear absolute threshold for health benefit, the accrual of 150 minutes of moderate (at least) intensity physical activity over a period of one week is thought to confer health benefit. Walking is included as a moderate intensity physical activity. Note that the 150 minutes of moderate physical activity should be made up of 30 minutes on most days of the week and this can be accumulated in 10 minute bouts (National Physical Activity Guidelines for Australians).

Health benefits can also be obtained by participation in vigorous physical activity, in approximate proportion to the total amount of activity performed, measured either as energy expenditure or minutes of physical activity (Pate et al. 1995).

Physical activity - health benefit for vigorous physical activity is calculated by:

- incorporating a weighted factor of 2, to account for its greater intensity
- summing the total minutes of walking, moderate and/or vigorous physical activity will then give an indication if a health benefit is likely.

Insufficient physical activity describes a person who engages in regular weekly physical activity but not to the level required for a health benefit through either moderate or vigorous physical activity.

A sedentary person is a person who does not engage in any regular weekly physical activity.

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Australia Post maintains a Postal Address File (PAF) database which contains Australian postal delivery addresses and their corresponding eight (8) character unique identification number known as a Delivery Point Identifier (DPID). While the PAF is concerned with postal address, for many persons' a postal address will be the same as their residential address. The PAF can be used to improve the recording of address data at the time of data collection. The Postal Address File may be used at the time of data collection to confirm that the combined metadata items of address line, suburb/town/locality, Australian state/territory identifier and postcode - Australian are accurately recorded.
<i>Collection methods:</i>	The Delivery Point Identifier (DPID) is assigned electronically to recognised Australia Post delivery addresses following reference to the Postal Address File (PAF) database.

Comments:

In October 1999, Australia Post introduced a bar-coding system for bulk mail lodgements. Agencies or establishments can use software to improve the quality of person address data it collects and records and, at the same time, receive financial benefits by reducing its postage expenses.

The DPID is easily converted to a bar code and can be included on correspondence and address labels. If the bar code is displayed on a standard envelope that passes through a mail-franking machine (e.g. as used by most major hospitals), the postage cost is reduced. Every three months, Australia Post provides updates to the PAF database. For more information, contact Australia Post.

Postcode—Australian (person)

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Person (address) – Australian postcode, code (Postcode datafile) {NNNN}
<i>Synonymous names:</i>	Australian postcode
<i>METeOR identifier:</i>	287224
<i>Registration status:</i>	Health, Standard 04/05/2005 Community services, Standard 25/08/2005 Housing assistance, Standard 10/02/2006
<i>Definition:</i>	The numeric descriptor for a postal delivery area, aligned with locality, suburb or place for the address of a person.
Data Element Concept:	Person (address) – Australian postcode

Value domain attributes

Representational attributes

<i>Classification scheme:</i>	Postcode datafile
<i>Representation class:</i>	Code
<i>Data type:</i>	Number
<i>Format:</i>	{NNNN}
<i>Maximum character length:</i>	4

Collection and usage attributes

<i>Comments:</i>	<p>Postcode - Australian may be used in the analysis of data on a geographical basis, which involves a conversion from postcodes to the Australian Bureau of Statistics (ABS) postal areas. This conversion results in some inaccuracy of information. However, in some data sets postcode is the only geographic identifier, therefore the use of other more accurate indicators (e.g. Statistical Local Area (SLA)) is not always possible.</p> <p>When dealing with aggregate data, postal areas, converted from postcodes, can be mapped to Australian Standard Geographical Classification codes using an ABS concordance, for example to determine SLAs. It should be noted that such concordances should not be used to determine the SLA of any individual's postcode. Where individual street addresses are available, these can be mapped to ASGC codes (e.g. SLAs).</p>
------------------	--

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	The postcode book is updated more than once annually; as postcodes are a dynamic entity and are constantly changing.
<i>Collection methods:</i>	Leave Postcode - Australian blank for:

- Any overseas address
- Unknown address
- No fixed address.

May be collected as part of Address line or separately. Postal addresses may be different from where a person actually resides.

Postpartum complication

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Birth event – complication (postpartum), code (ICD-10-AM 7th edn) ANN{.N[N]}
<i>METeOR identifier:</i>	391336
<i>Registration status:</i>	Health, Standard 22/12/2009
<i>Definition:</i>	Medical and obstetric complications of the mother occurring during the postnatal period up to the time of separation from care, as represented by a code.
Data Element Concept:	Birth event – complication (postpartum)

Value domain attributes

Representational attributes

<i>Classification scheme:</i>	International Statistical Classification of Diseases and Related Health Problems, Tenth Revision, Australian Modification 7th edition
<i>Representation class:</i>	Code
<i>Data type:</i>	String
<i>Format:</i>	ANN{.N[N]}
<i>Maximum character length:</i>	6

Collection and usage attributes

<i>Guide for use:</i>	Complications and conditions should be coded within the Pregnancy, Childbirth, Puerperium chapter 15 of Volume 1, ICD-10-AM.
-----------------------	--

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	There is no arbitrary limit on the number of conditions specified.
<i>Comments:</i>	Examples of such conditions include postpartum haemorrhage, retained placenta, puerperal infections, puerperal psychosis, essential hypertension, psychiatric disorders, diabetes mellitus, epilepsy, cardiac disease and chronic renal disease. Complications of the puerperal period may cause maternal morbidity, and occasionally death, and may be an important factor in prolonging the duration of hospitalisation after childbirth.

Preferred language

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Person – preferred language, code (ASCL 2005) NN{NN}
<i>METeOR identifier:</i>	304128
<i>Registration status:</i>	Health, Standard 08/02/2006 Community services, Standard 29/04/2006
<i>Definition:</i>	The language (including sign language) most preferred by the person for communication, as represented by a code.
Data Element Concept:	Person – preferred language

Value domain attributes

Representational attributes

<i>Classification scheme:</i>	Australian Standard Classification of Languages 2005
<i>Representation class:</i>	Code
<i>Data type:</i>	Number
<i>Format:</i>	NN{NN}
<i>Maximum character length:</i>	4

Collection and usage attributes

<i>Guide for use:</i>	<p>The Australian Standard Classification of Languages (ASCL) has a three-level hierarchical structure. The most detailed level of the classification consists of base units (languages) which are represented by four-digit codes. The second level of the classification comprises narrow groups of languages (the Narrow Group level), identified by the first two digits. The most general level of the classification consists of broad groups of languages (the Broad Group level) and is identified by the first digit. The classification includes Australian Indigenous languages and sign languages.</p> <p>For example, the Lithuanian language has a code of 3102. In this case 3 denote that it is an Eastern European language, while 31 denote that it is a Baltic language. The Pintupi Aboriginal language is coded as 8713. In this case 8 denote that it is an Australian Indigenous language and 87 denote that the language is Western Desert language.</p> <p>Language data may be output at the Broad Group level, Narrow Group level or base level of the classification. If necessary significant Languages within a Narrow Group can be presented separately while the remaining Languages in the Narrow Group are aggregated. The same principle can be adopted to highlight significant Narrow Groups within a Broad Group.</p>
-----------------------	---

Data element attributes

Collection and usage attributes

Guide for use: This may be a language other than English even where the person can speak fluent English.

Pregnancy duration at the first antenatal care visit

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Pregnancy – estimated duration (at the first visit for antenatal care), completed weeks N[N]
<i>Synonymous names:</i>	Estimated pregnancy gestation in completed weeks at the first visit for antenatal care.
<i>METeOR identifier:</i>	379597
<i>Registration status:</i>	Health, Standard 02/12/2009
<i>Definition:</i>	The total number of completed weeks of a pregnancy's estimated duration on the day of the first visit for antenatal care .
<i>Data Element Concept:</i>	Pregnancy – estimated duration

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Number
<i>Format:</i>	N[N]
<i>Maximum character length:</i>	2
<i>Supplementary values:</i>	Value Meaning
	99 Not stated/unknown
<i>Unit of measure:</i>	Completed weeks

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>The day of the first visit for antenatal care is the day of the first contact with a midwife, medical practitioner, or other recognised health professional where antenatal care was provided. It does not include a contact if it was to confirm the pregnancy only or those contacts that occurred during the pregnancy that related to other non pregnancy related issues. It does not include a first contact after the onset of labour.</p> <p>Antenatal care visits are attributed to the pregnant woman. The duration of the pregnancy on that day is the same as the gestational age of the fetus or baby on that day.</p>
<i>Collection methods:</i>	<p>To be collected at any time during the pregnancy or birth episode after the best estimate of gestational age has been determined.</p> <p>The method of data collection will usually be from health records of pregnancy and/or birth.</p> <p>The valid range of completed weeks for Pregnancy duration at the first visit for antenatal care is 3-46.</p>

<i>Guide for use:</i>	<p>CODE 1 Patient has no previous admission(s) or service contact(s) for the specialised treatment now being provided</p> <p>Use this code for admitted patients, whose only prior specialised treatment contact was the service contact that referred the patient for admission.</p> <p>CODES 2-4 These codes include patients who have been seen at any time in the past within the speciality within which the patient is currently being treated (mental health or palliative care), regardless of whether it was part of the current episode or a previous admission/service contact many years in the past. Use these codes regardless of whether the previous treatment was</p>
-----------------------	--

provided within the service in which the person is now being treated, or another equivalent specialised service (either institutional or community-based).

CODE 2 Patient has previous hospital admission(s) but no service contact(s) for the specialised treatment now being provided

CODE 3 Patient has previous service contact(s) but no hospital admission(s) for the specialised treatment now being provided

CODE 4 Patient has both previous hospital admission(s) and service contact(s) for the specialised treatment now being provided

Data element attributes

Collection and usage attributes

Comments: This metadata item was originally developed in the context of mental health institutional care data development (originally metadata item Problem status and later First admission for psychiatric treatment). More recent data development work, particularly in the area of palliative care, led to the need for this item to be re-worded in more generic terms for inclusion in other data sets.

For palliative care, the value of this data element is in its use in enabling approximate identification of the number of new palliative care patients receiving specialised treatment. The use of this data element in this way would be improved by the reporting of this data by community-based services.

<i>Maximum character length:</i>	6

Collection and usage attributes

<i>Guide for use:</i>	<p>Report the primary site of cancer, if known, for patients who have been diagnosed with a cancer.</p> <p>In ICDO, primary site is identified using both the Cxx.x code identifying site and the behaviour code to identify whether the site is the primary site. The behaviour code numbers used in ICDO are listed below:</p> <p>0 Benign</p> <p>1 Uncertain whether benign or malignant</p> <ul style="list-style-type: none">• borderline malignancy• low malignant potential <p>2 Carcinoma in situ</p> <ul style="list-style-type: none">• intraepithelial• non-infiltrating• non-invasive <p>3 Malignant, primary site</p> <p>6 Malignant, metastatic site</p> <ul style="list-style-type: none">• malignant, secondary site <p>9 Malignant, uncertain whether primary or metastatic site</p>
-----------------------	--

Data element attributes

Collection and usage attributes

Guide for use:

For cancer registries, collection of this data item should only be from notification and pathology reports relating to initial diagnosis and not for recurrent or metastatic disease.

If the primary site differs on multiple pathology or other notification reports for the same tumour, use the most specific value.

For multifocal tumours with foci in more than one quadrant, use the quadrant of the largest focus.

Collection methods:

Cancer registries use Site codes from ICDO 3rd edition.

Principal diagnosis

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Episode of care – principal diagnosis, code (ICD-10-AM 7th edn) ANN{.N[N]}
<i>METeOR identifier:</i>	391326
<i>Registration status:</i>	Health, Standard 22/12/2009
<i>Definition:</i>	The diagnosis established after study to be chiefly responsible for occasioning an episode of admitted patient care, an episode of residential care or an attendance at the health care establishment, as represented by a code.
Data Element Concept:	Episode of care – principal diagnosis

Value domain attributes

Representational attributes

<i>Classification scheme:</i>	International Statistical Classification of Diseases and Related Health Problems, Tenth Revision, Australian Modification 7th edition
<i>Representation class:</i>	Code
<i>Data type:</i>	String
<i>Format:</i>	ANN{.N[N]}
<i>Maximum character length:</i>	6

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>The principal diagnosis must be determined in accordance with the Australian Coding Standards. Each episode of admitted patient care must have a principal diagnosis and may have additional diagnoses. The diagnosis can include a disease, condition, injury, poisoning, sign, symptom, abnormal finding, complaint, or other factor influencing health status.</p> <p>As a minimum requirement the Principal diagnosis code must be a valid code from the current edition of ICD-10-AM.</p> <p>For episodes of admitted patient care, some diagnosis codes are too imprecise or inappropriate to be acceptable as a principal diagnosis and will group to an error DRG in the Australian Refined Diagnosis Related Groups.</p> <p>Diagnosis codes starting with a V, W, X or Y, describing the circumstances that cause an injury, rather than the nature of the injury, cannot be used as principal diagnosis. Diagnosis codes which are morphology codes cannot be used as principal diagnosis.</p>
-----------------------	---

Collection methods: A principal diagnosis should be recorded and coded upon **separation**, for each episode of admitted patient care or episode of residential care or attendance at a health care establishment. The principal diagnosis is derived from and must be substantiated by clinical documentation.

Comments: The principal diagnosis is one of the most valuable health data elements. It is used for epidemiological research, casemix studies and planning purposes.

Principal drug of concern

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Episode of treatment for alcohol and other drugs – drug of concern (principal), code (ASCDC 2000 extended) NNNN
<i>METeOR identifier:</i>	270109
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The main drug, as stated by the client, that has led a person to seek treatment from the service, as represented by a code.
<i>Context:</i>	Required as an indicator of the client's treatment needs.
<i>Data Element Concept:</i>	Episode of treatment for alcohol and other drugs – drug of concern

Value domain attributes

Representational attributes

<i>Classification scheme:</i>	Australian Standard Classification of Drugs of Concern 2000	
<i>Representation class:</i>	Code	
<i>Data type:</i>	String	
<i>Format:</i>	NNNN	
<i>Maximum character length:</i>	4	
<i>Supplementary values:</i>	Value	Meaning
	0005	Opioid analgesics not further defined
	0006	Psychostimulants not further defined

Collection and usage attributes

<i>Guide for use:</i>	<p>The Australian Standard Classification of Drugs of Concern (ASCDC) provides a number of supplementary codes that have specific uses and these are detailed within the ASCDC e.g. 0000 = inadequately described.</p> <p>Other supplementary codes that are not already specified in the ASCDC may be used in National Minimum Data Sets (NMDS) when required. In the Alcohol and other drug treatment service NMDS, two additional supplementary codes have been created which enable a finer level of detail to be captured:</p> <p>CODE 0005 Opioid analgesics not further defined</p> <p>This code is to be used when it is known that the client's principal drug of concern is an opioid but the specific opioid used is not known. The existing code 1000 combines opioid analgesics and non-opioid analgesics together into Analgesics nfd and the finer level of detail, although known, is lost.</p> <p>CODE 0006 Psychostimulants not further defined</p> <p>This code is to be used when it is known that the client's principal drug of concern is a psychostimulant but not which</p>
-----------------------	--

type. The existing code 3000 combines stimulants and hallucinogens together into Stimulants and hallucinogens nfd and the finer level of detail, although known, is lost.

Psychostimulants refer to the types of drugs that would normally be coded to 3100-3199, 3300-3399 and 3400-3499 categories plus 3903 and 3905.

Data element attributes

Collection and usage attributes

Guide for use:

The principal drug of concern should be the main drug of concern to the client and is the focus of the client's treatment episode. If the client has been referred into treatment and does not nominate a drug of concern, then the drug involved in the client's referral should be chosen.

Collection methods:

To be collected on commencement of the treatment episode.

For clients whose treatment episode is related to the alcohol and other drug use of another person, this metadata item should not be collected.

<i>Guide for use:</i>	<p>CODE 0 Not applicable (persons under 5 years of age or who speak only English)</p> <p>Not applicable, is to be used for people under 5 year of age and people who speak only English.</p> <p>CODE 9 Not stated/inadequately described</p> <p>Not stated/inadequately described, is not to be used on primary collection forms. It is primarily for use in administrative collections when transferring data from data sets where the item has not been collected.</p>
<i>Comments:</i>	The ABS advises that the most useful information provided by this metadata item is in the distinction between the two category groups of Very well/Well and Not well/Not at all.

Source and reference attributes

Reference documents: Standards for Statistics on Cultural and Language Diversity 1999.
Cat. no. 1289.0. Canberra: ABS.

Data element attributes

Collection and usage attributes

Collection methods: This metadata item is only intended to be collected if a person has a main language other than English spoken at home; and/or first language spoken is not English.

Recommended question:
How well do you speak English? (tick one)

1. Very well
2. Well
3. Not well
4. Not at all

Generally this would be a self-reported question, but in some circumstances (particularly where a person does not speak English well) assistance will be required in answering this question. It is important that the person's self-assessed proficiency in spoken English be recorded wherever possible. This metadata item does not purport to be a technical assessment of proficiency but is a self-assessment in the four broad categories outlined above.

This metadata item is not relevant to and should not be collected for persons under the age of five years.

While agencies are encouraged to use the recommended question described above, it is acknowledged that this is not always possible in practice. For example, where the data collection is a by-product of the provision of a health or community service, the information may be ascertained using different means. However, this standard should be used wherever practically possible.

Comments: This metadata item identifies those people who may suffer disadvantage in terms of their ability to access services due to lack of ability in the spoken English language. This information can be used to target the provision of services to people whose lack of ability in spoken English is potentially a barrier to gaining access to government programs and services.

In conjunction with Indigenous status, the main language other than English spoken at home and the country of birth, this metadata item forms the minimum core set of cultural and language indicators recommended by the Australian Bureau of Statistics.

Collection and usage attributes

<i>Guide for use:</i>	<p>CODE 1 Negative for protein Negative for proteinuria - less than 1 plus on dipstick-testing or excretion of 300 mg or less of protein from 24-hour urine collection.</p> <p>CODE 1.1 Microalbuminuria present Microalbuminuria present</p> <p>CODE 1.2 Microalbuminuria not present Microalbuminuria not present</p> <p>CODE 1.3 Microalbuminuria not tested Microalbuminuria not tested</p> <p>CODE 2 Proteinuria Proteinuria - one or more pluses of protein in dipstick urinalysis or for a 24-hour urine collection, where the patient excretes more than 300 mg/per day of protein.</p>
-----------------------	---

CODE 3 Not tested

Not tested - no urinalysis for proteinuria was taken.

Collection methods:

Where laboratory testing is used to determine Proteinuria status the categorisation must be substantiated by clinical documentation such as an official laboratory report.

Data element attributes

Collection and usage attributes

Collection methods:

Dipstick testing can be used to test for protein in a urine specimen. Proteinuria (i.e. excessive protein in the urine) on dipstick urinalysis is described as one or more pluses of protein and for a 24-hour urine collection where the patient excretes more than 300 mg/day of protein.

Microalbuminuria can be determining using any one of the following tests: spot urine, timed urine (24-hour collection) or albumin/creatinine ratio. Although the presence of microalbuminuria does not warrant categorisation as proteinuria, it is clinically significant in the diagnosis and treatment of diabetes.

Comments:

In settings where the monitoring of a person's health is ongoing and where a measure can change over time (such as general practice), the Patient – diagnosis date, DDMMYYYY should be recorded.

 (ANZSCO code 252712)
 Surgeon (general) (ANZSCO code 253511)
 Therapy aide (ANZSCO code 423314)

Collection methods:

Data is collected at the time a health care provider identification record is created.

Multiple instances of health care occupation may be collected where the individual provides a significant amount of services in more than one category. For example, a dentist who is also a medical practitioner may practice as both.

Record as many as apply.

Accurate data are best achieved using computer assisted coding. A computer assisted coding system is available from the ABS to assist in coding occupational data to ANZSCO codes.

Data coded at the 4-digit and 6-digit level will provide more detailed information than that collected at the higher levels and may be more useful. However, the level at which data are coded and reported will depend on the purpose of collecting this information.

Comments:

ANZSCO defines 'occupation' as 'a set of jobs with similar sets of tasks'. Operationally this is defined as 'a collection of jobs which are sufficiently similar in their main tasks to be grouped together for purposes of the classification'. Job is defined as 'a set of tasks designed to be performed by one individual for a wage or salary'.

<i>Guide for use:</i>	<p>Expenses relating to purchases of goods and services are to be reported in millions to the nearest 100,000 e.g. \$4,064,000 should be reported as \$4.1 million.</p> <p>When revenue from transactions are offset against expenses from transactions, the result equates to the net operating balance in accordance with Australian Accounting Standards Board 1049 (September 2006).</p> <p>Includes:</p> <ul style="list-style-type: none">• administrative expenses (excluding workers compensation premiums and payouts)• domestic services• drug supplies• food supplies• grants• medical and surgical supplies• patient transport• payments to visiting medical officers
-----------------------	--

- repairs and maintenance
- social benefits
- subsidy expenses
- other expenses (includes contracted care services purchased from private hospitals)

Collection methods:

Data are collected and nationally collated for the reporting period - the financial year ending 30th June each year.

In accounting terms, expenses are consumptions or losses of future economic benefits in the form of reductions in assets or increases in liabilities of the entity (other than those relating to distributions to owners) that result in a decrease in equity or net worth during the reporting period.

Expenses relating to purchases of goods and services are to be reported for the *Health industry relevant organisation type* and *Type of health and health related functions* data elements.

Health industry relevant organisation type

State and territory health authorities are **NOT** to report the following codes:

Codes 106-109; 111; 115-119; 123; 201 and 203

Type of health and health related functions

State and territory health authorities are **NOT** to report the following codes:

Codes 199; 299; 303-305; 307; 499; 503-504; 599; 601-603; 688; 699

Comments:

In accounting terms, expenses are consumptions or losses of future economic benefits in the form of reductions in assets or increases in liabilities of the entity (other than those relating to distributions to owners) that result in a decrease in equity or net worth during the reporting period.

Collection and usage attributes

<i>Collection methods:</i>	If codes 1, 2, 3 or 9 are used, the amount of radiation received should also be collected. Most external beam radiotherapy is delivered on an outpatient basis. CODE 2 Brachytherapy (radioactive implants) This code is likely to be listed as a procedure for admitted patients.

Collection and usage attributes

<i>Guide for use:</i>	To be collected on cessation of a treatment episode. Codes 1 to 12
-----------------------	--

listed above are set out as follows to enable a clearer picture of which codes are to be used for what purpose:

Treatment completed as planned:

CODE 1 Treatment completed

Client ceased to participate:

CODE 6 Ceased to participate against advice

CODE 7 Ceased to participate without notice

CODE 8 Ceased to participate involuntary (non-compliance)

CODE 9 Ceased to participate at expiation

Ceased to participate at expiation:

CODE 11 Drug court and /or sanctioned by court diversion service

CODE 12 Imprisoned, other than drug court sanctioned

Treatment not completed (other):

CODE 2 Change in main treatment type

CODE 3 Change in the delivery setting

CODE 4 Change in the principal drug of concern

CODE 5 Transferred to another service provider

Treatment ceased by mutual agreement:

CODE 10 Ceased to participate by mutual agreement

CODE 1 Treatment completed

This code is to be used when all of the immediate goals of the treatment have been completed as planned. Includes situations where the client, after completing this treatment, either does not commence any new treatment, commences a new treatment episode with a different main treatment or principal drug, or is referred to a different service provider for further treatment.

CODE 2 Change in main treatment type

A treatment episode will end if, prior to the completion of the existing treatment, there is a change in the main treatment type for alcohol and other drugs. See also Code 10.

CODE 3 Change in the delivery setting

A treatment episode may end if, prior to the completion of the existing treatment, there is a change in the treatment delivery setting for alcohol and other drugs. See also Code 10 and the Guide for use section in metadata item Episode of treatment for alcohol and other drugs.

CODE 4 Change in the principal drug of concern

A treatment episode will end if, prior to the completion of the existing treatment, there is a change in the principal drug of concern. See also Code 10.

CODE 5 Transferred to another service provider

This code includes situations where the service provider is no longer the most appropriate and the client is transferred/referred to another service. For example, transfers could occur for clients between non-residential and residential services or between

residential services and a hospital. Excludes situations where the original treatment was completed before the client transferred to a different provider for other treatment (use Code 1).

CODE 6 Ceased to participate against advice

This code refers to situations where the service provider is aware of the client's intention to stop participating in treatment, and the client ceases despite advice from staff that such action is against the client's best interest.

CODE 7 Ceased to participate without notice

This code refers to situations where the client ceased to receive treatment without notifying the service provider of their intention to no longer participate.

CODE 8 Ceased to participate involuntary (non-compliance)

This code refers to situations where the client's participation has been ceased by the service provider due to non-compliance with the rules or conditions of the program.

CODE 9 Ceased to participate at expiation

This code refers to situations where the client has fulfilled their obligation to satisfy expiation requirements (e.g. participate in a treatment program to avoid having a criminal conviction being recorded against them) as part of a police or court diversion scheme and chooses not to continue with further treatment.

CODE 10 Ceased to participate by mutual agreement

This code refers to situations where the client ceases participation by mutual agreement with the service provider even though the treatment plan has not been completed. This may include situations where the client has moved out of the area. Only to be used when Code 2, 3 or 4 is not applicable.

CODE 11 Drug court and/or sanctioned by court diversion service

This code applies to drug court and/or court diversion service clients who are sanctioned back into jail for non-compliance with the program.

CODE 12 Imprisoned, other than drug court sanctioned

This code applies to clients who are imprisoned for reasons other than Code 11.

Data element attributes

Collection and usage attributes

Comments:

Given the levels of attrition within alcohol and other drug treatment programs, it is important to identify the range of different reasons for ceasing treatment with a service.

<i>Supplementary values:</i>																					

Collection and usage attributes

<i>Guide for use:</i>	<p>CODE 1 ST-segment-elevation myocardial infarction</p> <p>This code is used when the reason for admission is persistent ST elevation of ≥ 1mm in two contiguous limb leads, or ST elevation of ≥ 2mm in two contiguous chest leads, or with new left bundle-branch block (BBB) pattern on the ECG.</p> <p>CODE 2 Non-ST-segment-elevation ACS with high-risk features</p> <p>This code is used when the reason for admission is clinical</p>
-----------------------	--

features consistent with an acute coronary syndrome with high-risk features which include any of the following:

- repetitive or prolonged (> 10 minutes) ongoing chest pain or discomfort;
- elevated level of at least one cardiac biomarker (troponin or creatine kinase-MB isoenzyme);
- persistent or dynamic ECG changes of ST segment depression $\geq 0.5\text{mm}$ or new T wave $\geq 2\text{mm}$;
- transient ST-segment elevation ($\geq 0.5\text{ mm}$) in more than 2 contiguous leads;
- haemodynamic compromise: Blood pressure < 90 mmHg systolic, cool peripheries, diaphoresis, Killip Class > 1, and/or new onset mitral regurgitation;
- sustained ventricular tachycardia;
- syncope;
- left ventricular systolic dysfunction (left ventricular ejection fraction < 0.40);
- prior percutaneous coronary intervention within 6 months or prior coronary artery bypass surgery;
- presence of known diabetes (with typical symptoms of ACS); or
- chronic kidney disease (estimated glomerular filtration rate < 60mL/minute) (with typical symptoms of ACS).

CODE 3 Non-ST-segment-elevation ACS with intermediate-risk features

This code is used when the reason for admission is clinical features consistent with an acute coronary syndrome and any of the following intermediate-risk features AND NOT meeting the criteria for high-risk ACS:

- chest pain or discomfort within the past 48 hours that occurred at rest, or was repetitive or prolonged (but currently resolved);
- age greater than 65yrs;
- known coronary heart disease: prior myocardial infarction with left ventricular ejection fraction ≥ 0.40 , or known coronary lesion more than >50% stenosed;
- no high-risk changes on electrocardiography (see high-risk features);
- two or more of the following risk factors: of known hypertension, family history, active smoking or hyperlipidaemia;
- presence of known diabetes (with atypical symptoms of ACS);
- chronic kidney disease (estimated glomerular filtration rate < 60mL/minute) (with atypical symptoms of ACS); or
- prior aspirin use.

CODE 4 Non-ST-segment-elevation ACS with low-risk features

This code is used when the reason for admission is clinical features consistent with an acute coronary syndrome without intermediate or high-risk features of non-ST-segment-elevation ACS. This includes onset of anginal symptoms within the last month, or worsening in severity or frequency of angina, or lowering of anginal threshold.

CODE 5 Percutaneous coronary intervention (PCI)

This code is used when the reason for admission is for a PCI, where the PCI is not immediately precipitated by a recurrent ischaemic event. If a recurrent ischaemic event precipitates a readmission with an associated PCI undertaken, one of codes 1-4 should be coded.

CODE 6 Coronary artery bypass graft (CABG)

This code is used when the reason for admission is for a CABG, where the CABG is not immediately precipitated by a recurrent ischaemic event. If a recurrent ischaemic event precipitates a readmission with an associated CABG undertaken, one of codes 1-4 should be coded.

CODE 7 Heart failure (without MI)

This code is used when the reason for admission is for the treatment of heart failure, where heart failure is not immediately precipitated by a recurrent ischaemic event. If a recurrent ischaemic event precipitates a readmission, one of codes 1-4 should be coded.

CODE 8 Arrhythmia (without MI)

This code is used when the reason for admission is for the treatment of an arrhythmia, where the arrhythmia is not immediately precipitated by a recurrent ischaemic event. If a recurrent ischaemic event precipitates a readmission, one of codes 1-4 should be coded.

Data element attributes

Collection and usage attributes

Guide for use:

To determine if this item should be collected ask the person being admitted if they have been discharged from an episode of admitted patient care for acute coronary syndrome within the last 28 days.

Comments:

This metadata item is designed to identify recurrent admissions following an initial presentation with acute coronary syndromes (ACS), not necessarily to the hospital responsible for the index admission.

<i>Supplementary values:</i>																	

Collection and usage attributes

<i>Guide for use:</i>	<p>CODE 1 Admitted as an elective patient for awaited procedure in this hospital or another hospital</p> <p>Patients undergoing the awaited procedure whilst admitted for another reason are to be coded this code.</p> <p>CODE 2 Admitted as an emergency patient for awaited procedure in this hospital or another hospital</p> <p>This code identifies patients who were admitted ahead of their normal position in the queue because the condition requiring treatment deteriorated whilst waiting. Admission as an</p>
-----------------------	---

emergency patient could also be due to other causes such as inappropriate urgency rating, delays in the system, or unpredicted biological variation.

CODES 3 - 5

CODE 3 Could not be contacted (includes patients who have died while waiting whether or not the cause of death was related to the condition requiring treatment)

CODE 4 Treated elsewhere for awaited procedure, but not as a patient of this hospital's waiting list

CODE 5 Surgery not required or declined

These codes provide an indication of the amount of clerical audit of the waiting lists. Code 4 gives an indication of patients treated other than as a patient of the hospital's waiting list. The awaited procedure may have been performed as an emergency or as an elective procedure.

CODE 6 Transferred to another hospital's waiting list

This code identifies patients who were transferred from one hospital's elective surgery waiting list to that of another hospital. The waiting time on the waiting lists at the initial hospital and subsequent hospitals should be combined for national reporting.

CODE 9 Not known

This code identifies patients removed from the waiting list for reasons unknown.

<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	To be provided at the state level. Expenditures relating to central health administration, research and planning for central and regional offices of State, Territory and Commonwealth health authorities and related departments (e.g. the Department of Veterans' Affairs). Record values up to hundreds of millions of dollars. Rounded to the nearest whole dollar.
<i>Comments:</i>	Resources Working Party members were concerned about the possibility of double-counting of programs at the hospital and again at the state level and were also concerned at the lack of uniformity between states. Where possible expenditure relating to programs operated by hospitals should be at the hospital level.

Recurrent expenditure (mental health)—non-salary operating costs

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment (mental health) – recurrent expenditure (non-salary operating costs) (financial year), total Australian currency N[N(8)]
<i>Synonymous names:</i>	Non-salary operating costs excluding depreciation
<i>METeOR identifier:</i>	287979
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	Total expenditure by a mental health establishment relating to non-salary operating items.
Data Element Concept:	Establishment – recurrent expenditure (non-salary operating costs)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>Report all expenditure in thousands of dollars (i.e. \$000s). Expenditure should include both the specific costs directly associated with the service and indirect costs, for example personnel services.</p> <p>Research and academic units that function as an integral part of ambulatory care should be reported against the appropriate service.</p> <p>Depreciation is to be excluded from the non-salary operating costs.</p>
<i>Collection methods:</i>	<p>Non-salary recurrent expenditure, excluding depreciation, is to be reported by service setting (admitted patient care, residential care, ambulatory care).</p> <p>For the admitted patient care setting non-salary recurrent expenditure, excluding depreciation, is to be disaggregated by specialised mental health service program type and specialised mental health service target population, together.</p> <p>The sub-components of non-salary recurrent expenditure, and</p>

depreciation, are to be reported at the organisation level for the Mental health establishments NMDS. However, if the organisation is not reporting on an accrual basis then it does not need to report depreciation.

<i>METeOR identifier:</i>	296531
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	Salary and wage payments to carer consultants of an establishment, for a financial year.
Data Element Concept:	Establishment – recurrent expenditure (salaries and wages)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Carer consultants are persons employed (or engaged via contract) on a part-time or full-time paid basis to represent the interests of carers and advocate for their needs. This implies the person received a salary or contract fee on a regular basis. It does not refer to arrangements where the carer only received reimbursements of expenses or occasional sitting fees for attendance at meetings.
<i>Collection methods:</i>	Note: This code is only to be reported for the Mental Health Establishments NMDS. For Public hospital establishments NMDS data are to be reported in a category according to specific state and territory arrangements.

Recurrent expenditure (salaries and wages)—consumer consultants

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – recurrent expenditure (salaries and wages) (consumer consultants) (financial year), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	296528
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	Salary and wage payments to consumer consultants of an establishment, for a financial year.
Data Element Concept:	Establishment – recurrent expenditure (salaries and wages)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Consumer consultants are persons employed (or engaged via contract) on a part-time or full-time paid basis to represent the interests of consumers and advocate for their needs. This implies the person received a salary or contract fee on a regular basis. It does not refer to arrangements where the consumer only received reimbursements of expenses or occasional sitting fees for attendance at meetings.
<i>Collection methods:</i>	Note: This code is only to be reported for the Mental Health Establishments NMDS. For Public hospital establishments NMDS data are to be reported in a category according to specific state and territory arrangements.

Recurrent expenditure—Department of Veterans' Affairs funded

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – recurrent expenditure (Department of Veterans' Affairs funded), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	377992
<i>Registration status:</i>	Health, Standard 02/12/2009
<i>Definition:</i>	Total recurrent expenditure measured in Australian dollars funded by block grants or activity payments provided by the Department of Veterans' Affairs (DVA) for provision of mental health services and payments made for mental health treatment and care of DVA clients.
Data Element Concept:	Establishment – recurrent expenditure (Department of Veterans' Affairs funded)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Australian dollars. Rounded to nearest whole dollar.
<i>Collection methods:</i>	DVA-funded expenditure to be reported only once and for the specific statistical unit level at which the expenditure is available. Where DVA-funded expenditure could be allocated to more than one level it is important to allocate it to the single most appropriate statistical unit level to avoid the possibility of counting the expended funds more than once. For example, funding provided for service delivery expenditure should be reported at the lowest statistical unit level possible only.

Recurrent expenditure—State or Territory health authority funded

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – recurrent expenditure (state or territory health authority funded), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	288965
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	The total recurrent expenditure from funds provided by the State or Territory health authority which were used to support the delivery and/or administration of mental health services reported by the organisation, region or central administration.
Data Element Concept:	Establishment – recurrent expenditure (state or territory health authority funded)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Australian dollars. Rounded to nearest whole dollar. Includes specific mental health allocations as well as health funds appropriated for general or other specific purpose.
<i>Collection methods:</i>	State or Territory health authority-funded expenditure to be reported only once and for the specific statistical unit level at which the expenditure actually occurred e.g. at the state, regional or organisational level. Where State or Territory health authority-funded expenditure could be allocated to more than one level it is important to allocate it to the single most appropriate statistical unit level to avoid the possible of counting the expended funds more than once. For example, funding provided for service delivery expenditure should be reported at the lowest statistical unit level possible only.

Recurrent expenditure—depreciation

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – recurrent expenditure (depreciation) (financial year), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	270279
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Depreciation charges measured in Australian dollars for a financial year.
Data Element Concept:	Establishment – recurrent expenditure (depreciation)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Record values up to hundreds of millions of dollars. Rounded to the nearest whole dollar. Depreciation is to be reported by service setting (admitted patient care, residential care, ambulatory care). For admitted patient care settings, depreciation is to be disaggregated by specialised mental health service program type and specialised mental health service target population, together.
<i>Comments:</i>	With the long-term trend towards accrual accounting in the public sector, this metadata item will ultimately become significant for public sector establishments. Public sector establishments in some states have adopted modified accrual accounting identifying depreciation only, before reaching full accrual accounting. Depreciation is now reported for most public sector establishments and should be reported as a separate recurrent expenditure. Depreciation should be identified separately from other recurrent expenditure categories.

Source and reference attributes

Recurrent expenditure—domestic services

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – recurrent expenditure (domestic services) (financial year), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	270283
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The costs measured in Australian dollars of all domestic services including electricity, other fuel and power, domestic services for staff, accommodation and kitchen expenses but not including salaries and wages, food costs or equipment replacement and repair costs, for a financial year.
Data Element Concept:	Establishment – recurrent expenditure (domestic services)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Record values up to hundreds of millions of dollars. Rounded to the nearest whole dollar. Gross expenditure should be reported with no revenue offsets, except for inter-hospital transfers.
<i>Comments:</i>	The possibility of separating fuel, light and power from domestic services which would bring the overall non-salary recurrent expenditure categories closer to the old Hospitals and Allied Services Advisory Council categories was briefly considered by the Resources Working Party but members did not hold strong views in this area.

Recurrent expenditure—interest payments

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – recurrent expenditure (interest payments) (financial year), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	270186
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Payments in Australian dollars made by or on behalf of the establishment in respect of borrowings (e.g. interest on bank overdraft) provided the establishment is permitted to borrow, for a financial year.
Data Element Concept:	Establishment – recurrent expenditure (interest payments)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Record values up to hundreds of millions of dollars. Rounded to nearest whole dollar.
<i>Comments:</i>	The item would not have been retained if the data set was restricted to the public sector. In some States, public hospitals may not be permitted to borrow funds or it may be entirely a State treasury matter, not identifiable by the health authority. Even where public sector establishment borrowings might be identified, this appears to be a sensitive area and also of less overall significance than in the private sector.

Recurrent expenditure—non-salary operating costs (excluding depreciation)

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment (community mental health) – recurrent expenditure (non-salary operating costs) (financial year), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	270297
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Total expenditure relating to non-salary operating items, for a financial year.
Data Element Concept:	Establishment – recurrent expenditure (non-salary operating costs)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Record values up to hundreds of millions of dollars. Rounded to the nearest whole dollar. Total is calculated from expenditure including: <ul style="list-style-type: none">• Payments to visiting medical officers• Superannuation employer contributions (including funding basis)• Drug supplies• Medical and surgical supplies• Food supplies• Domestic services• Repairs and maintenance• Patient transport• Administrative expenses• Interest payments• Depreciation
-----------------------	---

- Other recurrent expenditure.

Expenditure should include both the specific costs directly associated with the service and indirect costs for example personnel services.

Research and academic units that function as an integral part of ambulatory care should be reported against the appropriate service.

Recurrent expenditure—other revenue funded

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – recurrent expenditure (other revenue funded expenditure), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	288071
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	The total recurrent expenditure funded from all other revenue that was received by the organisation, region and central administration and has not been reported elsewhere.
Data Element Concept:	Establishment – recurrent expenditure (other revenue funded expenditure)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Australian dollars. Rounded to nearest whole dollar.
<i>Collection methods:</i>	Expenditure funded from all other revenue, excluding those reported separately, to be reported only once and for the specific statistical unit level at which the expenditure actually occurred e.g. at the State, regional or organisational level. Expenditure reported separately are listed below under the Relational attributes section.

Recurrent expenditure—payments to visiting medical officers

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – recurrent expenditure (visiting medical officer payments) (financial year), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	270049
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	All payments measured in Australian dollars made by an institutional health care establishment to visiting medical officers for medical services provided to hospital (public) patients on an honorary, sessionally paid, or fee for service basis, for a financial year.
Data Element Concept:	Establishment – recurrent expenditure (visiting medical officer payments)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Record as currency up to hundreds of millions of dollars. Rounded to nearest whole dollar.
<i>Comments:</i>	Although accepting the need to include visiting medical officer payments, the Resources Working Party decided not to include data on visiting medical officer services (whether hours or number of sessions or number of services provided) due to collection difficulties and the perception that use of visiting medical officers was purely a hospital management issue.

Recurrent expenditure—recoveries funded

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – recurrent expenditure (recoveries funded expenditure), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	288685
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	Recurrent expenditure funded from revenue that is in the nature of a recovery of expenditure incurred, including income from provision of meals and accommodation, use of facilities, etc. for a financial year.
Data Element Concept:	Establishment – recurrent expenditure (recoveries funded expenditure)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Australian dollars. Rounded to nearest whole dollar.
<i>Collection methods:</i>	Expenditure funded from recoveries to be reported only once and for the specific statistical unit level at which the expenditure actually occurred e.g. at the state, regional or organisational level. Where expenditure funded from recoveries could be allocated to more than one level it is important to allocate it to the single most appropriate statistical unit level to avoid the possible of counting the expended funds more than once. For example, recoveries received through service delivery expenditure should be reported at the lowest statistical unit level possible only.

Recurrent expenditure—superannuation employer contributions

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – recurrent expenditure (superannuation employer contributions) (financial year), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	270371
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Contributions paid in Australian dollars or (for an emerging cost scheme) that should be paid (as determined by an actuary) on behalf of establishment employees either by the establishment or a central administration such as a state health authority, to a superannuation fund providing retirement and related benefits to establishment employees, for a financial year.
Data Element Concept:	Establishment – recurrent expenditure (superannuation employer contributions)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Record as currency up to hundreds of millions of dollars. Rounded to nearest whole dollar.
<i>Comments:</i>	<p>The definition specifically excludes employee superannuation contributions (not a cost to the establishment) and superannuation final benefit payments.</p> <p>In private enterprise some superannuation schemes are partially funded but this is considered too complex a distinction for national minimum data sets.</p> <p>It is noted that the emergence of salary sacrifice schemes allows employees to forego salary for higher superannuation contributions. If these become significant, national minimum data sets may have to take them into account at a future stage.</p>

Collection and usage attributes

<i>Guide for use:</i>	Australian dollars. Rounded to nearest whole dollar. Total is calculated from expenditure including: salaries and wages; depreciation; and non-salary recurrent expenditure comprising: payments to visiting medical officers; superannuation employer contributions (including funding basis); drug supplies; medical and surgical supplies; food supplies; domestic services; repairs and maintenance; patient transport; administrative expenses; interest payments; and other recurrent expenditure.
<i>Collection methods:</i>	The total grant made to non-government residential mental health services and specialised mental health services provided by private hospitals that receive state or territory government funding. Can be reported as the total recurrent expenditure if detailed expenditure data are not available.

-----------------------	--

Collection methods:

Residual mental health expenditure is to be reported only at the level at which the expenditure occurred (state/territory, region or organisational), and should not be counted at more than one level. Expenditure should be reported for these categories, where applicable:

- Report academic expenditure in this section only where the academic unit operates independently. Where the academic unit or position operates as an integral part of the service (e.g. an acute inpatient unit), the expenditure should be reported for the relevant organisation.
- Where academic grants are paid directly by organisation, region or state/territory administration, these should be reported at that level.

Residual expenditure (mental health service)—program administration

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Specialised mental health service—residual expenditure (program administration), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	290145
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	Expenditure in Australian dollars by specialised mental health services that cannot be directly related to programs operated by a particular organisation or service unit (that is, can only be indirectly related to a particular organisation or service unit). It refers to costs of administration and other support services (such as program management, admissions reception office, medical records etc.) at the mental health program-level (i.e. at state or territory, region or organisation level). Generally, these are resources that are specifically dedicated to the mental health program, are under the direct management control of the program and are funded by the program.

Collection and usage attributes

<i>Guide for use:</i>	<p>Excludes grants to non-government organisations for services that are to be reported separately. These are grants for accommodation services, advocacy services, community awareness services, counselling services, independent living skills support services, pre-vocational training services, psychosocial support services, recreational services, respite services, self-help support group services and other unspecified services grants.</p> <p>Residual expenditures by specialised mental health services that cannot be directly related to programs operated by a particular organisation or service unit (that is, can only be indirectly related to a particular organisation or service unit).</p>
<i>Collection methods:</i>	Residual mental health expenditure is to be reported only at the level at which the expenditure occurred (state/territory, region or organisational), and should not be counted at more than one level. Expenditure should be reported for these categories, where applicable.

Report service development expenditure only where the service development operates independently and where that expenditure is not reported elsewhere. Where the service development activity occurs as an integral component of service delivery (e.g. in cases where the service is already reporting activity data), the expenditure should be reported under the relevant service unit.

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Establishment – revenue (recoveries) (financial year), total Australian currency N[N(8)]
<i>METeOR identifier:</i>	364805
<i>Registration status:</i>	Health, Standard 05/12/2007
<i>Definition:</i>	All revenue received in Australian dollars for a financial year, that is in the nature of a recovery of expenditure incurred.
Data Element Concept:	Establishment – revenue (recoveries)

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Currency
<i>Format:</i>	N[N(8)]
<i>Maximum character length:</i>	9
<i>Unit of measure:</i>	Australian currency (AU\$)

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Record as currency up to hundreds of millions of dollars. Rounded to nearest whole dollar. This metadata item relates to all revenue received by establishments except for general revenue payments received from state or territory governments.
<i>Comments:</i>	The Resources Working Party had considered splitting recoveries into staff meals and accommodation, and use of hospital facilities (private practice) and other recoveries. Some states had felt that use of facilities was too sensitive as a separate identifiable item in a national minimum data set. Additionally, it was considered that total recoveries was an adequate category for health financing analysis purposes at the national level.

Collection and usage attributes

<i>Guide for use:</i>	<p>This metadata item contributes to the definition of the concept 'Disability' and gives an indication of the experience of disability for a person.</p> <p>In the context of health, participation is involvement in a life situation. Participation restrictions are problems an individual may experience in involvement in life situations.</p> <p>This metadata item gives a rating of the person's degree of satisfaction with participation in a domain of life, in relation to their current life goals. Satisfaction with participation corresponds to the person's own perspective on their participation, and reflects their attitude to their participation in the various life areas. It is essentially a summary measure in</p>
-----------------------	---

which are embedded the concepts of choice, opportunity and importance.

CODE 0 High satisfaction with participation

Used if a person is involved in the specified life situation as he or she wishes to fulfil his or her current life goals in terms of duration, frequency, manner and outcome.

CODE 1 Moderate satisfaction with participation

Used if the person is reasonably satisfied with their participation in this life situation, in terms of duration, frequency, manner and outcome. This could occur if one of the criteria (duration, frequency, manner or outcome) is not fulfilled and that criterion is not critical to the person's goals. For example, the person does not participate in the specified life situation as frequently as wished, but the other criteria are met and the frequency is not so affected that it is critical to the person's satisfaction.

CODE 2 Neither satisfied nor dissatisfied with participation

Used if the person is neither satisfied nor dissatisfied with their participation in this life situation, in terms of duration, frequency, manner and outcome.

CODE 3 Moderate dissatisfaction with participation

Used if two or three criteria (duration, frequency, manner or outcome) are not fulfilled, but are not so badly affected, in relation to the person's goals in that life area, that the person is extremely dissatisfied. For example, a person is able to participate in work, but is placed in supported employment rather than employment in the open labour market. This is not in line with the person's goals, so that the manner and outcome of the participation are not fulfilled.

CODE 4 Extreme dissatisfaction with participation

Used when all criteria (duration, frequency, manner and outcome) are not fulfilled for the specified life situation, or where any of the criteria are so badly affected in relation to the person's goals that they consider themselves to be extremely dissatisfied with this life area. An example of the latter would arise when a person is extremely dissatisfied with participation in interpersonal activities because his/her goal in terms of duration of social visits is never fulfilled, although other criteria (frequency and manner) may be fulfilled.

CODE 5 Complete restriction and dissatisfaction

Used when the person does not participate in this life situation in line with his or her own goals, i.e. in an area where they wish to participate and is completely dissatisfied with not participating in this life situation.

CODE 9 Not applicable

Used when participation in a life situation is not relevant, such as employment of an infant or where there is no participation and the person has no desire to participate in this area. For example, a personal preference not to participate in specific areas of community, social and civic life such as sport or hobbies. The area may not be applicable to the person's current life goals.

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Episode of admitted patient care – separation date, DDMMYYYY
<i>METeOR identifier:</i>	270025
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Date on which an admitted patient completes an episode of care.
Data Element Concept:	Episode of admitted patient care – separation date

Value domain attributes

Representational attributes

<i>Representation class:</i>	Date
<i>Data type:</i>	Date/Time
<i>Format:</i>	DDMMYYYY
<i>Maximum character length:</i>	8

Data element attributes

Collection and usage attributes

<i>Comments:</i>	There may be variations amongst jurisdictions with respect to the recording of separation date. This most often occurs for patients who are statistically separated after a period of leave (and who do not return for further hospital care). In this case, some jurisdictions may record the separation date as the date of statistical separation (and record intervening days as leave days) while other jurisdictions may retrospectively separate patients on the first day of leave. Despite the variations in recording of separation date for this group of patients, the current practices provide for the accurate recording of length of stay.

Collection and usage attributes

<i>Guide for use:</i>	<p>CODE 1.1 On the hospital campus of the provider</p> <p>Patient and provider in the same physical location refers to face to face contacts. If this occurs at the hospital campus of the provider, use code 1.1.</p> <p>CODE 1.2 Not on the hospital campus of the provider</p> <p>If the service event does not occur on the hospital campus of the provider (hospital-based outreach services), use code 1.2.</p> <p>Hospital-based outreach service events occur when the patient is treated by hospital staff in a location that is not part of the hospital campus (such as in the patient's home or place of work).</p> <p>Patient and provider not in the same physical location refers to service events delivered via a telephone call or video link (telemedicine). The provider may or may not be physically present on their hospital campus.</p>
-----------------------	---

A service event delivered via a telephone call is included if

- it is a substitute for a face-to-face service event, and
- it is pre-arranged, and
- a record of the service event is included in the patient's medical record

A service event can be counted at each site participating via a video link.

Collection and usage attributes

<i>Guide for use:</i>	Diagnosis and procedure codes should be checked against the national ICD-10-AM sex edits, unless the person is undergoing, or has undergone a sex change or has a genetic condition resulting in a conflict between sex and ICD-10-AM code. CODE 3 Intersex or indeterminate Intersex or indeterminate, refers to a person, who because of a genetic condition, was born with reproductive organs or sex chromosomes that are not exclusively male or female or whose sex has not yet been determined for whatever reason. Intersex or indeterminate, should be confirmed if reported for people aged 90 days or greater.
<i>Comments:</i>	The definition for Intersex in Guide for use is sourced from the ACT Legislation (Gay, Lesbian and Transgender) Amendment Act 2003.

Data element attributes

Collection and usage attributes

Collection methods:

Operationally, sex is the distinction between male and female, as reported by a person or as determined by an interviewer.

When collecting data on sex by personal interview, asking the sex of the respondent is usually unnecessary and may be inappropriate, or even offensive. It is usually a simple matter to infer the sex of the respondent through observation, or from other cues such as the relationship of the person(s) accompanying the respondent, or first name. The interviewer may ask whether persons not present at the interview are male or female.

A person's sex may change during their lifetime as a result of procedures known alternatively as sex change, gender reassignment, transsexual surgery, transgender reassignment or sexual reassignment. Throughout this process, which may be over a considerable period of time, the person's sex could be recorded as either Male or Female.

In data collections that use the ICD-10-AM classification, where sex change is the reason for admission, diagnoses should include the appropriate ICD-10-AM code(s) that clearly identify that the person is undergoing such a process. This code(s) would also be applicable after the person has completed such a process, if they have a procedure involving an organ(s) specific to their previous sex (e.g. where the patient has prostate or ovarian cancer).

CODE 3 Intersex or indeterminate

Is normally used for babies for whom sex has not been determined for whatever reason.

Should not generally be used on data collection forms completed by the respondent.

Should only be used if the person or respondent volunteers that the person is intersex or where it otherwise becomes clear during the collection process that the individual is neither male nor female.

CODE 9 Not stated/inadequately described

Is not to be used on primary collection forms. It is primarily for use in administrative collections when transferring data from data sets where the item has not been collected.

Guide for use:

Public sector

CODE 101 Australian Health Care Agreements

This item is not currently required to be reported by state or territory health authorities.

Revenue received from the Australian Government Department of Health and Ageing under the Australian Health Care Agreements to assist in the cost of providing public patients with free access to public hospital services within a clinically appropriate time irrespective of where patients live.

CODE 102 Other Special Purpose Payments

This item is not currently required to be reported by state or territory health authorities.

Includes Specific Purpose Payments provided by the Australian Government to the states and territories such as:

- Public Health Outcomes Funding Agreement grants
- Highly Specialised Drugs grants
- National Radiotherapy grants
- National Mental Health Information Development grant
- Magnetic Resonance Imaging grants
- Postgraduate Medical Training grants
- Hepatitis C Education and Prevention grant
- Royal Flying Doctor Service grants

Excludes AHCA grants, Medicare or PBS/RPBS payments.

CODE 103 Medicare

This item is not currently required to be reported by state or territory health authorities.

Includes revenue received for services listed in the Medical Benefits Schedule that are provided by registered medical practitioners. Many medical services in Australia are provided on a fee-for-service basis and attract benefits or revenue from the Australian Government under Medicare.

Includes revenue received for medical services provided to private admitted patients in hospitals as well as some revenue that is not based on fee-for-service (i.e. alternative funding arrangements).

CODE 104 Pharmaceutical Benefits Scheme (PBS) and Repatriation Pharmaceuticals Benefits Scheme (RPBS)

Includes pharmaceuticals in the PBS and RPBS for which the Australian Government paid a benefit.

Excludes:

- revenue received for pharmaceuticals for which no PBS or RPBS benefit was paid;

- revenue received for other non-pharmaceutical medications;
- pharmaceuticals listed in the PBS or RPBS, the total costs of which are equal to, or less than, the statutory patient contribution for the class of patient concerned;
- medicines dispensed through private prescriptions that do not fulfil the criteria for payment under the PBS or RPBS; and
- over-the-counter medicines such as pharmacy-only medicines, aspirin, cough and cold medicines, vitamins and minerals, herbal and other complementary medicines, and a range of medical non-durables, such as bandages, band aids and condoms.

CODE 105 National Health and Medical Research Council

Includes health research funded by the National Health and Medical Research Council that is not reported elsewhere.

CODE 106 Department of Veterans' Affairs

Includes revenues received for health services provided to veterans, war widows and widowers with gold or white DVA cards. Types of services include public and private hospitals, local medical officers and specialists, residential aged care subsidy, allied health, rehabilitation appliances, dental services, community nursing, Veterans' Home Care and travel for treatment.

Excludes revenues received for pharmaceuticals provided to veterans, war widows and widowers with gold, white or orange DVA cards which are reported under code 104.

CODE 107 Other Australian Government Departments

Includes other revenues received for health services from, for example, the Department of Immigration and Citizenship and Department of Defence. Excludes Medicare payments from Medicare Australia (part of Department of Human Services) reported under code 103.

CODE 108 State/Territory non-health Departments

Includes correctional facilities, and departments that have contributed funding for the provision of a health service e.g. public health, emergency services, NSW Food Authority, NSW Health Care Complaints Commission, South Australia Ambulance Service, National Blood Authority, Red Cross, and prison health services such as WA Health services directorate and St Vincent's Correctional Health Service Victoria.

CODE 188 Other public sector revenue

Includes all public sector revenue other than those reported under codes 101 to 108. May include revenue from Local governments.

Private sector

CODE 201 Private health insurance

Includes revenue from businesses mainly engaged in providing insurance cover for hospital, medical, dental or pharmaceutical expenses or costs.

Excludes:

1. accident and sickness insurance

2. liability insurance
3. life insurance
4. general insurance
5. other insurance business excluded by the Private Health Insurance (Health Insurance Business) Rules
6. overseas visitors for whom travel insurance is the major funding source.

State and territory health authorities may report revenues for admitted patients, from private health insurance funds and private households, as a combined total if these revenues are not able to be reported separately.

CODE 202 Workers compensation insurance

Includes benefits paid under workers compensation insurance to the health industry relevant organisation for health care provided to workers, including trainees and apprentices, who have experienced a work-related injury. Type of benefits includes fees for medical or related treatment.

Excludes benefits paid under public liability, common law or medical negligence.

CODE 203 Motor vehicle third party insurance

Includes personal injury claims arising from motor accidents and compensation for accident victims and their families for injuries or death. Excludes benefits paid under workers compensation insurance, public liability, common law or medical negligence.

CODE 204 Other compensation (e.g. Public liability, common law, medical negligence).

This item is not currently required to be reported by state or territory health authorities.

Includes revenues received from:

- public liability insurance for injury arising from an incident related to the organisation's normal activities;
- a court-ordered settlement for damages because of negligence under specific conditions a duty of care exists and was breached and material damage resulted as a consequence;
- health professionals employed by health authorities or otherwise covered by health authority professional indemnity arrangements; and
- a common law settlement cancels all other entitlements to workers compensation benefits. If a common law claim is not successful, the worker will continue to receive workers compensation under the statutory scheme.

Excludes benefits paid under motor vehicle third party insurance.

CODE 205 Private households (self-funded and out-of-pocket expenditure)

Includes payments received from the patient, the patient's family or friends, or other benefactors (i.e. patient revenue).

Includes cost-sharing and informal payments to health care

providers. Cost-sharing is a provision of health insurance or third-party payment that requires the individual who is covered to pay part of the cost of health care received. This is distinct from the payment of a health insurance premium, contribution or tax which is paid whether health care is received or not.

Cost-sharing can be in the form of co-payments, co-insurance or deductibles:

- co-payment: cost-sharing in the form of a fixed amount to be paid for a service;
- co-insurance: cost-sharing in the form of a set proportion of the cost of a service; and
- deductibles: cost-sharing in the form of a fixed amount which must be paid for a service before any payment of benefits can take place.

CODE 206 Non-profit institutions serving households

Non-profit institutions serving households (NPISHs) (i.e. non-profit NGOs) consist of non-profit institutions which provide goods or services to households free or at prices that are not economically significant. Such NPISHs may provide health care goods or services on a non-market basis to households in need, including households affected by natural disasters or war.

The revenues received from such NPISHs are provided mainly by donations in cash or in kind from the general public, corporations or governments. These include organisations such as the National Heart Foundation, Diabetes Australia or the Cancer Council etc. Excludes non-profit institutions that are market producers of goods and services.

NOTE: This item is to be used for the reporting of revenues received from trusts or charities.

CODE 207 Corporations (other than health insurance)

This item is not currently required to be reported by state or territory health authorities.

Include revenues received from all corporations or quasi-corporations, whose principal activity is the production of market goods or services (other than health insurance). Included are all resident non-profit institutions that are market producers of goods or non-financial services. These include health or health-related organisations such as hospitals, pharmacies, medical and diagnostic laboratories, residential aged care facilities and providers of medical specialist services, and non-health organisations such as research organisations.

CODE 288 Other private sector revenue

Includes all private sector revenue other than those reported under codes 201 to 207.

CODE 301 Overseas

This item is not currently required to be reported by state or territory health authorities.

Includes funds provided from overseas countries for areas of health care such as research. Funds may be channelled through

government or non-government organisations or private institutions. Also includes overseas visitors receiving health care for whom travel insurance is the major funding source.

CODE 999 Not further defined

Includes all revenue that could be a combination of categories 101 to 108, 188, 201 to 207 and 288 but which could not be further disaggregated.

Data element attributes

Collection and usage attributes

Guide for use:

If there is an expected source of revenue followed by a finalised actual source of revenue (for example, in relation to compensation claims), then the actual revenue source known at the end of the reporting period should be recorded.

The expected revenue source should be reported if the fee has not been paid but is not to be waived.

<i>Guide for use:</i>	CODE 03 Medical practitioner Includes medical specialists, vocationally registered general practitioners, vocationally registered general practitioner trainees and other primary-care medical practitioners in private practice. CODE 04 Hospital Includes public and private hospitals, hospitals specialising in dental, ophthalmic aids and other specialised medical or surgical
-----------------------	--

care, satellite units managed and staffed by a hospital, emergency departments of hospitals, and mothercraft hospitals. Excludes psychiatric hospitals, psychiatric units and drug and alcohol units located within or operating from hospitals, and outpatient clinics (see codes 05-07).

CODE 05 Mental health care service

Includes both residential and non-residential services. Includes psychiatric hospitals and psychiatric units within and outside of hospitals.

CODE 06 Alcohol and other drug treatment service

Includes both residential and non-residential services. Includes drug and alcohol units within and outside of hospitals.

CODE 07 Other community/health care service

Includes outpatient clinics and aged care facilities.

CODE 09 Police diversion

This code should be used when a person detained for a minor drug offence is formally referred to treatment by the police in order to divert the offender from the criminal justice pathway.

CODE 10 Court diversion

This code refers to the diversion of an offender into drug education, assessment and treatment at the discretion of a magistrate. This may occur at the point of bail or prior to sentencing.

CODE 98 Other

Includes persons referred under a legislative act (other than Drug Diversion Act) e.g. *Mental Health Act*.

<i>Format:</i>	N	
<i>Maximum character length:</i>	1	
<i>Permissible values:</i>	Value	Meaning
	1	Acute care
	2	Other

Collection and usage attributes

<i>Guide for use:</i>	<p>The categorisation of the admitted patient program is based on the principal purpose(s) of the program rather than the classification of the individual patients.</p> <p>CODE 1 Acute care</p> <p>Programs primarily providing specialist psychiatric care for people with acute episodes of mental disorder. These episodes are characterised by recent onset of severe clinical symptoms of mental disorder that have potential for prolonged dysfunction or risk to self and/or others. The key characteristic of acute services is that this treatment effort is focused on short-term treatment. Acute services may be focused on assisting people who have had no prior contact or previous psychiatric history, or individuals with a continuing mental disorder for whom there has been an acute exacerbation of symptoms. This category applies only to services with a mental health service setting of overnight admitted patient care or residential care.</p> <p>CODE 2 Other</p> <p>Refers to all other programs primarily providing admitted patient care.</p> <p>Includes programs providing rehabilitation services that have a primary focus on intervention to reduce functional impairments</p>
-----------------------	--

that limit the independence of patients. Rehabilitation services are focused on disability and the promotion of personal recovery.

They are characterised by an expectation of substantial improvement over the short to mid-term. Patients treated by rehabilitation services usually have a relatively stable pattern of clinical symptoms.

Also includes programs providing extended care services that primarily provide care over an indefinite period for patients who have a stable but severe level of functional impairment and an inability to function independently, thus requiring extensive care and support. Patients of extended care services present a stable pattern of clinical symptoms, which may include high levels of severe unremitting symptoms of mental disorder. Treatment is focused on preventing deterioration and reducing impairment; improvement is expected to occur slowly.

Data element attributes

Collection and usage attributes

Guide for use:

This data element is used to disaggregate data on beds, activity, expenditure and staffing for admitted patient settings in mental health service units (see Specialised mental health service – service setting, code N data element).

This includes prison-based services, but excludes services that are primarily for children and</p>
-----------------------	---

adolescents and for older people even where they include a forensic component.

CODE 4 General

These services principally target the general adult population (aged 18–64 years) but may also provide services to children, adolescents or older people. These services are those services that cannot be described as specialist child and adolescent services or services for older people. It excludes forensic services.

Data element attributes

Collection and usage attributes

Guide for use:

This data element is used to disaggregate data on beds, activity, expenditure and staffing for admitted patient settings in mental health service units (see service setting data element).

The order of priority for coding is:

- where the forensic services are for children/adolescents or older persons these services should be coded to the category for that age group; and
- where the forensic services are for adults these services should be coded to forensic.

<i>Maximum character length:</i>	2	
<i>Supplementary values:</i>	Value	Meaning
	99	Unknown/not stated/inadequately described
<i>Unit of measure:</i>	Hour (h)	

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Whole numbers of hours staffed (no decimals or fractions). Valid numbers are 1 to 24. The hours staffed provides a measure of service intensity for the reporting and analysis of staff, financial and activity data. For residential mental health services, this refers to the number of hours per day during which appropriately trained staff (either with formal qualifications and/or on the job training) are employed on site, as their normal place of employment, within the service unit. It excludes periods where the service unit is only staffed by a resident sleepover staff member or any period where staff are present but not employed on site at the service unit. Excludes ambulatory and admitted patient services. Round to nearest whole hour. Where the number of hours staffed varies by day, average the number of hours staffed over a week, including the weekend.

Value	Meaning						
1	Yes						
2	No						

Data element attributes

Collection and usage attributes

Guide for use: This metadata item is a qualifier of the three 'Rehabilitation' care types for admitted patients in private hospitals. When an admitted patient in a private hospital is receiving rehabilitation care (as defined in Hospital service – care type, code N[N].N), this metadata item should be recorded to denote whether or not that care meets the criteria for 'specialist rehabilitation'.

These are the criteria determined by The Commonwealth Department of Health and Ageing in respect of patients treated in the private sector, specialist rehabilitation is:

- Provided by a specialist rehabilitation unit (a separate physical space and a specialist rehabilitation team providing admitted patient and/or ambulatory care) meeting guidelines issued by the Commonwealth Department of Health and Ageing, and
- provided by a multi-disciplinary team which is under the clinical management of a consultant in rehabilitation medicine or equivalent, and
- provided for a person with limited functioning (impairments, activity limitations and participation restrictions) and for whom there is a reasonable expectation of functional gain, and

- for whom the primary treatment goal is improvement in functioning status which is evidenced in the medical record by:
 - an individualised and documented initial and periodic assessment of functional ability, or
 - an individualised multi-disciplinary rehabilitation plan which includes agreed rehabilitation goals and indicative timeframes.

Comments:

This metadata item has been developed by the Private Rehabilitation Working Group, and agreed by the private rehabilitation hospital sector, the private health insurance sector and the Commonwealth Department of Health and Ageing. Whilst most patients will be treated by a consultant in rehabilitation medicine (a Fellow of the Australasian Faculty of Rehabilitation Medicine) there are circumstances in which the treating doctor will not be a Fellow of the Faculty. These include, but are not limited to, care provided in geographic areas where there is a shortage of Fellows of the Australasian Faculty of Rehabilitation Medicine.

Data element attributes

Collection and usage attributes

Guide for use:

It is recommended that the TNM Manual of the UICC be used whenever it is applicable. The classifications published in the American Joint Committee on Cancer (AJCC) Cancer Staging Manual are identical to the TNM classifications of the UICC.

TNM is not applicable to all tumour sites. Staging is of limited use in acute leukaemias, although a staging system is used for chronic lymphocytic leukaemia. Separate staging systems exist for lymphomas and myeloma. The *NHMRC Guidelines for the prevention, early detection and management of colorectal cancer (CRC)* support the use of the Australian Clinico-Pathological Staging (ACPS) System. A table of correspondences between ACPS and TNM classifications is available.

The current edition of each staging scheme should be used.

05	Neurosurgery																								
06	Ophthalmology																								
07	Orthopaedic surgery																								
08	Plastic surgery																								
09	Urology																								
10	Vascular surgery																								
11	Other																								

Collection and usage attributes

<i>Comments:</i>	The above classifications are consistent with the Recommended Medical Specialties and Qualifications agreed by the National Specialist Qualification Advisory Committee of Australia, September 1993. Vascular surgery is a subspecialty of general surgery. The Royal Australian College of Surgeons has a training program for vascular surgeons. The specialties listed above refer to the surgical component of these specialties - ear, nose and throat surgery refers to the surgical component of the specialty otolaryngology; gynaecology refers to the gynaecological surgical component of obstetrics and gynaecology; ophthalmology refers to the surgical component of the specialty (patients awaiting argon laser phototherapy are not included).

Systemic therapy agent name

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Cancer treatment – systemic therapy agent name (primary cancer), antineoplastic drug code (Self-Instructional Manual for Tumour Registrars Book 8 3rd edn) X[X(39)]
<i>METeOR identifier:</i>	288446
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The chemotherapeutic agent or anti-cancer drug used for treatment of the primary cancer, as represented by a code.
Data Element Concept:	Cancer treatment – systemic therapy agent name (primary cancer)

Value domain attributes

Representational attributes

<i>Classification scheme:</i>	Self-Instructional Manual for Tumour Registrars Book 8 Antineoplastic Drugs, 3rd edition
<i>Representation class:</i>	Code
<i>Data type:</i>	String
<i>Format:</i>	X[X(39)]
<i>Maximum character length:</i>	40

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>The purpose of collecting specific treatment information is to account for all treatment types, which may assist in evaluation of effectiveness of different treatment patterns. The actual agents used will sometimes be of interest.</p> <p>Systemic therapy often involves treatment with a combination of agents. These may be known by acronyms but since details of drugs and acronyms may vary it is recommended that each agent be recorded separately.</p> <p>Oral chemotherapy normally given on an outpatient basis should also be included.</p> <p>New codes and names will need to be added as new agents become available for clinical use.</p> <p>Hormone therapy agents and immunotherapy agents should be recorded under this data element.</p>
<i>Collection methods:</i>	The full name of the agent(s) should be recorded if the coding manual is not available.
<i>Comments:</i>	Collecting dates for systemic therapy will allow evaluation of treatments delivered and of time intervals from diagnosis to treatment, from treatment to recurrence and from treatment to death.

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	In this context, teaching relates to teaching hospitals affiliated with universities providing undergraduate medical education as advised by the relevant state health authority.
<i>Comments:</i>	<p>The initial intention based on the Taskforce on National Hospital Statistics approach had been to have non-direct care activity indicators for all of the following non-direct patient care activities:</p> <ul style="list-style-type: none">• teaching• research• group or community contacts• public health activities• mobile centre and/or part-time service. <p>However, the Resources Working Party decided to delete 2, 3, 4 and 5 and place the emphasis on teaching where teaching (associated with a university) was a major program activity of the hospital. The working party took the view that it was extremely difficult to identify research activities in health institutions because many staff consider that they do research as part of their</p>

usual duties. The research indicator was thus deleted and the teaching indicator was agreed to relate to teaching hospitals affiliated with universities providing undergraduate medical education, as advised by the relevant state health authority. If a teaching hospital is identified by a Yes/no indicator then it is not necessary to worry about research (based on the assumption that if you have teaching, you have research).

Value domain attributes

Representational attributes

<i>Representation class:</i>	Text
<i>Data type:</i>	String
<i>Format:</i>	[X(40)]
<i>Maximum character length:</i>	40

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	More than one phone number may be recorded as required. Each phone number should have an appropriate telephone number type code assigned. Record the full phone number (including any prefixes) with no punctuation (hyphens or brackets).
<i>Collection methods:</i>	Prefix plus telephone number: Record the prefix plus telephone number. The default should be the local prefix with an ability to overtype with a different prefix. For example, 08 8226 6000 or 0417 123456. Punctuation: Do not record punctuation. For example, (08) 8226 6000 or 08-8226 6000 would not be correct. Unknown: Leave the field blank.
<i>Comments:</i>	Concerned with the use of person identification data. For organisations that create, use or maintain records on people. Organisations should use this standard, where appropriate, for collecting data when registering people. The positive and unique identification of people is a critical event in service delivery, with direct implications for the safety and quality of care delivered by health and community services.

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Revascularisation PCI relates to balloon angioplasty inflation and/or stent implantation performed for subsequent restoration of blood flow.
<i>Comments:</i>	Routine revascularisation PCI may be performed after ST-segment-elevation myocardial infarction for people with objective evidence of recurrent myocardial infarction in whom there is spontaneous or inducible ischaemia or haemodynamic instability. Revascularisation PCI may also be performed for treatment of high-risk non-ST-segment-elevation acute coronary syndrome.

	CODE 3 Irregular smoker A person who smokes less than weekly
	CODE 4 Ex-smoker A person who does not smoke at all now, but has smoked at least 100 cigarettes or a similar amount of other tobacco products in his/her lifetime.
	CODE 5 Never-smoker A person who does not smoke now and has smoked fewer than 100 cigarettes or similar amount of other tobacco products in his/her lifetime.

Source and reference attributes

Reference documents: Standard Questions on the Use of Tobacco Among Adults (1998)

Data element attributes

Collection and usage attributes

Collection methods: The recommended standard for collecting this information is the Standard Questions on the Use of Tobacco Among Adults - interviewer administered (Questions 1 and 4) and self-administered (Questions 1 and 1a) versions. The questionnaires are designed to cover persons aged 18 years and over.

Comments: There are two other ways of categorising this information:

- Regular and irregular smokers where a regular smoker includes someone who is a daily smoker or a weekly smoker. 'Regular' smoker is the preferred category to be reported in prevalence estimates.
- Daily and occasional smokers where an occasional smoker includes someone who is a weekly or irregular smoker. The category of 'occasional' smoker can be used when the aim of the study is to draw contrast between daily smokers and other smokers.

Where this information is collected by survey and the sample permits, population estimates should be presented by sex and 5-year age groups. Summary statistics may need to be adjusted for age and other relevant variables.

Smoker type is used to define subpopulations of adults (age 18+ years) based on their smoking behaviour.

Smoking has long been known as a health risk factor. Population studies indicate a relationship between smoking and increased mortality/morbidity.

This data element can be used to estimate smoking prevalence. Other uses are:

- To evaluate health promotion and disease prevention programs (assessment of interventions)
- To monitor health risk factors and progress towards National Health Goals and Targets

It is recommended that in surveys of smoking, data on age, sex and other socio-demographic variables should be collected. It is also recommended that when smoking is investigated in relation to health, data on other risk factors including pregnancy status, physical activity, overweight and obesity, and alcohol consumption should be collected.

Tobacco smoking—consumption/quantity (cigarettes)

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Person – number of cigarettes smoked (per day), total N[N]
<i>METeOR identifier:</i>	270332
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The total number of cigarettes (manufactured or roll-your-own) smoked per day by a person.
<i>Context:</i>	Public health and health care
<i>Data Element Concept:</i>	Person – number of cigarettes smoked

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total	
<i>Data type:</i>	Number	
<i>Format:</i>	N[N]	
<i>Maximum character length:</i>	2	
<i>Supplementary values:</i>	Value	Meaning
	99	Not stated/inadequately described

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>This metadata item is relevant only for persons who currently smoke cigarettes daily or at least weekly. Daily consumption should be reported, rather than weekly consumption. Weekly consumption is converted to daily consumption by dividing by 7 and rounding to the nearest whole number.</p> <p>Quantities greater than 98 (extremely rare) should be recorded as 98.</p>
<i>Collection methods:</i>	<p>The recommended standard for collecting this information is the Standard Questions on the Use of Tobacco Among Adults (1998) - interviewer administered (Questions 3a and 3b) and self-administered (Questions 2a and 2b) versions.</p> <p>The questions cover persons aged 18 and over.</p>
<i>Comments:</i>	<p>The number of cigarettes smoked is an important measure of the magnitude of the tobacco problem for an individual.</p> <p>Research shows that of Australians who smoke, the overwhelming majority smoke cigarettes (manufactured or roll-your-own) rather than other tobacco products.</p> <p>From a public health point of view, consumption level is relevant only for regular smokers (those who smoke daily or at least weekly).</p>

Data on quantity smoked can be used to:

- evaluate health promotion and disease prevention programs (assessment of interventions)
- monitor health risk factors and progress towards National Health Goals and Targets
- ascertain determinants and consequences of smoking
- assess a person's exposure to tobacco smoke.

Where this information is collected by survey and the sample permits, population estimates should be presented by sex and 5-year age groups. Summary statistics may need to be adjusted for age and other relevant variables.

It is recommended that in surveys of smoking, data on age, sex and other socio-demographic variables should be collected. It is also recommended that when smoking is investigated in relation to health, data on other risk factors including pregnancy status, physical activity, overweight and obesity, and alcohol consumption should be collected.

Tobacco smoking—duration (daily smoking)

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Person – tobacco smoking duration (daily smoking), total years N[N]
<i>METeOR identifier:</i>	270330
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The total duration in years, of daily smoking for a person who is now a daily smoker or has been a daily smoker in the past.
<i>Context:</i>	Public health and health care
<i>Data Element Concept:</i>	Person – tobacco smoking duration

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	Number
<i>Format:</i>	N[N]
<i>Maximum character length:</i>	2
<i>Supplementary values:</i>	Value Meaning
	99 Not stated/inadequately described
<i>Unit of measure:</i>	Year

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	In order to estimate duration of smoking the person's date of birth or current age should also be collected. If a person reports that they smoke daily now then duration is the difference between the start-age and the person's current age. If a person reports that they smoked daily in the past but do not smoke daily now then duration is the difference between the quit age and the start age. Record duration of less than one year as 0.
<i>Collection methods:</i>	The recommended standard for collecting this information is the Standard Questions on the Use of Tobacco Among Adults (1998) - interviewer administered (Question 1, 5, 6, 7) and self-administered (Question 1, 3, 3a, 4) versions. The questions cover persons aged 18 years and over.
<i>Comments:</i>	Duration of daily smoking is an indicator of exposure to increased risk to health. In this data element, duration is measured as the years elapsed from the time the person first started smoking daily and when they most recently quit smoking daily (or the present for those persons who still smoke daily). There may have been intervening periods when the person did not smoke daily. However, as the negative health effects of

smoking accumulate over time, the information on duration of daily smoking, as measured in this data element, remains useful, despite any intervening periods of non-daily smoking.

Where this information is collected by survey and the sample permits, population estimates should be presented by sex and 5-year age groups. Summary statistics may need to be adjusted for age and other relevant variables.

It is recommended that in surveys of smoking, data on age, sex and other socio-demographic variables should be collected. It is also recommended that when smoking is investigated in relation to health, data on other risk factors including pregnancy status, physical activity, overweight and obesity, and alcohol consumption should be collected.

1	Ever-daily						
2	Never-daily						

Collection and usage attributes

<i>Guide for use:</i>	<p>CODE 1 Ever-daily</p> <p>If a person reports that they now smoke cigarettes, cigars, pipes or any other tobacco products daily OR if they report that in the past they have been a daily smoker, they are coded to 1 (ever-daily).</p> <p>CODE 2 Never-daily</p> <p>If a person reports that they have never smoked cigarettes, cigars, pipes or any other tobacco products daily AND they have never in the past been a daily smoker then they are coded to 2 (never-daily).</p>
-----------------------	--

Data element attributes

Collection and usage attributes

<i>Collection methods:</i>	The recommended standard for collecting this information is the Standard Questions on the Use of Tobacco Among Adults (1998) - interviewer administered (Question 1 and 5) and self-administered (Question 1 and 3) versions. The questions cover persons aged 18 years and over.
<i>Comments:</i>	Whether a person has ever smoked on a daily basis can be used to assess an individual's health risk from smoking and to monitor population trends in smoking behaviour.

It can also be used to:

- evaluate health promotion and disease prevention programs (assessment of interventions);
- monitor health risk factors;
- ascertain determinants and consequences of smoking.

Where the information is collected by survey and the sample permits, population estimates should be presented by sex and 5-year age groups. Summary statistics may need to be adjusted for age and other relevant variables.

It is recommended that in surveys of smoking, data on age, sex and other socio-demographic variables should be collected. It is also recommended that when smoking is investigated in relation to health, data on other risk factors including pregnancy status, physical activity, overweight and obesity, and alcohol consumption should be collected.

<i>Data type:</i>	Number										
<i>Format:</i>	N										
<i>Maximum character length:</i>	1										
<i>Permissible values:</i>	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>1</td><td>Smokes daily</td></tr><tr><td>2</td><td>Smokes at least weekly, but not daily</td></tr><tr><td>3</td><td>Smokes less often than weekly</td></tr><tr><td>4</td><td>Does not smoke at all</td></tr></tbody></table>	Value	Meaning	1	Smokes daily	2	Smokes at least weekly, but not daily	3	Smokes less often than weekly	4	Does not smoke at all
Value	Meaning										
1	Smokes daily										
2	Smokes at least weekly, but not daily										
3	Smokes less often than weekly										
4	Does not smoke at all										

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	To record multiple use data, repeat the data field as many times as necessary, viz: product1, product2 etc. In most instances, data on both product and frequency are needed. In such situations, repeat both fields as many times as necessary, viz: product1, frequency1, product2, frequency2 etc.
<i>Collection methods:</i>	The recommended standard for collecting this information is the Standard Questions on the Use of Tobacco Among Adults (1998) - interviewer administered (Question 1) and self-administered (Question 1) versions. The questions relate to smoking of manufactured cigarettes, roll-your-own cigarettes, cigars, pipes and other tobacco products and are designed to cover persons aged 18 years and over.
<i>Comments:</i>	The frequency of smoking helps to assess a person's exposure to tobacco smoke which is a known risk factor for cardiovascular disease and cancer. From a public health point of view, the level of consumption of tobacco as measured by frequency of smoking tobacco products is only relevant for regular smokers (persons who smoke daily or at least weekly).

Where this information is collected by survey and the sample permits, population estimates should be presented by sex and 5-year age groups. Summary statistics may need to be adjusted for age and other relevant variables.

It is recommended that in surveys of smoking, data on age, sex and other socio-demographic variables should be collected. It is also recommended that when smoking is investigated in relation to health, data on other risk factors including pregnancy status, physical activity, overweight and obesity, and alcohol consumption should be collected.

3	Cigars														
4	Pipes														
5	Other tobacco product														
6	None														

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	To record multiple use data, repeat the data field as many times as necessary, viz: product1, product2 etc. In most instances, data on both product and frequency are needed. In such situations, repeat both fields as many times as necessary, viz: product1, frequency1, product2, frequency2 etc.
<i>Collection methods:</i>	The recommended standard for collecting information about smoking the above tobacco products is the Standard Questions on the Use of Tobacco Among Adults (1998) - interviewer or self-administered versions.
<i>Comments:</i>	Tobacco smoking is a known risk factor for cardiovascular disease and cancer. The type of tobacco product smoked by a person in conjunction with information about the frequency of smoking assists with establishing a profile of smoking behaviour at the individual or population level and with monitoring shifts from cigarette smoking to other types of tobacco products and vice versa.

It is recommended that in surveys of smoking, data on age, sex and other socio-demographic variables should be collected. It is also recommended that when smoking is investigated in relation to health, data on other risk factors including pregnancy status, physical activity, overweight and obesity, and alcohol consumption should be collected.

Tobacco smoking—quit age (daily smoking)

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Person – tobacco smoking quit age (daily smoking), total years NN
<i>METeOR identifier:</i>	270323
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The age in years at which a person who has smoked daily in the past and is no longer a daily smoker most recently stopped smoking daily.
<i>Context:</i>	Public health and health care
<i>Data Element Concept:</i>	Person – tobacco smoking quit age

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	String
<i>Format:</i>	NN
<i>Maximum character length:</i>	2
<i>Supplementary values:</i>	Value Meaning
	99 Not stated/inadequately described
<i>Unit of measure:</i>	Year

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>In order to estimate quit-age, the person's date of birth or current age should also be collected. Quit-age may be directly reported, or derived from the date the person quit smoking or the length of time since quitting, once the person's date of birth (or current age) is known.</p> <p>Quit-age is relevant only to persons who have been daily smokers in the past and are not current daily smokers.</p>
<i>Collection methods:</i>	<p>The recommended standard for collecting this information is the Standard Questions on the Use of Tobacco Among Adults - interviewer administered (Question 6) and self-administered (Question 3a) versions. The questions cover persons aged 18 years and over.</p> <p>The relevant question in each version of the questionnaires refers to when the person finally stopped smoking daily, whereas the definition for this metadata item refers to when the person most recently stopped smoking daily. However, in order to provide information on when the person most recently stopped smoking daily, the most appropriate question to ask at the time of</p>

collecting the information is when the person finally stopped smoking daily.

Comments:

Quit-age and start-age provide information on the duration of daily smoking and exposure to increased risk to health.

Where the information is collected by survey and the sample permits, population estimates should be presented by sex and 5-year age groups. Summary statistics may need to be adjusted for age and other relevant variables.

It is recommended that in surveys of smoking, data on age, sex and other socio-demographic variables should be collected. It is also recommended that when smoking is investigated in relation to health, data on other risk factors including pregnancy status, physical activity, overweight and obesity, and alcohol consumption should be collected.

<i>Unit of measure:</i>	Year

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Record age in completed years. This information is relevant only if a person currently smokes daily or has smoked daily in the past.
<i>Collection methods:</i>	The recommended standard for collecting this information is the Standard Questions on the Use of Tobacco Among Adults (1998) - interviewer administered (Question 7) and self-administered (Question 4) versions. The questions cover persons aged 18 years and over.
<i>Comments:</i>	Start-age may be used to derive duration of smoking, which is a much stronger predictor of the risks associated with smoking than is the total amount of tobacco smoked over time. Where the information is collected by survey and the sample permits, population estimates should be presented by sex and age groups. The recommended age groups are: It is recommended that in surveys of smoking, data on age, sex and other socio-demographic variables should be collected. It is also recommended that when smoking is investigated in relation to health, data on other risk factors including pregnancy status,

physical activity, overweight and obesity, and alcohol consumption should be collected.

Data element attributes

Collection and usage attributes

Guide for use:

In order to estimate time since quitting for all respondents, the person's date of birth or current age should also be collected.

For optimal flexibility of use, the time since quitting is coded as months or years. However, people may report the time that they quit smoking in various ways (e.g. age, a date, or a number of days or weeks ago). When the information is reported in weeks and is less than 4, or in days and is less than 28, then code 80.

When the person reports the time since quitting as weeks ago, convert into months by dividing by 4 (rounded down to the nearest month).

If days reported are between 28 and 59, then code 81.

Where the information is about age only, time since quitting (daily use) is the difference between quit-age and age at survey.

Collection methods:

The recommended standard for collecting this information is the Standard Questions on the Use of Tobacco Among Adults (1998) - interviewer administered (Question 6) and self-administered (Question 3) versions.

Comments:

Time since quitting daily smoking may give an indication of improvement in the health risk profile of a person. It is also useful in evaluating health promotion campaigns.

Where this information is collected by survey and the sample permits, population estimates should be presented by sex and 5-year age groups. Summary statistics may need to be adjusted for age and other relevant variables.

It is recommended that in surveys of smoking, data on age, sex and other socio-demographic variables should be collected. It is also recommended that when smoking is investigated in relation to health, data on other risk factors including pregnancy status, physical activity, overweight and obesity, and alcohol consumption should be collected.

<i>Representation class:</i>	Total
<i>Data type:</i>	Number
<i>Format:</i>	N[NNNN]
<i>Maximum character length:</i>	5
<i>Unit of measure:</i>	Day

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>Designated psychiatric units are staffed by health professionals with specialist mental health qualifications or training and have as their principal function the treatment and care of patients affected by mental disorder. The unit may or may not be recognised under relevant State and Territory legislation to treat patients on an involuntary basis. Patients are admitted patients in the acute and psychiatric hospitals and residents in community based residences.</p> <p>Public acute care hospitals: Designated psychiatric units in public acute care hospitals are normally recognised by the State/Territory health authority in the funding arrangements applying to those hospitals.</p> <p>Private acute care hospitals: Designated psychiatric units in private acute care hospitals normally require license or approval by the State/Territory health authority in order to receive benefits from health funds for the provision of psychiatric care.</p> <p>Psychiatric hospitals: Total psychiatric care days in stand-alone psychiatric hospitals are calculated by counting those days the patient received</p>
-----------------------	--

specialist psychiatric care. Leave days and days on which the patient was receiving other care (e.g. specialised intellectual ability or drug and alcohol care) should be excluded.

Psychiatric hospitals are establishments devoted primarily to the treatment and care of admitted patients with psychiatric, mental or behavioural disorders. Private hospitals formerly approved by the Commonwealth Department of Health under the Health Insurance Act 1973 (Commonwealth) (now licensed/approved by each State/Territory health authority), catering primarily for patients with psychiatric or behavioural disorders are included in this category.

Community-based residential services:

Designated psychiatric units refers to 24-hour staffed community-based residential units established in community settings that provide specialised treatment, rehabilitation or care for people affected by a mental illness or psychiatric disability. Special psychiatric units for the elderly are covered by this category, including psychogeriatric hostels or psychogeriatric nursing homes. Note that residences occupied by admitted patients located on hospital grounds, whether on the campus of a general or stand-alone psychiatric hospital, should be counted in the category of admitted patient services and not as community-based residential services.

Counting of patient days and leave days in designated psychiatric units should follow the standard definitions applying to these items.

For each period of care in a designated psychiatric unit, total days is calculated by subtracting the date on which care commenced within the unit from the date on which the specialist unit care was completed, less any leave days that occurred during the period.

Total psychiatric care days in 24-hour community-based residential care are calculated by counting those days the patient received specialist psychiatric care. Leave days and days on which the patient was receiving other care (e.g. specialised intellectual ability or drug and alcohol care) should be excluded.

Admitted patients in acute care:

Commencement of care within a designated psychiatric unit may be the same as the date the patient was admitted to the hospital, or occur subsequently, following transfer of the patient from another hospital ward. Where commencement of psychiatric care occurs by transfer from another ward, a new episode of care may be recorded, depending on whether the care type has changed (see metadata item Care type). Completion of care within a designated psychiatric unit may be the same as the date the patient was discharged from the hospital, or occur prior to this on transfer of the patient to another hospital ward. Where completion of psychiatric care is followed by transfer to another hospital ward, a new episode of care may be recorded, depending on whether the care type has changed (see metadata item Care type). Total psychiatric care days may cover one or more periods in a designated psychiatric unit within the overall

Collection methods:

hospital stay.

Accurate counting of total days in psychiatric care requires periods in designated psychiatric units to be identified in the person-level data collected by state or territory health authorities. Several mechanisms exist for this data field to be implemented:

- Ideally, the new data field should be collected locally by hospitals and added to the unit record data provided to the relevant state/territory health authority.
- Acute care hospitals in most states and territories include details of the wards in which the patient was accommodated in the unit record data provided to the health authority. Local knowledge should be used to identify designated psychiatric units within each hospital's ward codes, to allow total psychiatric care days to be calculated for each episode of care.
- Acute care hospitals and 24-hour staffed community-based residential services should be identified separately at the level of the establishment.

Comments:

This metadata item was originally designed to monitor trends in the delivery of psychiatric admitted patient care in acute care hospitals. It has been modified to enable collection of data in the community-based residential care sector. The metadata item is intended to improve understanding in this area and contribute to the ongoing evaluation of changes occurring in mental health services.

Data element attributes

Collection and usage attributes

Collection methods: This triage classification is to be used in the emergency departments of hospitals. Patients will be triaged into one of five categories on the National Triage Scale according to the triageur's response to the question: 'This patient should wait for medical care no longer than ...?'.
The triage category is allocated by an experienced **registered nurse** or medical practitioner. If the triage category changes, both triage categories can be captured, but the original category must be reported in this data element.

Tumour size at diagnosis (solid tumours)

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Person with cancer – solid tumour size (at diagnosis), total millimetres NNN
<i>METeOR identifier:</i>	370042
<i>Registration status:</i>	Health, Standard 06/03/2009
<i>Definition:</i>	The largest dimension of a solid tumour, measured in millimetres.
Data Element Concept:	Person with cancer – solid tumour size

Value domain attributes

Representational attributes

<i>Representation class:</i>	Total
<i>Data type:</i>	String
<i>Format:</i>	NNN
<i>Maximum character length:</i>	3
<i>Supplementary values:</i>	Value Meaning 999 Unknown
<i>Unit of measure:</i>	Millimetre (mm)

Collection and usage attributes

Guide for use: Size in millimetres with valid values 001 to 997.

Data element attributes

Collection and usage attributes

Guide for use: The reporting standard for the size of solid tumours is:
Breast cancer or other solid neoplasms - the largest tumour dimension, measured to a precision of 1mm.
Round to the nearest millimetre, rounding up if size is $\geq .5$ mm (e.g. 1.50mm, 1.54mm recorded as 2mm, 1.47mm recorded as 1mm).
General coding rules:
Recorded size:
Only record measured size if stated, otherwise record size as unknown. Do not attempt to estimate size from descriptions of the tumour, such as 'tumour occupying three quarters of tissue'.
Do not take values for size from sources other than histopathology (such as imaging, mammography or clinical examination).
Size reported for multiple specimens:

If tumour is removed in more than one procedure (e.g. biopsy and excision, local excision and re-excision) do not sum the sizes across multiple pathology reports but rather use the larger of the measured sizes from the separate pathology reports.

If tumour is divided into several parts (in the same pathology report), do not sum sizes together but rather use the larger of the measured sizes. However, if the pathologist states an aggregate or composite size, record that size.

Multifocal tumour:

If the tumour is multifocal, record the size of the largest measured focus. Do not attempt to sum sizes of different foci.

Macroscopic size:

If only macroscopic size is given, record this value.

If the macroscopic and microscopic measurements differ, the microscopic measurement should be recorded.

Exclusions:

Size is not recorded for Phyllodes tumours, sarcomas, or lymphomas.

Invasive breast cancer coding rules:

Note: These rules are to be used only when the record pertains to an invasive breast cancer (as per Person with cancer-primary site of cancer, code (ICDO-3), ANN{.N[N]}).

Invasive tumours with an in situ component:

When an invasive tumour contains an in situ component, only record the size of the invasive component as stated.

If the size of the invasive tumour is not recorded separately to the in-situ component, then record the total size of the tumour without any attempt to estimate the invasive component using percentage or size of the in situ component.

Microinvasive tumour:

For microinvasive tumours, record size in millimetres if stated. If microinvasion is stated but no size is recorded, enter 990 in size field to enable these very small tumours to be differentiated from other tumours without measured sizes.

Bilateral breasts tumours:

Bilateral tumours are recorded as two separate primary tumours each having their own size (and other data elements).

Multifocal tumours with different morphology:

Foci with different morphology should be considered to be separate primary tumours each having their own size (and other data elements). The coder needs to ascertain whether two foci with differing morphology are separate primaries with different morphology or a single multifocal primary with a mixed histology. In the latter case the rule of taking the size from the larger focus would apply as stated.

Collection methods:

This data item is collected for the size of tumours as specified in pathology reports.

Collection and usage attributes

Guide for use:

CODE 3 Residential aged care service

Includes nursing home beds in acute care hospitals.

CODE 4 Specialised alcohol/other drug treatment residence

Includes alcohol/other drug treatment units in psychiatric hospitals.

CODE 5 Specialised mental health community-based residential support service

Specialised mental health community-based residential support services are defined as community-based residential supported accommodation specifically targeted at people with psychiatric disabilities which provides 24-hour support/rehabilitation on a residential basis.

CODE 6 Domestic-scale supported living facility (e.g. group home for people with disability)

Domestic-scale supported living facilities include group homes for people with disability, cluster apartments where a support worker lives on-site, community residential apartments (except mental health), congregate care arrangements. Support is provided by staff on either a live-in or rostered basis, and they may or may not have 24-hour supervision and care.

CODE 10 Other supported accommodation

Includes other supported accommodation facilities such as hostels for people with disability and Residential Services/Facilities (Victoria and South Australia only). These facilities provide board and lodging and rostered care workers provide client support services.

Data element attributes

Collection and usage attributes

Guide for use:

'Usual' is defined as the type of accommodation the person has lived in for the most amount of time over the past three months prior to admission to institutional health care or first contact with a community service setting. If a person stays in a particular place of accommodation for four or more days a week over the period, that place of accommodation would be the person's type of usual accommodation. In practice, receiving an answer to questioning about a person's usual accommodation setting may be difficult to achieve. The place the person perceives as their usual accommodation will often prove to be the best approximation of their type of usual accommodation.

Comments:

The changes made to this metadata item are in accordance with

the requirements of the National Mental Health Information Strategy Committee and take into consideration corresponding definitions in other data dictionaries (e.g. Home and Community Care Data Dictionary Version 1 and National Community Services Data Dictionary Version 1).

0	None														
1	Oxytocin														
2	Prostaglandins														
3	Artificial rupture of membranes (ARM)														
4	Other														
5	Not stated														
<i>Supplementary values:</i>															

Collection and usage attributes

<i>Comments:</i>	Prostaglandin is listed as a method of augmentation in the data domain. Advice from the Royal Australian and New Zealand College of Obstetricians and Gynaecologists and the manufacturer indicates that vaginal prostaglandin use is not recommended or supported as a method of augmentation of labour as it may significantly increase the risk of uterine hyperstimulation. In spite of this, the method is being used and it is considered important to monitor its use for augmentation.
------------------	--

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	More than one method of augmentation can be recorded, except where 0=none applies. Collection units need to edit carefully the use of prostaglandins as an augmentation method. Results from checking records have shown that either the onset of labour was incorrect or that the augmentation method was incorrectly selected.
-----------------------	---

Comments: Type of augmentation determines the progress and duration of labour and may influence the method of delivery and the health status of the baby at birth.

Collection and usage attributes

Guide for use:

CODE 101 Admitted patient care – Mental health program

An **admission** to a mental health program includes:

The component of the mental health program that provides admitted patient care. These services are delivered through specialised psychiatric hospitals and designated psychiatric units located within hospitals that are not specialised psychiatric hospitals.

NOTE: This is the admitted patient component of the mental health care program reported to the Mental Health Establishments NMDS.

Excludes residential care mental health programs, **ambulatory care** mental health programs which are provided as **outpatient** and **emergency department** care to non-admitted patients, and community-based (non-hospital) mental health programs.

CODE 102 Admitted patient care – Non-mental health program

An admitted patient non-mental health program includes:

All services, excluding mental health services, provided to admitted patients, including acute care, rehabilitative care, palliative care, geriatric evaluation and management, psychogeriatric care, maintenance care, newborn care and any

other admitted patient care e.g. organ procurement – posthumous. Also includes admitted patient services where service delivery is contracted to private hospitals or treatment facilities and **hospital in the home** services.

Excludes emergency department and outpatient care provided to non-admitted patients, and community-based (non hospital) care.

CODE 199 Admitted patient care – Not further defined

Comprises admitted patient care services that could be a combination of categories 101 and 102 but which could not be further disaggregated.

State and territory health authorities are only to report admitted patient care under codes 101 or 102.

CODE 201 Residential care – Mental health program

A residential mental health care program includes:

The component of the specialised mental health program that provides residential care. A **resident** in one **residential mental health service** cannot be concurrently a resident in another residential mental health service. A resident in a residential mental health service can be concurrently a patient admitted to a hospital.

Comprises the residential component of the mental health care program reported to the Mental Health Establishments NMDS.

Excludes residential aged care services, residential disability, alcohol and other drug treatment health care services and residential type care provided to admitted patients in hospitals. Also excludes mental health programs provided to admitted patients, emergency and outpatient care patients, and community health (non-hospital) and other ambulatory care patients.

CODE 202 Residential care – Non-mental health program

A residential non-mental health care program includes alcohol and other drug treatment health care services.

Excludes residential mental health care program services, residential aged care services, residential disability services and residential type care provided to admitted patients in hospitals. Also excludes services provided to admitted patients and patients receiving ambulatory care.

CODE 299 Residential care – Not further defined

Comprises residential care services that could be a combination of categories 201 and 202 but which could not be further disaggregated.

State and territory health authorities are only to report residential care under codes 201 or 202.

CODE 301 Ambulatory care – Mental health program

The component of a specialised mental health program supplied by a specialised mental health service that provides **ambulatory health care**.

Comprises the ambulatory component of the mental health care program reported to the Mental Health Establishments NMDS,

i.e. specialised mental health program services provided by emergency departments, outpatient clinics and community-based (non-hospital) services.

Excludes specialised mental health care provided to admitted and residential patients.

CODE 302 Ambulatory care – Emergency department

Comprises emergency department services provided in an **emergency department**.

Excludes specialised mental health services provided by emergency departments, outpatient clinics and community-based (non-hospital) services. Also excludes residential and admitted patient services.

CODE 303 Ambulatory care – General practitioner

This item is not currently required to be reported by state and territory health authorities.

The definition relates to the broad type of non-referred general practitioner services as specified on the Medicare Benefits Schedule website. These services comprise general practitioner attendances, including General Practitioner, Vocationally Registered General Practitioner (GP/VRGP) and other non-referred attendances, to non-admitted patients, and services provided by a practice nurse or registered Aboriginal Health Worker on behalf of a general practitioner.

This category is not limited to services funded by Medicare Australia. It also includes services funded from other sources such as Motor Vehicle Third Party Insurance and Workers Compensation Insurance, among others. Therefore, general or nurse practitioner services such as vaccinations for overseas travel are included regardless of their funding source. These non-referred general practitioner services are provided in private or group practices in medical clinics, community health care centres or hospital outpatient clinics.

Excludes mental health care services reported under code 301 and services provided to non-admitted patients in an emergency department.

CODE 304 Ambulatory care – Medical specialist

This item is not currently required to be reported by state and territory health authorities.

Specialist attendances, obstetrics, anaesthetics, radiotherapy, operations and assistance at operations care. These services are defined in the current Medicare Benefits Schedule. Includes services funded by Medicare Benefits Scheme, Motor Vehicle Third Party Insurance, Workers Compensation Insurance and from patient out-of-pocket payments. These services are provided in private or group practices in medical clinics, community health care centres or hospital outpatient clinics.

Includes salaried medical officers.

Excludes mental health care services reported under code 301 and services provided to non-admitted patients in an emergency department.

CODE 305 Ambulatory care – Imaging/pathology service.

This item is not currently required to be reported by state and territory health authorities.

Pathology and diagnostic imaging services as defined in the current Medicare Benefits Schedule. Includes services funded by Medicare Benefits Scheme, Motor Vehicle Third Party Insurance, Workers Compensation Insurance and from patient out-of-pocket payments. These services are provided in private or group practices in medical clinics, community health care centres or hospital outpatient clinics.

Excludes services provided to admitted or residential care patients and non-admitted patients in an emergency department.

CODE 306 Ambulatory care – Dental service

Includes any non-admitted patient and community dental services, including dental assessments, preventative services and treatments, regardless of funding source. Oral and maxillofacial services and cleft lip and palate services, as defined in the current Medicare Benefits Schedule, are also included in this category.

Includes dental services funded from a range of sources such as Medicare Benefits Scheme, Motor Vehicle Third Party Insurance and dental services funded by vouchers for dental care.

These dental services are provided in private or group practices in dental clinics, community health care centres or hospital outpatient clinics.

Excludes dental care provided to admitted patients in hospitals (same day or overnight) or to non-admitted patients in an emergency department.

CODE 307 Ambulatory care – Optometry service

This item is not currently required to be reported by state and territory health authorities.

Optometry services as defined in the current Medicare Benefits Schedule. Includes services funded by Medicare Benefits Scheme, Motor Vehicle Third Party Insurance, Workers Compensation Insurance and from patient out-of-pocket payments. These services are mainly provided in private or group practices, but may be provided in hospital outpatient centres.

Excludes optometry services provided to admitted or residential care patients or to non-admitted patients in an emergency department.

CODE 308 Ambulatory care – Allied health service

Includes services provided by the following allied health items. Aboriginal health worker, diabetes educator, audiologists, exercise physiologist, dietician, mental health worker, occupational therapist, physiotherapist, podiatrist or chiroprapist, chiropractor, osteopath, psychologist and speech pathologist. These services are defined in the current Medicare Benefits Schedule. Includes services funded by Medicare Benefits Scheme, Motor Vehicle Third Party Insurance, Workers Compensation Insurance and from patient out-of-pocket payments.

Excludes allied health services provided to admitted or residential care patients or to non-admitted patients in an emergency department.

CODE 309 Ambulatory care – Community health services

Includes community health services such as family, maternal, child and youth health (including well baby clinics) as well as Aboriginal and Torres Strait Islander and migrant health services. Also includes health care for people with acute, post-acute, chronic and end of life illnesses, alcohol and drug treatment services, child psychology services, community midwifery, community nursing, school and district nursing, community rehabilitation, continence services, telehealth, dietetics, family planning and correctional health services.

Excludes mental health services reported under code 301 and services provided to admitted and residential care patients and non-admitted patients in an emergency department. Also excludes services already reported under codes 303 to 308.

CODE 388 Ambulatory care – Other

Comprises ambulatory care services other than those reported under codes 301 to 309.

CODE 399 Ambulatory care – Not further defined

Comprises ambulatory care services that could be a combination of categories 301 to 309 and 388, but which could not be further disaggregated, such as public outpatient services.

CODE 401 Public health – Communicable disease control

This category includes all activities associated with the development and implementation of programs to prevent the spread of communicable diseases.

Communicable disease control is recorded using three sub-categories:

HIV/AIDS, hepatitis C and sexually transmitted infections

Needle and syringe programs

Other communicable disease control.

The **public health** component of the HIV/AIDS, hepatitis C and STI strategies includes all activities associated with the development and implementation of prevention and education programs to prevent the spread of HIV/AIDS, hepatitis C and sexually transmitted infections.

CODE 402 Public health – Selected health promotion

This category includes those activities fostering healthy lifestyle and a healthy social environment overall, and health promotion activities targeted at health risk factors which lead to injuries, skin cancer and cardiovascular disease (for example diet, inactivity) that are delivered on a population-wide basis. The underlying criterion for the inclusion of health promotion programs within this category was that they are population health programs promoting health and wellbeing.

The Selected health promotion programs are:

Healthy settings (for example municipal health planning)

Public health nutrition

Exercise and physical activity

Personal hygiene

Mental health awareness promotion

Sun exposure and protection

Injury prevention including suicide prevention and female genital mutilation.

CODE 403 Public health – Organised immunisation

This category includes immunisation clinics, school immunisation programs, immunisation education, public awareness, immunisation databases and information systems.

Organised immunisation is recorded using three sub-categories:

Organised childhood immunisation (as defined by the National Health and Medical Research Council Schedule/ Australian Standard Vaccination Schedule)

Organised pneumococcal and influenza immunisation – the target groups for pneumococcal immunisation are Indigenous people over 50 years and high-risk Indigenous younger people aged 15–49 years. Influenza vaccine is available free to all Australians 65 years of age and over, Indigenous people over 50 years and high-risk Indigenous younger people aged 15–19 years.

All other organised immunisation (for example tetanus) – as opposed to ad hoc or opportunistic immunisation.

CODE 404 Public health – Environmental health

This category relates to health protection education (for example safe chemical storage, water pollutants), expert advice on specific issues, development of standards, risk management and public health aspects of environmental health protection. The costs of monitoring and regulating are to be included where costs are borne by a regulatory agency and principally have a public health focus (for example radiation safety, and pharmaceutical regulation and safety).

CODE 405 Public health – Food standards and hygiene

This category includes the development, review and implementation of food standards, regulations and legislation as well as the testing of food by the regulatory agency.

CODE 406 Public health – Breast cancer screening

This category relates to Breast cancer screening and includes the complete breast cancer screening pathway through organised programs.

The breast cancer screening pathway includes such activities as recruitment, screen taking, screen reading, assessment (this includes fine needle biopsy), core biopsy, open biopsy, service management and program management.

CODE 407 Public health – Cervical screening

This category relates to organised cervical screening programs

such as the state cervical screening programs and rural access programs, including coordination, provision of screens and assessment services.

Cervical screening, funded through Medicare, for both screening and diagnostic services is also included. The methodology used in deriving the estimates is set out in the Jurisdictions' technical notes (section 11.2 of NPHER 2004-05).

CODE 408 Public health – Bowel screening

This category relates to organised bowel screening programs, such as the National Bowel Cancer Screening Program (NBCSP) and the Bowel Cancer Screening Pilot program. The screening pathway includes self administered home based tests by persons turning 55 years or 65 years of age across Australia who mail results in for analysis, the assessment/diagnostic service and program management.

CODE 409 Public health – Prevention of hazardous and harmful drug use

This category includes activities targeted at the general population with the aim of reducing the overuse or abuse of alcohol, tobacco, illicit and other drugs of dependence, and mixed drugs. The Australian Standard Classification of Drugs of Concern includes analgesics, sedatives and hypnotics, stimulants and hallucinogens, anabolic agents and selected hormones, antidepressants and anti-psychotics, and also miscellaneous drugs of concern.

Report for each sub-category as below, the aggregate of which will be total expenditure on Prevention of hazardous and harmful drug use:

Alcohol

Tobacco

Illicit and other drugs of dependence

Mixed.

CODE 410 Public health – Public health research

The basic criterion for distinguishing public health research and development from other public health activities is the presence in research and development of an appreciable element of novelty and resolution of scientific and/or technical uncertainty.

Includes mainly new or one-off research in the 8 core public health functions listed under codes 401 to 409.

General research and development work relating to the running of ongoing public health programs is included under the other relevant public health activities in codes 401 to 409.

CODE 488 Public health – Other public health

Comprises public health functions not reported to the National Public Health Expenditure Project.

CODE 499 Public health – Not further defined

Comprises public health services that could be a combination of categories 401 to 410 but which could not be further disaggregated.

State and territory health authorities are only to report public health services under codes 401 to 409.

CODE 501 Health related care – Patient transport

This item comprises transportation in a specially-equipped surface vehicle or in a designated air ambulance to and from facilities for the purposes of receiving medical and surgical care.

Includes all government ambulance services and transport provided by the Royal Flying Doctors Service, care flight and similar services, emergency transport services of public fire rescue departments or defence that operate on a regular basis for civilian emergency services (not only for catastrophe medicine).

Includes transport between hospitals or other medical facilities and transport to or from a hospital or other medical facility and a private residence or other non-hospital/medical services location.

The provider of this service could be a public or private hospital or an ambulance service.

CODE 502 Health related care – Patient transport subsidies

Government subsidies to private ambulance services e.g. patient transport vouchers, support programs to assist isolated patients with travel to obtain specialised health care.

It also includes transportation in conventional vehicles, such as taxi, when the latter is authorised and the costs are reimbursed to the patient (e.g. for patients undergoing renal dialysis or chemotherapy).

CODE 503 Health related care – Medications

This item is not currently required to be reported by state and territory health authorities.

Includes pharmaceuticals and other medical non-durables, prescribed medicines and over-the-counter pharmaceuticals. Included within these categories are: medicinal preparations, branded and generic medicines, drugs, patent medicines, serums and vaccines, vitamins and minerals and oral contraceptives, prescribed medicines exclusively sold to customers with a medical voucher, irrespective of whether it is covered by public or private funding. Includes branded and generic products, private households' non-prescription medicines and a wide range of medical non-durables such as bandages, condoms and other mechanical contraceptive devices, elastic stockings, incontinence articles and toothbrushes, toothpastes and therapeutic mouth washes.

CODE 504 Health related care – Aids and appliances

This item is not currently required to be reported by state and territory health authorities.

This item comprises glasses and other vision products, orthopaedic appliances & other prosthetics, hearing aids, medico-technical devices including wheelchairs and all other miscellaneous medical durables not elsewhere classified such as blood pressure instruments.

CODE 505 Health related care – Health administration

Administrative services which cannot be allocated to a specific health good and service. Those unallocatable services might include, for example, maintaining an office of the Chief Medical Officer; a Departmental liaison officer in the office of the Minister; or a number of other agency-wide items for which it is not possible to derive appropriate or meaningful allocations to particular health programs.

CODE 506 Health related care – Health research

Includes all research on health topics that is not included in public health research (code 410). That is, it includes all research classified under ABS Australian Standard Research Classification code 320000, excluding code 321200.

Excludes public health research and non-health related research.

CODE 588 Health related care – Other

Includes for example, services provided by health and health-related call centres and e-health information services.

Excludes health related care reported under codes 501 to 506 and health assessments provided under the Aged Care Assessment Program which are reported under code 602.

CODE 599 Health related care – Not further defined

Comprises health related care that could be a combination of categories 501 to 506 but which could not be further disaggregated.

State and territory health authorities are only to report health related care under codes 501 to 506.

CODE 601 Other function – Home and community care

This item is not currently required to be reported by state and territory health authorities.

Comprises Home and Community Care services reported under the HACC NMDS.

Information on these service categories is available in the following report:

National classifications of community services. Version 2.0. AIHW Cat. No. HWI 40. Canberra: Australian Institute of Health and Welfare, 2003.

Excludes services reported under codes 602 to 604.

CODE 602 Other function – Aged care

This item is not currently required to be reported by state and territory health authorities.

Includes residential care aged care programs, aged care assessment programs and other non-health aged care programs, such as respite care and day care activities.

Excludes services provided under the HACC program.

CODE 603 Other function – Other welfare

This item is not currently required to be reported by state and territory health authorities.

Includes services delivered to clients, or groups of clients with special needs such as the young or the disabled. Excludes aged care services reported under code 602.

CODE 688 Other function – Other

This item is not currently required to be reported by state and territory health authorities. Includes for example, car parking, accommodation for staff or for patients' relatives, or non-health related research.

CODE 699 Other function – Not further defined

This item is not currently required to be reported by state and territory health authorities.

Comprises other functions that could be a combination of categories 601 to 603 but which could not be further disaggregated.

Underlying cause of death

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Person – underlying cause of death, code (ICD-10 2nd edn) ANN-ANN
<i>Synonymous names:</i>	UCOD code
<i>METeOR identifier:</i>	307931
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The disease or injury which initiated the train of morbid events leading directly to a person's death or the circumstances of the accident or violence which produced the fatal injury, as represented by a code. (WHO 2004)
Data Element Concept:	Person – underlying cause of death

Value domain attributes

Representational attributes

<i>Classification scheme:</i>	International Statistical Classification of Diseases and Related Health Problems, Tenth Revision, (2nd edition)
<i>Representation class:</i>	Code
<i>Data type:</i>	String
<i>Format:</i>	ANN-ANN
<i>Maximum character length:</i>	6

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	Underlying cause of death is central to mortality coding and comparable international mortality reporting.
<i>Comments:</i>	<p>The Australian Bureau of Statistics (ABS) codes and classifies the underlying cause of death (UCOD) according to the rules and guidelines for mortality coding adopted by the World Health Assembly and set out in the World Health Organisation's International Classification of Diseases and Related Health Problems (ICD).</p> <p>The ABS uses the Mortality Medical Data System (MMDS) to process and code cause-of-death information reported on death certificates.</p>

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>CODE 1 Urgency status assigned - emergency</p> <p>Emergency admission:</p> <p>The following guidelines may be used by health professionals, hospitals and health insurers in determining whether an emergency admission has occurred. These guidelines should not be considered definitive.</p> <p>An emergency admission occurs if one or more of the following clinical conditions are applicable such that the patient required admission within 24 hours.</p> <p>Such a patient would be:</p> <ul style="list-style-type: none">• at risk of serious morbidity or mortality and requiring urgent assessment and/or resuscitation; or• suffering from suspected acute organ or system failure; or• suffering from an illness or injury where the viability or function of a body part or organ is acutely threatened; or
-----------------------	--

- suffering from a drug overdose, toxic substance or toxin effect; or
- experiencing severe psychiatric disturbance whereby the health of the patient or other people is at immediate risk; or
- suffering severe pain where the viability or function of a body part or organ is suspected to be acutely threatened; or
- suffering acute significant haemorrhage and requiring urgent assessment and treatment; or
- suffering gynaecological or obstetric complications; or
- suffering an acute condition which represents a significant threat to the patient's physical or psychological wellbeing; or
- suffering a condition which represents a significant threat to public health.

If an admission meets the definition of emergency above, it is categorised as emergency, regardless of whether the admission occurred within 24 hours of such a categorisation being made, or after 24 hours or more.

CODE 2 Urgency status assigned - Elective

Elective admissions:

If an admission meets the definition of elective above, it is categorised as elective, regardless of whether the admission actually occurred after 24 hours or more, or it occurred within 24 hours. The distinguishing characteristic is that the admission could be delayed by at least 24 hours.

Scheduled admissions:

A patient who expects to have an elective admission will often have that admission scheduled in advance. Whether or not the admission has been scheduled does not affect the categorisation of the admission as emergency or elective, which depends only on whether it meets the definitions above. That is, patients both with and without a scheduled admission can be admitted on either an emergency or elective basis.

Admissions from elective surgery waiting lists:

Patients on waiting lists for elective surgery are assigned a Clinical urgency status which indicates the clinical assessment of the urgency with which a patient requires elective hospital care. On admission, they will also be assigned an urgency of admission category, which may or may not be elective:

- Patients who are removed from elective surgery waiting lists on admission as an elective patient for the procedure for which they were waiting (see code 1 in metadata item Reason for removal from an elective surgery waiting list code N) will be assigned an Admission urgency status code N code of 2. In that case, their clinical urgency category could be regarded as further detail on how urgent their admission was.
- Patients who are removed from elective surgery waiting lists on admission as an emergency patient for the procedure for which they were waiting (see code 2 in metadata item Reason for removal from an elective surgery waiting list code N), will be assigned an Admission urgency status code N code of 1.

CODE 3 Urgency status not assigned

Admissions for which an urgency status is usually not assigned are:

- admissions for normal delivery (obstetric)
- admissions which begin with the birth of the patient, or when it was intended that the birth occur in the hospital, commence shortly after the birth of the patient
- statistical admissions
- planned readmissions for the patient to receive limited care or treatment for a current condition, for example dialysis or chemotherapy.

An urgency status can be assigned for admissions of the types listed above for which an urgency status is not usually assigned. For example, a patient who is to have an obstetric admission may have one or more of the clinical conditions listed above and be admitted on an emergency basis.

CODE 9 Not known/not reported

This code is used when it is not known whether or not an urgency status has been assigned, or when an urgency status has been assigned but is not known.

<i>Guide for use:</i>	Record actual result for both right and left eyes: <ul style="list-style-type: none">• 1st field: Right eye• 2nd field: Left eye. Test wearing distance glasses if prescribed. Use pinhole if vision less than 6/6.
-----------------------	---

Collection methods:

One of the most often utilised tests for visual acuity uses the Snellen chart.

- At a distance of 6 metres all subjects should be able to read the 6/6 line with each eye using the proper refractive correction.
- Both eyes are to be opened and then cover one eye with the ocular occluder.
- The observer has to read out the smallest line of letters that he/she can see from the chart.
- This is to be repeated with the other eye.

Eye examination should be performed by an ophthalmologist or a suitably trained clinician:

- within five years of **diagnosis** and then every 1-2 years for patients whose diabetes onset was at age under 30 years
- at diagnosis and then every 1-2 years for patients whose diabetes onset was at age 30 years or more.

<i>Unit of measure:</i>	Centimetre (cm)				

Data element attributes

Collection and usage attributes

<i>Collection methods:</i>	<p>The collection of anthropometric measurements, particularly in those who are overweight or obese or who are concerned about their weight, should be performed with great sensitivity, and without drawing attention to an individual's weight.</p> <p>The measurement protocol described below is that recommended by the World Health Organization (WHO Expert Committee 1995) which was adapted from Lohman et al. (1988) and the International Society for the Advancement of Kinanthropometry as described by Norton et al. (1996).</p> <p>In order to ensure consistency in measurement, the following measurement protocol should be used.</p> <p>Measurement protocol:</p> <p>The measurement of waist circumference requires a narrow (7 mm wide), flexible, inelastic tape measure. The kind of tape used should be described and reported. The graduations on the tape measure should be at 0.1 cm intervals and the tape should have the capacity to measure up to 200 cm. Measurement intervals and labels should be clearly readable under all conditions of use of the tape measure.</p> <p>The subject should remove any belts and heavy outer clothing.</p>
----------------------------	--

Measurement of waist circumference should be taken over at most one layer of light clothing. Ideally the measure is made directly over the skin.

The subject stands comfortably with weight evenly distributed on both feet, and the feet separated about 25-30 cm. The arms should hang loosely at the sides. Posture can affect waist circumference. The measurement is taken midway between the inferior margin of the last rib and the crest of the ilium, in the mid-axillary plane. Each landmark should be palpated and marked, and the midpoint determined with a tape measure and marked.

The circumference is measured with an inelastic tape maintained in a horizontal plane, at the end of normal expiration. The tape is snug, but does not compress underlying soft tissues. The measurer is positioned by the side of the subject to read the tape. To ensure contiguity of the two parts of the tape from which the circumference is to be determined, the cross-handed technique of measurement, as described by Norton et al. (1996), should be used. Ideally an assistant will check the position of the tape on the opposite side of the subject's body.

The measurement is recorded at the end of a normal expiration to the nearest 0.1 cm. Take a repeat measurement and record it to the nearest 0.1 cm. If the two measurements disagree by more than 1 cm, take a third measurement. All raw measurements should be recorded on the data collection form. If practical, it is preferable to enter the raw data into the database as this enables intra-observer and, where relevant, inter-observer errors to be assessed. The subject's measured waist circumference is subsequently calculated as the mean of the two observations, or the mean of the two closest measurements if a third is taken, and recorded on the form. If only a mean value is entered into the database then the data collection forms should be retained.

It may be necessary to round the mean value to the nearest 0.1 cm. If so, rounding should be to the nearest even digit to reduce systematic over-reporting (Armitage & Berry 1994). For example, a mean value of 72.25 cm would be rounded to 72.2 cm, while a mean value of 72.35 cm would be rounded to 72.4 cm.

Validation and quality control measures:

Steel tapes should be checked against a 1 metre engineer's rule every 12 months. If tapes other than steel are used they should be checked daily against a steel rule.

Within- and, if relevant, between-observer variability should be reported. They can be assessed by the same (within-) or different (between-) observers repeating the measurement, on the same subjects, under standard conditions after a short time interval. The standard deviation of replicate measurements (technical error of measurement (Pederson & Gore 1996) between observers should not exceed 2% and be less than 1.5% within observers.

Extreme values at the lower and upper end of the distribution of measured waist circumference should be checked both during data collection and after data entry. Individuals should not be excluded on the basis of true biological difference.

Comments:

Last-digit preference, and preference or avoidance of certain values, should be analysed in the total sample and (if relevant) by observer, survey site and over time if the survey period is long.

This metadata item is recommended for use in population surveys and health care settings.

It is recommended that in population surveys, sociodemographic data including ethnicity should be collected, as well as other risk factors including physiological status (e.g. pregnancy), physical activity, smoking and alcohol consumption. Summary statistics may need to be adjusted for these variables.

National health metadata items currently exist for sex, date of birth, country of birth, Indigenous status and smoking. Metadata items are being developed for physical activity.

Presentation of data:

Means, 95% confidence intervals, medians and centiles should be reported to one decimal place. Where the sample permits, population estimates should be presented by sex and 5-year age groups. However 5-year age groups are not generally suitable for children and adolescents. Estimates based on sample surveys may need to take into account sampling weights.

For consistency with conventional practice, and for current comparability with international data sets, recommended centiles are 5, 10, 15, 25, 50, 75, 85, 90 and 95. To estimate the 5th and 95th centiles, a sample size of at least 200 is recommended for each group for which the centiles are being specified.

For reporting purposes, it may be desirable to present waist circumference in categories. It is recommended that 5-cm groupings are used for this purpose. Waist circumference should not be rounded before categorisation. The following categories may be appropriate for describing the waist circumferences of Australian men, women children and adolescents, although the range will depend on the population.

Waist

35 cm = Waist

40 cm = Waist

... in 5 cm categories

105 cm = Waist

Waist => 110 cm

<i>Supplementary values:</i>											

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	This metadata item cannot be determined if waist circumference measured has not been collected (i.e. is coded to 999.9) and/or sex is not stated (i.e. coded to 9). This metadata item applies to persons aged 18 years or older.
<i>Collection methods:</i>	This metadata item should be derived after the data entry of waist circumference measured. It should be stored on the raw data set as a continuous variable and should not be aggregated or rounded.
<i>Comments:</i>	This metadata item is recommended for use in population surveys and health care settings. Recent evidence suggests that waist circumference may provide a more practical correlate of abdominal fat distribution and associated ill health.

The identification of risk using waist circumference is population-specific and will depend on levels of obesity and other risk factors for cardiovascular disease and non-insulin dependent diabetes mellitus.

Populations differ in the level of risk associated with a particular waist circumference, so that globally applicable cut-off points cannot be developed. For example, complications associated with abdominal fat in black women and those of South Asian descent are markedly higher for a given level of BMI than in Europeans. Also, although women have almost the same absolute risk of coronary heart disease as men at the same WHR, they show increases in relative risk of coronary heart disease at lower waist circumferences than men. Thus, there is a need to develop sex-specific waist circumference cut-off points appropriate for different populations. Hence, the cut-off points used for this metadata item are associated with obesity in Caucasians. This issue is being investigated further.

Cut-off points for children and adolescents are also being developed. Research shows that a high childhood BMI and high trunk skin fold values are predictive of abdominal obesity as an adult and waist circumference measures in childhood track well into adulthood.

It is recommended that in population surveys, sociodemographic data including ethnicity should be collected, as well as other risk factors including physiological status (e.g. pregnancy), physical activity, smoking and alcohol consumption. Summary statistics may need to be adjusted for these variables.

National health metadata item currently exist for sex, date of birth, country of birth and Indigenous status and smoking. Metadata items are being developed for physical activity.

Waist-to-hip ratio

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Adult – waist-to-hip ratio, N.NN
<i>METeOR identifier:</i>	270207
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A ratio calculated by dividing the waist circumference of an adult person by the hip circumference of that same person.
Data Element Concept:	Adult – waist-to-hip ratio

Value domain attributes

Representational attributes

<i>Representation class:</i>	Ratio
<i>Data type:</i>	Number
<i>Format:</i>	N.NN
<i>Maximum character length:</i>	3

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>Formula:</p> <p>WHR = waist circumference (cm) divided by hip circumference (cm).</p> <p>Adult WHR is a continuous variable. Adult WHR cannot be calculated if either component necessary for its calculation (i.e. abdominal circumference or hip circumference) has not been collected (i.e. is coded to 999.9).</p>
<i>Collection methods:</i>	<p>As there are no cut-off points for waist to hip ratio for children and adolescents, it is not necessary to calculate this item for those aged under 18 years.</p> <p>Waist-to-hip ratio (WHR) should be derived after the data entry of waist circumference and hip circumference. It should be stored on the raw data set as a continuous variable and should not be aggregated or rounded.</p>
<i>Comments:</i>	<p>Adult cut-off points for WHR, that may define increased risk of cardiovascular disease and all cause mortality, range from 0.9 to 1.0 for men and 0.8 to 0.9 for women (Croft et al. 1995, Bray 1987, Bjorntorp 1985). These values are based primarily on evidence of increased risk of death in European populations, and may not be appropriate for all age and ethnic groups.</p> <p>In Australia and New Zealand, the cutoffs of >0.9 for males and >0.8 for females were used in the Australian Bureau of Statistics' 1995 National Nutrition Survey.</p> <p>This metadata item applies to persons aged 18 years or older as</p>

no cut off points have been developed for children and adolescents. It is recommended for use in population surveys and health care settings.

More recently it has emerged that waist circumference alone, or in combination with other metabolic measures, is a better indicator of risk and reduces the errors in WHR measurements. WHR is therefore no longer a commonly used measure.

It is recommended that in population surveys, sociodemographic data including ethnicity should be collected, as well as other risk factors including physiological status (e.g. pregnancy), physical activity, smoking and alcohol consumption. Summary statistics may need to be adjusted for these variables.

Body fat distribution has emerged as an important predictor of obesity-related morbidity and mortality. Abdominal obesity, which is more common in men than women, has, in epidemiological studies, been closely associated with conditions such as coronary heart disease, stroke, non-insulin dependent diabetes mellitus and high blood pressure.

Waist- to-hip ratio (WHR) can be used:

- to indicate the prevalence of abdominal obesity and its sociodemographic distribution (problem identification)
- to evaluate health promotion and disease prevention programs (assessment of interventions)
- to monitor progress towards national public health policy
- to ascertain determinants and consequences of abdominal obesity - in nutrition and physical activity surveillance and long-term planning.

Presentation of data:

Means, 95% confidence intervals, medians and centiles should be reported to one decimal place. Where the sample permits, population estimates should be presented by sex and 5-year age groups. Estimates based on sample surveys may need to take into account sampling weights.

For consistency with conventional practice, and for current comparability with international data sets, recommended centiles are 5, 10, 15, 25, 50, 75, 85, 90 and 95. To estimate the 5th and 95th centiles, a sample size of at least 200 is recommended for each group for which the centiles are being specified.

<i>Maximum character length:</i>	4
<i>Unit of measure:</i>	Day

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	<p>The number of days is calculated by subtracting the Elective care waiting list episode – listing date for care, DDMMYYYY from the Hospital census (of elective surgery waitlist patients) – census date, DDMMYYYY, minus any days when the patient was ‘not ready for care’, and also minus any days the patient was waiting with a less urgent clinical urgency category than their clinical urgency category at the census date.</p> <p>Days when the patient was not ready for care is calculated by subtracting the date(s) the person was recorded as ‘not ready for care’ from the date(s) the person was subsequently recorded as again being ‘ready for care’.</p> <p>If, at any time since being added to the waiting list for the elective surgical procedure, the patient has had a less urgent clinical urgency category than the category at the census date, then the number of days waited at the less urgent Elective surgery waiting list episode – clinical urgency, code N category should be subtracted from the total number of days waited.</p> <p>In cases where there has been only one category reassignment (i.e. to the more urgent category attached to the patient at census date) the number of days at the less urgent clinical urgency</p>
-----------------------	---

category should be calculated by subtracting the Elective care waiting list episode – listing date for care, DDMMYYYY from the Elective care waiting list episode – category reassignment date, DDMMYYYY. If the patient’s clinical urgency was reclassified more than once, days spent in each period of less urgent clinical urgency than the one applying at the census date should be calculated by subtracting one Elective care waiting list episode – category reassignment date, DDMMYYYY from the subsequent Elective care waiting list episode – category reassignment date, DDMMYYYY, and then adding the days together.

When a patient is admitted from an elective surgery waiting list but the surgery is cancelled and the patient remains on or is placed back on the waiting list within the same hospital, the time waited on the list should continue. Therefore at the census date the patient’s waiting time includes the number of days waited on an elective surgery waiting list, both before and after any cancelled surgery admission. The time waited before the cancelled surgery should be counted as part of the total time waited by the patient.

Comments:

Elective surgery waiting times data collections include measures of waiting times at removal and at designated census dates. This metadata item is used to measure waiting times at a designated census date whereas the metadata item Elective surgery waiting list episode – waiting time (at removal), total days N[NNN] measures waiting times at removal.

The calculation of waiting times for patients who are transferred from an elective surgery waiting list managed by one public acute hospital to another will be investigated in the future. In this case, the amount of time waited on previous lists should follow the patient to the next. Therefore at the census date, their waiting time includes the total number of days on all lists (less days not ready for care and days in lower urgency categories).

This is a critical elective surgery waiting times metadata item. It is used to determine whether patients are overdue, or had extended waits at a census date. It is used to assist doctors and patients in making decisions about hospital referral, to assist in the planning and management of hospitals and in health care related research.

urgency was reclassified more than once, days spent in each period of less urgent clinical urgency than the one applying at removal should be calculated by subtracting one category reassignment date from the subsequent category reassignment date, and then adding the days together.

When a patient is removed from an elective surgery waiting list, for admission on an elective basis for the procedure they were awaiting, but the surgery is cancelled and the patient remains on or is placed back on the waiting list within the same hospital, the time waited on the list should continue.

Therefore at the removal date, the patient's waiting time includes the number of days waited on an elective surgery waiting list, both before and after any cancelled surgery admission. The time waited before the cancelled surgery should be counted as part of the total time waited by the patient.

Comments:

Elective surgery waiting times data collections include measures of waiting times at removal and at designated census dates. This metadata item is used to measure waiting times at removal whereas the metadata item waiting time at a census date measures waiting times at a designated census date.

The calculation of waiting times for patients, who are transferred from an elective surgery waiting list managed by one public acute hospital to another, will be investigated in the future. In this case, the amount of time waited on previous lists would follow the patient to the next. Therefore when the patient is removed from the waiting list (for admission or other reason), their waiting time would include the total number of days on all lists (less days not ready for care and days in lower urgency categories).

This is a critical elective surgery waiting times metadata item. It is used to determine whether patients were overdue, or had extended waits when they were removed from the waiting list. It is used to assist doctors and patients in making decisions about hospital referral, to assist in the planning and management of hospitals and in health care related research.

<i>Guide for use:</i>	CODE 888 Unknown Use this code if self-reported body mass (weight) is unknown.
	CODE 999 Not stated Use this code if self-reported body mass (weight) is not responded to.

Data element attributes

Collection and usage attributes

<i>Collection methods:</i>	<p>The method of data collection, e.g. face to face interview, telephone interview or self-completion questionnaire, can affect survey estimates and should be reported.</p> <p>The data collection form should include a question asking the respondent what their weight is. For example, the ABS National Health Survey 1989-90 included the question 'How much do you weigh without clothes and shoes?'. The data collection form should allow for both metric (to the nearest 1 kg) and imperial (to the nearest 1 lb) units to be recorded.</p> <p>If practical, it is preferable to enter the raw data into the data base before conversion of measures in imperial units to metric. However, if this is not possible, weight reported in imperial units can be converted to metric prior to data entry using a conversion factor of 0.454 kg to the lb.</p>
----------------------------	---

Rounding to the nearest 1 kg will be required for measures converted to metric prior to data entry, and may be required for data reported in metric units to a greater level of precision than the nearest 1 kg. The following rounding conventions are desirable to reduce systematic over reporting (Armitage and Berry 1994):

nnn.x where x

nnn.x where $x > 5$ - round up, e.g. 72.7 kg would be rounded to 73 kg.

nnn.x where $x = 5$ - round to the nearest even number, e.g. 72.5 kg would be rounded to 72 kg, while 73.5 kg would be rounded to 74 kg.

Comments:

This metadata item is recommended for persons aged 18 years or older. It is recommended for use in population surveys when it is not possible to measure weight.

It is recommended that in population surveys, sociodemographic data including ethnicity should be collected, as well as other risk factors including physiological status (e.g. pregnancy), physical activity, smoking and alcohol consumption. Summary statistics may need to be adjusted for these variables. Metadata items currently exist for sex, date of birth, country of birth, Indigenous status and smoking. Metadata items are being developed for physical activity.

Presentation of data:

Means and 95% confidence intervals, medians and centiles should be reported to one decimal place. Where the sample permits, population estimates should be presented by sex and 5-year age groups. Estimates based on sample surveys may need to take into account sampling weights.

For consistency with conventional practice, and for current comparability with international data sets, recommended centiles are 5, 10, 15, 25, 50, 75, 85, 90 and 95. To estimate the 5th and 95th centiles, a sample size of at least 200 is recommended for each group for which the centiles are being specified.

For some reporting purposes, it may be desirable to present weight data in categories. It is recommended that 5 kg groupings are used for this purpose. Weight data should not be rounded before categorisation. The following categories may be appropriate for describing the weights of Australian men and women, although the range will depend on the population. The World Health Organization's range for weight is 30-140 kg.

Weight

30 kg = Weight

35 kg = Weight

... in 5 kg categories

135 kg = Weight

Weight => 140 kg

On average, body mass (weight) tends to be underestimated when self-reported by respondents. Data for men and women

aged 20-69 years in 1989 indicated that men underestimated by an average of 0.2 kg (sem of 0.05 kg) and women by an average of 0.4 kg (sem of 0.04 kg) (Waters 1993). The extent of underestimation varied with age.

-----------------------	---

Data element attributes

Collection and usage attributes

<i>Guide for use:</i>	In order to ensure consistency in measurement, the measurement protocol described under Collection methods should be used.
<i>Collection methods:</i>	<p>The collection of anthropometric measurements, particularly in those who are overweight or obese or who are concerned about their weight, should be performed with great sensitivity and without drawing attention to an individual's weight.</p> <p>The measurement protocol described below is that recommended by the WHO Expert Committee (1995).</p> <p>Measurement protocol:</p> <p>Equipment used should be described and reported. Scales should have a resolution of at least 0.1kg and should have the capacity to weigh up to at least 200 kg. Measurement intervals and labels should be clearly readable under all conditions of use of the</p>

instrument. Scales should be capable of being calibrated across the entire range of measurements. Precision error should be no more than 0.1kg. Scales should be calibrated on each day of use. Manufacturers' guidelines should be followed with regard to the transportation of the scales.

Adults and children who can stand:

The subject stands over the centre of the weighing instrument, with the body weight evenly distributed between both feet.

Heavy jewellery should be removed and pockets emptied. Light indoor clothing can be worn, excluding shoes, belts, and sweater. Any variations from light indoor clothing (e.g. heavy clothing, such as kaftans or coats worn because of cultural practices) should be noted on the data collection form. Adjustments for non-standard clothing (i.e. other than light indoor clothing) should only be made in the data checking/cleaning stage prior to data analysis.

If the subject has had one or more limbs amputated, record this on the data collection form and weigh them as they are. If they are wearing an artificial limb, record this on the data collection form but do not ask them to remove it. Similarly, if they are not wearing the limb, record this but do not ask them to put it on.

The measurement is recorded to the nearest 0.1 kg. If the scales do not have a digital readout, take a repeat measurement. If the two measurements disagree by more than 0.5 kg, then take a third measurement. All raw measurements should be recorded on the data collection form. If practical, it is preferable to enter the raw data into the database as this enables intra-observer and, where relevant, inter-observer errors to be assessed. The subject's measured weight is subsequently calculated as the mean of the two observations, or the mean of the two closest measurements if a third is taken, and recorded on the form. If only a mean value is entered into the database then the data collection forms should be retained.

It may be necessary to round the mean value to the nearest 0.1 kg. If so, rounding should be to the nearest even digit to reduce systematic over reporting (Armitage and Berry 1994). For example, a mean value of 72.25 kg would be rounded to 72.2 kg, while a mean value of 72.35 kg would be rounded to 72.4 kg.

Infants:

Birth weight and gender should be recorded with gestational age. During infancy a levelled pan scale with a bean and movable weights or digital scales capable of measuring to two decimal places of a kilogram are acceptable. Birth weight should be determined within 12 hours of birth. The infant, with or without a nappy or diaper is placed on the scales so that the weight is distributed equally about the centre of the pan. When the infant is lying or suspended quietly, weight is recorded to the nearest 10 grams. If the nappy or diaper is worn, its weight is subtracted from the observed weight i.e. reference data for infants are based on nude weights.

Validation and quality control measures:

If practical, equipment should be checked daily using one or more objects of known weight in the range to be measured. It is recommended that the scale be calibrated at the extremes and in the mid range of the expected weight of the population being studied.

Within- and, if relevant, between-observer variability should be reported. They can be assessed by the same (within-) or different (between-) observers repeating the measurement of weight, on the same subjects, under standard conditions after a short time interval. The standard deviation of replicate measurements (technical error of measurement) between observers should not exceed 0.5 kg and be less than 0.5 kg within observers.

Extreme values at the lower and upper end of the distribution of measured height should be checked both during data collection and after data entry. Individuals should not be excluded on the basis of true biological difference.

Last digit preference, and preference or avoidance of certain values, should be analysed in the total sample and (if relevant) by observer, survey site and over time if the survey period is long.

This metadata item applies to persons of all ages. It is recommended for use in population surveys and health care settings.

It is recommended that in population surveys, sociodemographic data including ethnicity should be collected, as well as other risk factors including physiological status (e.g. pregnancy), physical activity, smoking and alcohol consumption. Summary statistics may need to be adjusted for these variables.

Metadata items currently exist for sex, date of birth, country of birth, Indigenous status and smoking. Metadata items are being developed for physical activity.

Presentation of data:

Means and 95% confidence intervals, medians and centiles should be reported to one decimal place. Where the sample permits, population estimates should be presented by sex and 5-year age groups. However 5-year age groups are not generally suitable for children and adolescents. Estimates based on sample surveys may need to take into account sampling weights.

For consistency with conventional practice, and for current comparability with international data sets, recommended centiles are 5, 10, 15, 25, 50, 75, 85, 90 and 95. To estimate the 5th and 95th centiles, a sample size of at least 200 is recommended for each group for which the centiles are being specified.

For some reporting purposes, it may be desirable to present weight data in categories. It is recommended that 5 kg groupings are used for this purpose. Weight data should not be rounded before categorisation. The following categories may be appropriate for describing the weights of Australian men, women, children and adolescents, although the range will depend on the population.

Comments:

Weight
10 kg = Weight
15 kg = Weight
... in 5 kg categories
135 kg = Weight
Weight => 140 kg

Collection and usage attributes

<i>Guide for use:</i>	CODE A01 SOLO PRIVATE PRACTICE Solo private practice includes all private practices owned and operated by a single health practitioner, excluding locum practices.
-----------------------	---

CODE A02 GROUP PRIVATE PRACTICE

Group private practice includes all private practices owned and operated by a partnership of more than one health practitioner excluding locum practices.

CODE A03 LOCUM PRIVATE PRACTICE

Locum private practice includes all private practices where the primary business of the practice is the provision of locum or relief services.

CODE B00 ABORIGINAL HEALTH SERVICE

Aboriginal health services include all non-residential health care services with a primary focus on the delivery of health care to Indigenous people.

CODE C05 HEALTH PROMOTION SERVICE

Health promotion service includes those services primarily engaged in the provision of information and education to improve dental health and prevent disease.

CODE C07 OTHER COMMUNITY HEALTH CARE SERVICE

Other community health care service includes all non-residential health care services not mentioned above.

CODE D00 HOSPITAL

Hospitals include acute care, psychiatric and dental hospitals as well as emergency departments and outpatient clinics. This category excludes hospitals provided by Defence Department.

CODE E00 RESIDENTIAL HEALTH CARE FACILITIES

Residential health care facilities include residential aged care, hospices, residential mental health care, residential drug rehabilitation and disability institutions.

CODE F00 COMMERCIAL/BUSINESS SERVICES

Commercial/business includes insurance providers, pathology laboratories, banks and pharmaceutical manufacturers, wholesalers and retailers. This category excludes private practices.

CODE G01 TERTIARY EDUCATIONAL FACILITY

Tertiary educational facility includes all educational institutions mainly engaged in providing undergraduate or postgraduate teaching, or vocational education and training.

CODE G02 SCHOOL

Schools include all pre-primary, primary and secondary schools.

CODE G03 OTHER EDUCATIONAL FACILITY

Other educational facility includes all organisations primarily involved in the delivery of education and training but not mentioned above.

CODE H00 CORRECTIONAL SERVICES

Correctional services include jails and detention centres.

CODE I00 DEFENCE SERVICES

Defence forces include all facilities operated by the Australian

Government Department of Defence.

CODE J00 OTHER GOVERNMENT DEPARTMENT OR AGENCY

Other government department or agency includes all government facilities not specified above including laboratories and research organisations.

CODE Y00 OTHER

Other includes all organisations not specified above.

CODE B00 ABORIGINAL HEALTH SERVICE

Aboriginal health services include all non-residential health care services with a primary focus on the delivery of health care to Indigenous people.

CODE C00 COMMUNITY HEALTH CARE SERVICES

Community health care services include ambulatory centres, day procedure centres and community health centres. This category excludes non-residential health care provided by private practices and the defence department, and aboriginal health services.

CODE D00 HOSPITAL

Hospitals include acute care, psychiatric and dental hospitals as well as emergency departments and outpatient clinics. This category excludes hospitals provided by Defence Department.

CODE E00 RESIDENTIAL HEALTH CARE FACILITIES

Residential health care facilities include residential aged care, hospices, residential mental health care, residential drug rehabilitation and disability institutions.

CODE F01 RETAIL PHARMACY

Businesses mainly engaged in retailing prescription drugs or patent medicines, cosmetics and/or toiletries.

CODE F02 WHOLESALE PHARMACY

Businesses mainly engaged in wholesaling prescription drugs or patent medicines, cosmetics or toiletries.

CODE F03 PHARMACEUTICS MANUFACTURING

Businesses mainly engaged in manufacturing pharmaceutical and medicinal products. It also includes businesses mainly engaged in manufacturing diagnostic substances for antibodies, antigens and chemical/diagnostic testing agents.

CODE F05 OTHER COMMERCIAL/BUSINESS

Other commercial/business includes all other commercial/business settings not included above.

CODE G00 EDUCATIONAL FACILITY

Educational facility includes schools, universities, vocational education and training institutions.

CODE H00 CORRECTIONAL SERVICES

Correctional services include jails and detention centres.

CODE I00 DEFENCE FORCES

Defence forces include all facilities operated by the Australian Government Department of Defence.

CODE J00 OTHER GOVERNMENT DEPARTMENT OR AGENCY

Other government department or agency includes all

government facilities not specified above including laboratories and research organisations.

CODE Y00 OTHER

Other includes all organisations not specified above.

Guide for use:

CODE A01 SOLO PRIVATE PRACTICE

Solo private practice includes all private practices owned and operated by a single health practitioner, excluding locum practices.

CODE A02 GROUP PRIVATE PRACTICE

Group private practice includes all private practices owned and operated by a partnership of more than one health practitioner excluding locum practices.

CODE A03 LOCUM PRIVATE PRACTICE

Locum private practice includes all private practices where the primary business of the practice is the provision of locum or relief services.

CODE B00 ABORIGINAL HEALTH SERVICE

Aboriginal health services include all non-residential health care services with a primary focus on the delivery of health care to Indigenous people

CODE C01 DOMICILIARY SERVICE

Domiciliary service includes all services primarily providing nursing or other professional paramedical care or treatment and non-qualified domestic assistance to people in their own homes.

CODE C06 REHABILITATION/PHYSICAL DEVELOPMENT SERVICE

Rehabilitation/physical development service includes all organisations that primarily engage in specialist rehabilitation and physical development assistance services.

CODE C07 OTHER COMMUNITY HEALTH CARE SERVICES

Other community health care services includes all non-residential health care services not mentioned above.

CODE D01 OUTPATIENT SERVICE

Outpatient services include all hospital-based clinics that provide specialist outpatient services to non-admitted, non-emergency department patients.

CODE D02 OTHER HOSPITAL SERVICE

This category includes all other hospital services including acute care, psychiatric and dental hospitals, as well as emergency departments. It excludes hospitals provided by Defence Department.

CODE E01 RESIDENTIAL AGED CARE FACILITIES

Residential aged care facilities include all residential health care facilities that primarily engage in the delivery of aged health care.

CODE E05 OTHER RESIDENTIAL HEALTH CARE FACILITY

This category includes all other residential health care facilities not specified above.

CODE F04 SPORTS CENTRE/CLINIC

Sports centres/clinics primarily provide professional services for

the prevention and treatment of injuries and diseases related to participation in sports.

CODE F05 OTHER COMMERCIAL/BUSINESS SERVICE

Other commercial/business includes all other commercial/business settings not included above

CODE G00 EDUCATIONAL FACILITY

Educational facility includes schools, universities, vocational education and training institutions.

CODE H00 CORRECTIONAL SERVICES

Correctional services include jails and detention centres.

CODE I00 DEFENCE FORCES

Defence forces include all facilities operated by the Australian Government Department of Defence.

CODE J00 OTHER GOVERNMENT DEPARTMENT OR AGENCY

Other government department or agency includes all government facilities not specified above including laboratories and research organisations.

Year of arrival in Australia

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Element
<i>Technical name:</i>	Person – year of first arrival in Australia, date YYYY
<i>METeOR identifier:</i>	269929
<i>Registration status:</i>	Health, Standard 04/05/2005 Community services, Standard 01/03/2005
<i>Definition:</i>	The year a person (born outside of Australia) first arrived in Australia, from another country, with the intention of staying in Australia for one year or more.
Data Element Concept:	Person – year of first arrival in Australia

Value domain attributes

Representational attributes

<i>Representation class:</i>	Date
<i>Data type:</i>	Date/Time
<i>Format:</i>	YYYY
<i>Maximum character length:</i>	4

Data element attributes

Collection and usage attributes

<i>Collection methods:</i>	Actual year of arrival in Australia. Recommended question: In what year did you/the person first arrive in Australia to live here for one year or more? (Write in the calendar year of arrival or mark the box if here less than one year) Calendar year of arrival Will be here less than one year It is anticipated that for the majority of people their response to the question will be the year of their only arrival in Australia. However, some respondents may have multiple arrivals in Australia. To deal with these cases in self-enumerated collections, an instruction such as 'Please indicate the year of first arrival only' should be included with the question. While agencies are encouraged to use the recommended question described above, it is acknowledged that this is not always possible in practice. For example, where the data collection is a by-product of the provision of a health or community service, the information may be ascertained using different means. However, the recommended question should be used wherever practically possible.

National minimum data sets

Admitted patient care NMDS 2010–2011

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	386797
<i>Registration status:</i>	Health, Standard 22/12/2009
<i>DSS type:</i>	National Minimum Data Set (NMDS)
<i>Scope:</i>	<p>The purpose of this National Minimum Data Set is to collect information about care provided to admitted patients in Australian hospitals.</p> <p>The scope is episodes of care for admitted patients in all public and private acute and psychiatric hospitals, free standing day hospital facilities and alcohol and drug treatment centres in Australia. Hospitals operated by the Australian Defence Force, corrections authorities and in Australia's off-shore territories may also be included. Hospitals specialising in dental, ophthalmic aids and other specialised acute medical or surgical care are included.</p> <p>Hospital boarders and still births are not included as they are not admitted to hospital. Posthumous organ procurement episodes are also not included.</p>

Collection and usage attributes

<i>Statistical unit:</i>	Episodes of care for admitted patients
<i>Collection methods:</i>	<p>Data are collected at each hospital from patient administrative and clinical record systems. Hospitals forward data to the relevant state or territory health authority on a regular basis (e.g. monthly).</p> <p><i>National reporting arrangements</i></p> <p>State and territory health authorities provide the data to the Australian Institute of Health and Welfare for national collation, on an annual basis.</p> <p><i>Periods for which data are collected and nationally collated</i></p> <p>Financial years ending 30 June each year.</p>
<i>Implementation start date:</i>	01/07/2010

Elective surgery waiting times (census data) NMDS 2009–

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	375331
<i>Registration status:</i>	Health, Standard 03/12/2008
<i>DSS type:</i>	National Minimum Data Set (NMDS)
<i>Scope:</i>	<p>The scope of this minimum data set is patients on waiting lists for elective surgery (as defined in the 'Elective care waiting list episode – elective care type, code N' data element (also referred to by the short name 'Waiting list category') which are managed by public acute hospitals. This will include private patients treated in public hospitals, and may include public patients treated in private hospitals.</p> <p>Hospitals may also collect information for other care (as defined in the Waiting list category data element), but this is not part of the National Minimum Data Set (NMDS) for Elective surgery waiting times.</p> <p>Patients on waiting lists managed by hospitals operated by the Australian Defence Force, corrections authorities and Australia's external territories are not currently included.</p> <p>Census data:</p> <p>Data are collected for patients on elective surgery waiting lists who are yet to be admitted to hospital or removed for another reason. The scope is patients on elective surgery waiting lists on a census date who are 'ready for care' as defined in the Elective surgery waiting list episode – patient listing status, readiness for care code N data element.</p>

Collection and usage attributes

<i>Statistical unit:</i>	Patients on waiting lists on census dates.
<i>Collection methods:</i>	<p>Elective care waiting list episode – category reassignment date, DDMMYYYY is not required for reporting to the NMDS, but is necessary for the derivation of Elective surgery waiting list episode – waiting time (at a census date), total days N[NNN].</p> <p>Elective care waiting list episode – elective care type, code N and Elective surgery waiting list episode – patient listing status, readiness for care code N are not required for reporting to the NMDS, but are necessary for determining whether patients are in scope for the NMDS. These data elements should be collected at the local level and reported to state and territory health authorities as required.</p> <p><i>National reporting arrangements</i></p> <p>State and territory health authorities provide the data to the Australian Institute of Health and Welfare for national collation, on an annual basis.</p> <p><i>Periods for which data are collected and nationally collated</i></p> <p>Census dates are 30 September, 31 December, 31 March and 30 June.</p>

Implementation start date: 30/06/2009

Comments: There are two different types of data collected for this national minimum data set (census data and removals data) and the scope and list of data elements associated with each is different.

For the purposes of this NMDS, public hospitals include hospitals which are set up to provide services for public patients (as public hospitals do), but which are managed privately.

The inclusion of public patients removed from elective surgery waiting lists managed by private hospitals will be investigated in the future.

Mental health establishments NMDS 2010–2011

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	378611
<i>Registration status:</i>	Health, Standard 02/12/2009
<i>DSS type:</i>	National Minimum Data Set (NMDS)
<i>Scope:</i>	<p>The scope of the MHE National Minimum Data Set (NMDS) is all specialised mental health services managed by, or in receipt of funds, from state or territory health authorities.</p> <p>Specialised mental health services are those with a primary function to provide treatment, rehabilitation or community health support targeted towards people with a mental disorder or psychiatric disability. These activities are delivered from a service or facility that is readily identifiable as both specialised and serving a mental health care function.</p> <p>The concept of a specialised mental health service is not dependent on the inclusion of the service within the state or territory mental health budget.</p> <p>A service is not defined as a specialised mental health service solely because its clients include people affected by a mental illness or psychiatric disability. The definition excludes specialist drug and alcohol services for people with intellectual disabilities, except where they are established to assist people affected by a mental disorder who also have drug and alcohol related disorders or intellectual disability.</p> <p>These services can be a sub-unit of a hospital even where the hospital is not a specialised mental health establishment itself (e.g. designated psychiatric units and wards, outpatient clinics etc).</p> <p>The statistical units are specialised mental health services. These are the specialised mental health components of the state and territory health authorities, and of regions within states and territories; specialised mental health service organisations; service units within those organisations; and private hospital and non-government residential service units funded by specialised mental health services.</p> <p>Non-government residential mental health services and specialised mental health services provided by private hospitals that receive state or territory government funding are included as service units for this NMDS.</p> <p>There is a hierarchy of statistical units used within the MHE NMDS. Information is provided at each level: State/Territory; Region; Organisation; Hospital/Service unit cluster; and Service unit (Admitted patient services, Residential services and Ambulatory services). Each level has a unique set of attributes which comprise the NMDS data elements and additional supplementary information.</p>

Non-admitted patient emergency department care NMDS 2010–2011

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	374220
<i>Registration status:</i>	Health, Standard 22/12/2009
<i>DSS type:</i>	National Minimum Data Set (NMDS)
<i>Scope:</i>	<p>This metadata set is nationally mandated for collection and reporting.</p> <p>The scope of this National Minimum Data Set (NMDS) is non-admitted patients registered for care in emergency departments in selected public hospitals that are classified as either Peer Group A or B in the Australian Institute of Health and Welfare's Australian Hospital Statistics publication from the preceding financial year.</p> <p>The care provided to patients in emergency departments is, in most instances, recognised as being provided to 'non-admitted' patients. Patients being treated in emergency departments may subsequently become 'admitted'. The care provided to non-admitted patients who are treated in the emergency department prior to being admitted is included in this NMDS.</p> <p>Care provided to patients who are being treated in an emergency department site as an admitted patient (e.g. in an observation unit, short-stay unit, 'emergency department ward' or awaiting a bed in an admitted patient ward of the hospital) are excluded from the emergency department care NMDS since the recording of the care provided to these patients is part of the scope of the Admitted patient care NMDS.</p>

Collection and usage attributes

<i>Statistical unit:</i>	Non-admitted patient emergency department service episodes.
<i>Collection methods:</i>	<p>National reporting arrangements</p> <p>State and territory health authorities provide the NMDS data to the Australian Institute of Health and Welfare for national collation, on an annual basis within 3 months of the end of a reporting period.</p> <p>The Institute and the Commonwealth Department of Health and Ageing will agree on a data quality and timeliness protocol. Once cleaned, a copy of the data and a record of the changes made will be forwarded by the Institute to the Commonwealth Department of Health and Ageing. A copy of the cleaned data for each jurisdiction should also be returned to that jurisdiction on request.</p> <p>Periods for which data are collected and nationally collated</p> <p>Financial years, ending 30 June each year. Extraction of data for a financial year should be based on the date of the end of the non-admitted emergency department service episode.</p>
<i>Implementation start date:</i>	01/07/2010

Comments:

Scope links with other metadata sets

Episodes of care for admitted patients are reported through the Admitted patient care NMDS.

Outpatient care NMDS

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	336862
<i>Registration status:</i>	Health, Standard 04/07/2007
<i>DSS type:</i>	National Minimum Data Set (NMDS)
<i>Scope:</i>	The scope of this National Minimum Data Set (NMDS) is for services provided to non-admitted, non-emergency department, patients registered for care by specialist outpatient clinics of public hospitals that are classified as either principal referral and specialist women's and children's hospitals and large hospitals (Peer Group A or B) as reported in the Australian Institute of Health and Welfare's Australian Hospital Statistics publication from the preceding financial year.

Hospitals use the term 'clinic' to describe various arrangements under which they deliver specialist outpatient services to non-admitted non-emergency department patients. **Outpatient clinic services** should be interpreted as encompassing services provided through specific organisational units staffed to administer and provide a certain range of outpatient care:

- in defined locations;
- at regular or irregular times; and
- where one or more specialist providers deliver care to booked patients.

Generally, in such clinics, a booking system is administered and patient records are maintained to document patient attendances and care provided.

The scope includes all arrangements made to deliver specialist care to non-admitted, non-emergency department patients whose treatment has been funded through the hospital, regardless of the source from which the hospital derives these funds. In particular, Department of Veterans' Affairs, compensable and other patients **funded through the hospital** (including Medicare ineligible patients) are included.

For the purposes of the Outpatient care NMDS, outreach services are counted at the specialist clinic where the patient is booked. Outreach services involve travel by the service provider, or services provided by a service provider via ICT (including but not limited to telephone and telehealth consultations). Such services may also be provided in the home, place of work or other non-hospital site.

Within the scope as defined, and subject to specific counting rules, occasions of service to be counted include outreach clinic services, services delivered in a multidisciplinary mode. A separate count of services delivered in group sessions is also collected.

Excluded from scope are:

- Outreach services which are not funded through the hospital and/or which deliver non-clinical care (activities such as home cleaning, meals on wheels, home maintenance); and

- All private specialist services delivered under private practice arrangements which are not funded through the hospital, regardless of whether or how these services may be funded by third party arrangements.
- All services covered by NMDS for:
 - Admitted Patient Care,
 - Admitted patient mental health care,
 - Alcohol and other drug treatment services,
 - Community mental health care,
 - Non-admitted patient emergency department.

Admitted patient services are excluded from scope. However, outpatient services booked for reasons independent of, or distinct from the admitted patient episode are in scope.

Collection and usage attributes

Statistical unit: Occasions of service.

Group sessions.

Collection methods:

National reporting arrangements:

State and territory Health authorities provide the data to the Department of Health and Ageing and Australian Institute of Health and Welfare on an annual basis by 31 December each calendar year, for the previous financial year.

Periods for which data are collected and nationally collated:

Each financial year ending 30 June.

Implementation start date: 01/07/2007

Residential mental health care NMDS 2010–2011

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	386809
<i>Registration status:</i>	Health, Standard 05/01/2010
<i>DSS type:</i>	National Minimum Data Set (NMDS)
<i>Scope:</i>	Episodes of residential care for residents in all government-funded residential mental health care services in Australia, except those residential care services that are in receipt of funding under the Aged Care Act and subject to Commonwealth reporting requirements (i.e. report to the System for the payment of Aged Residential Care (SPARC) collection).

Collection and usage attributes

<i>Statistical unit:</i>	Episodes of residential care. Statistical units are entities from or about which statistics are collected, or in respect of which statistics are compiled, tabulated or published.
<i>Collection methods:</i>	Data are collected at each service from resident administrative and care related record systems. Services forward data to the relevant state or territory health authority on a regular basis (e.g. monthly). National reporting arrangements State and territory health authorities provide the data to the Australian Institute of Health and Welfare for national collection, on an annual basis. Government-operated services that employ mental health trained staff on-site 24 hours per day are to be included from 1 July 2004. Government-funded, non-government operated services and non 24-hour staffed services can be included from 1 July 2004, optionally. For non 24-hour staffed services to be included they must employ mental health-trained staff on-site at least 50 hours per week with at least 6 hours staffing on any single day. Periods for which data are collected and nationally collated Financial years ending 30 June each year. The reference period starts on 1 July and ends on 30 June each year.
<i>Implementation start date:</i>	01/07/2010
<i>Comments:</i>	Some admitted patient care services may meet the definition of a residential mental health service. However, as they are admitted patient care services, relevant data on their patients are reported to the National Minimum Data Set for Admitted Patient Care.

Acute coronary syndrome (clinical) DSS

Identifying and definitional attributes

Metadata item type: Data Set Specification

METeOR identifier: 372930

Registration status: Health, Standard 01/10/2008

DSS type: Data Set Specification (DSS)

Scope: This Acute Coronary Syndrome (ACS) data set specification is not mandated for collection but is recommended as best practice if ACS data are to be collected. This data set specification enables individual hospitals or health service areas to develop collection methods and policies appropriate for their service.

The scope for the ACS data set specification is to collect data on the period between when a person with ACS symptoms was first referred to a hospital or directly presented at a hospital, and when a person leaves the hospital, either from the emergency department or is discharged from the hospital. Some of the data relevant to the management of patients attending hospital with ACS symptoms is specified for collection at follow-up visits with a specialist or as a non-admitted patient.

Acute coronary syndromes reflect the spectrum of coronary artery disease resulting in acute myocardial ischaemia, and span unstable angina, non-ST segment elevation myocardial infarction (NSTEMI) and ST-segment elevation myocardial infarction (STEMI). Clinically these diagnoses encompass a wide variation in risk, require complex and time urgent risk stratification and represent a large social and economic burden.

The definitions used in this data set specification are designed to underpin the data collected by health professionals in their day-to-day acute care practice. They relate to the realities of an acute clinical consultation for patients presenting with chest pain/ discomfort and the need to correctly identify, evaluate and manage patients at increased risk of a coronary event.

The data elements specified in this metadata set provide a framework for:

- promoting the delivery of evidenced-based acute coronary syndrome management care to patients;
- facilitating the ongoing improvement in the quality and safety of acute coronary syndrome management in acute care settings in Australia and New Zealand;
- improving the epidemiological and public health understanding of this syndrome; and
- supporting acute care services as they develop information systems to complement the above.

This is particularly important as the scientific evidence supporting the development of the data elements within the ACS data set specification indicate that accurate identification of the evolving myocardial infarction patient or the high/intermediate risk patient

leading to the implementation of the appropriate management pathway impacts on the patient's outcome. Having a nationally recognised set of definitions in relation to defining a patient's diagnosis, risk status and outcomes is a prerequisite to achieving the above aims.

The ACS data set specification is based on the American College of Cardiology (ACC) Data Set for Acute Coronary Syndrome as published in the Journal of the American College of Cardiology in December 2001 (38:2114-30) as well as more recent scientific evidence around the diagnosis of myocardial infarction presented in the National Heart Foundation of Australia/Cardiac Society of Australia and New Zealand Guidelines for the management of acute coronary syndromes (MJA 2006;184;S1-S32). The data elements are alphabetically listed and grouped in a similar manner to the American College of Cardiology's data set format. These features of the Australian ACS data set should ensure that the data is internationally comparable.

Many of the data elements in this data set specification may also be used in the collection of other cardiovascular clinical information.

Where appropriate, it may be useful if the data definitions in this data set specification were also used to address data definition needs in non-clinical environments such as public health surveys etc. This could allow for qualitative comparisons between data collected in, and aggregated from, clinical settings (i.e. using application of the ACS data set specification), with that collected through other means (e.g. public health surveys, reports).

A set of ACS data elements and standardised definitions can inform the development and conduct of future registries at both the national and local level.

The working group formed under the National Heart Foundation of Australia (Heart Foundation) and the Cardiac Society of Australia and New Zealand (CSANZ) initiative was diverse and included representation from the following organisations: the Heart Foundation, the CSANZ, the Australasian College of Emergency Medicine, the Australian Institute of Health and Welfare, the Australasian Society of Cardiac & Thoracic Surgeons, Royal Australian College of Physicians (RACP), RACP - Towards a Safer Culture, National Centre for Classification in Health (Brisbane), the NSW Aboriginal Health & Medical Research Council, the George Institute for International Health, the School of Population Health at the University of Western Australia and the National Cardiovascular Monitoring System Advisory Committee.

To ensure the broad acceptance of the data set specification, the working group also sought consultation from the heads of cardiology departments, other specialist professional bodies and regional key opinion leaders in the field of acute coronary syndromes.

Collection and usage attributes

Guide for use:

There are six data clusters in the Acute Coronary Syndrome (Clinical) DSS. To ensure a complete description of the clinical management of acute coronary syndromes (ACS) it is recommended that all clusters be collected along with the individual data elements during the

current ACS event by the individual hospital or health service area.

The six data clusters in this DSS include:

1. Acute coronary syndrome clinical event cluster
2. Functional stress test cluster
3. Electrocardiogram cluster
4. Ventricular ejection fraction cluster
5. Acute coronary syndrome pharmacotherapy cluster
6. Coronary artery cluster

Collection methods:

This data set specification is primarily concerned with the clinical use of ACS-Data. Acute care environments such as hospital emergency departments, coronary care units or similar acute care areas are the settings in which implementation of the core ACS data set specification should be considered. A wider range of health and health related establishments that create, use or maintain, records on health care clients, could also use it.

Metadata items in this Data Set Specification

<i>Seq No.</i>	<i>Metadata item</i>	<i>Obligation</i>	<i>Max occurs</i>
-	Acute coronary syndrome clinical event cluster	Conditional	1

Functioning and Disability DSS

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	320319
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 16/10/2006
<i>DSS type:</i>	Data Set Specification (DSS)
<i>Scope:</i>	The Functioning and Disability DSS aims to ensure national consistency in relation to defining and measuring human functioning and disability. This DSS has been developed to be consistent with the International Classification of Functioning, Disability and Health (ICF).

Functioning and disability are dual concepts in a broad framework.

Functioning is the umbrella term for any or all of: body functions, body structures, activities and participation. Functioning is a multidimensional concept denoting the neutral aspects of the interaction between an individual (with a health condition) and that individual's environmental and personal factors.

Disability is the umbrella term for any or all of: an impairment of body structure or function, a limitation in activities, or a restriction in participation. Disability is a multi-dimensional and complex concept and is conceived as a dynamic interaction between health conditions and environmental and personal factors (WHO 2001:6).

A health condition may be a disease (acute or chronic), disorder, injury or trauma. Environmental factors make up the physical, social and attitudinal environment in which people live and conduct their lives. Personal factors relate to the individual, such as age, sex and Indigenous status.

The components of functioning and disability are classified and defined in the ICF as **body structures** and **body functions, activities and participation** and **environmental factors**. Each component is composed of various domains; these are sets of related physiological functions, anatomical structures, actions, tasks, areas of life, and external influences. Qualifiers, the numeric measures coded after the relevant domain, are usually essential to the meaningful use of the classification because of the neutral terms of the domains.

Many different 'definitions' of disability are used in Australia, both in administrative data collections and in Acts of Parliament. The consistent identification of disability in national data collections has been recommended in a number of reports, for instance to enable:

- the monitoring of access to generic services by people with disability;
- the collection of more consistent data on disability support and related services, including data on service use by different groups;
- population data and service data to be related, thereby improving the nation's analytical capacity in relation to the need for and supply of services; and

- improved understanding of the relationship between disability, health conditions and other health outcomes.

Defining disability makes it possible to determine the number of people in the population with disability, those who are accessing services, both disability specific and generic, and those with a disability in the general population with unmet need. Better definition of disability will aid better targeting of resources to those in need.

The concept 'Disability' can be operationalised in a wide variety of settings and for various purposes, using a combination of related metadata items as building blocks.

The metadata items selected for a particular application may vary depending on the approach to functioning and disability. For example, in hospital rehabilitation, the focus may be on the impairment and activity dimensions, and in community-based care the focus may be primarily on participation. Some applications may require a broad scope for inclusion (e.g. discrimination legislation). Data collections relating to services will select combinations of the data elements, which best reflect the eligibility criteria for the service.

The Functioning and Disability DSS comprises the following four clusters to describe level of human functioning:

1. Body functioning, qualified by extent of impairment
2. Body structure, qualified by extent, nature and location of impairment
3. Activities and participation, qualified by level of difficulty and need for assistance with undertaking activities and extent of and satisfaction with participation
4. Environmental factors, qualified by extent of influence of the environment

Data collected using this DSS can be related to national data collections which use ICF concepts such as the Commonwealth State Territory Disability Agreement (CSTDA) NMDS collection and the ABS Survey of Ageing, Disability and Carers and, from 2006, the Census.

Collection and usage attributes

Collection methods:

Each of the four clusters that make up the Functioning and Disability DSS should be recorded for a complete description of human functioning. This information can be gathered over time by a range of health and community care providers.

Completion of the DSS will record a person-centred description of the experience of functioning of the individual who is the subject of the data. The experience of functioning is in relation to a health condition, and does not consider decrements in functioning that may be associated with social factors such as ethnic background or economic status. For example, the level of communication is recorded in relation to the health condition, not to the fact that a person does not speak English at home.

The ICF provides a framework for the description of human functioning and disability. The components of ICF are defined in relation to a health condition. A health condition is an umbrella term

for 'disease (acute or chronic), disorder, injury or trauma' (WHO 2001). A health condition may be recorded, for example, as:

- Episode of care principal diagnosis, code (ICD-10-AM 5th Ed) ANN{.N[N]}
- Episode of care additional diagnosis, code (ICD-10-AM 5th Ed) ANN{.N[N]}.

This DSS may be used in data collections in the community services, housing and health sectors.

Comments:

The ICF was endorsed by the World Health Assembly in 2001 as a reference member of the WHO Family of International Classifications and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002). The ICF is grounded in a human rights philosophy, and its relationship to the UN Standard Rules on Equalization of Opportunities for Persons with Disabilities endorsed by the United Nations in 1994 is acknowledged. The purpose of the Rules is to ensure that people with disabilities, as members of their societies, may exercise the same rights and obligations as others.

Health care client identification DSS

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	374201
<i>Registration status:</i>	Health, Standard 03/12/2008
<i>DSS type:</i>	Data Set Specification (DSS)
<i>Scope:</i>	The data elements specified in this metadata set provide a framework for improving the positive identification of persons in health care organisations. This metadata set applies in respect of all potential or actual clients of the Australian health care system. It defines demographic and other identifying data elements suited to capture and use for person identification in health care settings.

The objectives in collecting the data elements in this metadata set are to promote uniformly good practice in:

- identifying individuals
- recording identifying data so as to ensure that each individual's health records will be associated with that individual and no other.

The process of positively identifying people within a health care service delivery context entails matching data supplied by those individuals against data the service provider holds about them. The positive and unique identification of health care clients is a critical event in health service delivery, with direct implications for the safety and quality of health care.

There are many barriers to successfully identifying individuals in health care settings, including variable data quality; differing data capture requirements and mechanisms; and varying data matching methods. These definitions provide a base for improving the confidence of health service providers and clients alike that the data being associated with any given individual, and upon which clinical decisions are made, is appropriately associated.

Collection and usage attributes

<i>Collection methods:</i>	<p>This metadata set is primarily concerned with the clinical use of Health care client identification data. It should be used by health and health-related establishments that create, use or maintain records on health care clients.</p> <p>Establishments should use this metadata set, where appropriate, for collecting data when registering health care clients or potential health care clients.</p> <p>The collection of data based on this metadata set is voluntary.</p> <p>National reporting arrangements</p> <p>Collectors of this metadata set should refer to relevant privacy legislation, codes of fair information practice and other guidelines so as not to breach personal privacy in their collection,</p>
----------------------------	--

use, storage and disclosure of health care client information. There is no comprehensive privacy legislation covering both the public and private sectors across Australia so users need to consider their particular set of circumstances (i.e. location and sector) and whether privacy legislation covers those circumstances.

A Commonwealth legislative scheme applies to the private sector. Users may refer to the Federal Privacy Commissioner's web site for assistance in complying with their privacy obligations. In the public sector, in instances where no legislation, code of fair information practice or other guidelines covers the particular circumstances, users should refer to AS 4400 Personal privacy protection in health care information systems.

Health care provider identification DSS

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	374199
<i>Registration status:</i>	Health, Standard 03/12/2008
<i>DSS type:</i>	Data Set Specification (DSS)
<i>Scope:</i>	<p>The scope of these data elements includes identification of individual and organisation health care providers. The data elements also allow for identification of an individual in a health care organisation. The definition of health care provider is: 'any person or organisation who is involved in or associated with the delivery of healthcare to a client, or caring for client wellbeing'.</p> <p>The data elements have been defined to enable a common, best practice approach to the way data are captured and stored, to ensure that records relating to a provider will be associated with that individual and/or organisation and no other. The definitions are proposed for clinical and administrative data management purposes.</p> <p>The ability to positively identify health care providers and locate their relevant details is an important support to the provision of speedy, safe, high quality, comprehensive and efficient health care. Unambiguous identification of individual health care providers is necessary for:</p> <ul style="list-style-type: none">• Requesting and reporting of orders, tests and results (e.g. pathology, diagnostic imaging)• Other communications and referrals between health care providers regarding ongoing care of patients (e.g. a referral from a GP to a specialist, a hospital discharge plan)• Reporting on health care provision to statutory authorities (e.g. reporting of hospital patient administration systems data to State/Territory government health agencies)• Payments to providers• Registration of providers• Directories or lists of providers and their service locations for consumer information.

Collection and usage attributes

<i>Collection methods:</i>	Collected at point of entry to health care for the purposes of the identification of the provider of that health care.
<i>Comments:</i>	There are many barriers to successfully identifying individuals in health care settings, including variable data quality; differing data capture requirements and mechanisms; and varying data matching methods. This data set specification provides a framework for improving the confidence that the data being associated with any given individual or organisation, is appropriately associated.

Source and reference attributes

<i>Submitting organisation:</i>	Standards Australia Inc Health Informatics Committee (IT-014)
<i>Reference documents:</i>	Health care client identification DSS The Australian Standard AS4846 Health Care Provider Identification identifies other data that should be collected. These data are collections of free text information and as such are not capable of standardisation as a national health data standard. Within AS4846 however they form part of the data collection necessary for the complete identification of a health care provider. These data elements are identified in the section Standardised elsewhere section below. If these data elements are collected in conjunction with those of the Data set specification they form a collection equivalent to that of the Australian Standard AS4846.

Palliative care performance indicators DSS

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	295806
<i>Registration status:</i>	Health, Standard 05/12/2007
<i>DSS type:</i>	Data Set Specification (DSS)
<i>Scope:</i>	<p>This data set specification specifies information for collection about all administrative health regions, and whether they have developed strategic plans which incorporate specified palliative care elements. It also specifies information for collection about all government-funded palliative care agencies (service provider organisations), their approach to some aspects of service delivery, and their efforts in specific areas of quality improvement.</p> <p>This information enables reporting of nationally-agreed palliative care performance indicators. Currently, there are four national performance indicators that have been agreed for reporting by the Palliative Care Intergovernmental Forum. These are:</p> <ol style="list-style-type: none">1. The proportion of administrative health regions that have a written plan for palliative care that incorporates palliative care elements,2. The proportion of palliative care agencies, within their setting of care, that routinely undertake or undergo formal assessment against the Palliative Care Australia standards,3. The proportion of palliative care agencies, within their setting of care, that actively collect feedback from clients and staff (within the workforce) relating to services and service delivery,4. The proportion of palliative care agencies, within their setting of care, that have formal working partnerships with other services provider(s) or organisation(s).

Collection and usage attributes

<i>Collection methods:</i>	The data for this DSS are obtained from two sources: a survey of administrative health regions and a survey of all government-funded palliative care agencies (service provider organisations) that provide care in community and/or admitted patient settings.

Note that a health professional may be qualified and registered in more than one profession.

The Registered health labour force DSS provides comprehensive data on Australia's registered health labour force. It assists governments, educators, health care providers and the community to understand the current health labour force and with workforce planning.

Collection methods:

National reporting arrangements

Registered health professionals provide data to the Australian Health Practitioner Regulation Agency as part of their initial registration and registration renewal processes. The data includes information required for registration purposes and additional workforce data.

The Australian Health Practitioner Regulation Agency provides an extract of these data to the Australian Institute of Health and Welfare (AIHW) for the purposes of national collation and reporting. The data in this DSS primarily comprises workforce data.

Periods for which data are collected and collated

Data are collated annually for each profession. The period is determined by the national registration renewal period for health professionals and may differ between health professions.

Registered medical professional labour force DSS

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	375422
<i>Registration status:</i>	Health, Standard 10/12/2009
<i>DSS type:</i>	Data Set Specification (DSS)
<i>Scope:</i>	<p>All medical professionals listed with the Australian Health Practitioner Regulation Agency during the reference period, including:</p> <ul style="list-style-type: none">• medical practitioners;• medical specialists; and• medical specialists-in-training. <p>Medical professionals included in this DSS may be currently registered or they may be listed but not currently registered.</p>

Collection and usage attributes

<i>Statistical unit:</i>	<p>The statistical unit for this data set is the Registered medical professional.</p> <p>A Registered medical professional refers to a person who is currently registered, or who has been registered, with the Australian Health Practitioner Regulation Agency as a medical practitioner, medical specialist or medical specialist-in-training at any time during the reference period.</p>
<i>Guide for use:</i>	<p>This DSS is a component of the Registered health labour force DSS. The Registered health labour force DSS contains profession-specific DSS for health professions listed with the Australian Health Practitioner Regulation Agency.</p> <p>Note that a health professional may be qualified and registered in more than one profession.</p> <p>Within each profession-specific DSS there are data clusters that apply to health professionals employed in the profession. Main job data clusters apply to all health professionals employed in the profession. Second job data clusters relate only to those health professionals employed in more than one job in the profession. All other workforce data elements in the DSS apply to all jobs held in the profession.</p>
<i>Collection methods:</i>	<p><i>National reporting arrangements</i></p> <p>Registered health professionals provide data to the Australian Health Practitioner Regulation Agency as part of their initial registration and registration renewal processes. The data includes information required for registration purposes and additional workforce data.</p> <p>The Australian Health Practitioner Regulation Agency provides an extract of these data to the Australian Institute of Health and Welfare (AIHW) for the purposes of national collation and reporting. The data in this DSS comprises</p>

demographic, registration and work characteristics information.

Periods for which data are collected and collated

Data are collated annually. The period is determined by the national registration renewal period for medical professionals.

Collection of workforce data

Health professionals are asked to report data for their main job, second job, and all jobs in the profession. Some health professionals may hold more than two jobs in the profession therefore data reported for main and second jobs may be less than data reported for all jobs in the profession.

Registered psychology labour force DSS

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	384170
<i>Registration status:</i>	Health, Standard 10/12/2009
<i>DSS type:</i>	Data Set Specification (DSS)
<i>Scope:</i>	All psychologists listed with the Australian Health Practitioner Regulation Agency during the reference period. Psychologists included in this DSS may be currently registered or they may be listed but not currently registered.

Collection and usage attributes

<i>Statistical unit:</i>	<p>The statistical unit for this data set is the Registered psychologist.</p> <p>A Registered psychologist refers to a person who is currently registered, or who has been registered, with the Australian Health Practitioner Regulation Agency as a psychologist at any time during the reference period.</p>
<i>Guide for use:</i>	<p>This DSS is a component of the Registered health labour force DSS. The Registered health labour force DSS contains profession-specific DSS for health professions listed with the Australian Health Practitioner Regulation Agency.</p> <p>Note that a health professional may be qualified and registered in more than one profession.</p> <p>Within each profession-specific DSS there are data clusters that apply to health professionals employed in the profession. Main job data clusters apply to all health professionals employed in the profession. Second job data clusters relate only to those health professionals employed in more than one job in the profession. All other workforce data elements in the DSS apply to all jobs held in the profession.</p>
<i>Collection methods:</i>	<p><i>National reporting arrangements</i></p> <p>Registered health professionals provide data to the Australian Health Practitioner Regulation Agency as part of their initial registration and registration renewal processes. The data includes information required for registration purposes and additional workforce data.</p> <p>The Australian Health Practitioner Regulation Agency provides an extract of these data to the Australian Institute of Health and Welfare (AIHW) for the purposes of national collation and reporting. The data in this DSS comprises demographic, registration and work characteristics information.</p> <p><i>Periods for which data are collected and collated</i></p> <p>Data are collated annually. The period is determined by the national registration renewal period for psychologists.</p>

Collection of workforce data

Health professionals are asked to report data for their main job, second job, and all jobs in the profession. Some health professionals may hold more than two jobs in the profession therefore data reported for main and second jobs may be less than data reported for all jobs in the profession.

Data element clusters

Activities and Participation cluster

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	320111
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 16/10/2006
<i>DSS type:</i>	Data Element Cluster
<i>Scope:</i>	This data cluster is one of four clusters that make up the Functioning and Disability DSS. To ensure a <u>complete</u> description of human functioning it is recommended that this cluster be collected along with the following three clusters over time and by a range of health and community care providers:

1. Body functions cluster
2. Body structures cluster
3. Environmental factors cluster

In the context of health, activity refers to the execution of a task or action by an individual, and participation refers to involvement in a life situation.

The Activities and Participation cluster collects information on a person's level of difficulty with activities, assistance needed to perform activities, extent of participation, and satisfaction with participation in the following life areas:

1. Learning and applying knowledge
2. General tasks and demands
3. Communication
4. Mobility
5. Self-care
6. Domestic life
7. Interpersonal interactions and relationships
8. Major life areas
9. Community, social and civic life

The use of this cluster to collect information on activity limitations and participation restrictions should enhance data quality for medical purposes as well as for a range of purposes related to understanding human functioning. This data cluster should be complementary to information on diseases.

The information collected in the Activities and Participation cluster may also indicate the sorts of interventions that could result in improved functioning. This could be in the form of rehabilitation, health-related interventions, equipment, or support for example.

Collection and usage attributes

Guide for use:

The following four measures are used to describe activities and participation in life areas:

1. **Difficulty** with activities may include pain involved, time taken, effort, number of errors, clumsiness, and modification of the manner in which the activity is performed. Difficulty is the combination of the frequency with which the problem exists, the duration of the problem and the intensity of the problem.
2. **Need for assistance** with activities includes personal assistance and/or supervision.
3. **Extent of participation** indicates the level of participation restriction. This corresponds to an externally observable measure of participation.
4. **Satisfaction with participation** corresponds to the person's own perspective on their participation, and reflects their attitude to their participation in the various life areas. It is essentially a summary measure in which are embedded the concepts of choice, opportunity and importance.

For each life area code recorded there can be one response for each of the measures. The choice of measure will depend on the user and their information requirements.

There are numerous possible methods for collecting activity, activity limitation, participation and participation restriction. A decision could be made to collect information:

- about every domain;
- on domains of particular relevance; or
- on a number of domains which are prioritised according to specified criteria.

See also the *ICF Australian User Guide* for further guidelines.

Collection methods:

The Person—activities/participation life area, code (ICF 2001) AN[NNN] data element is supported by a value domain - Activities and participation code (ICF 2001) AN[NNN] - representing a single list of activity and participation domains that are grouped together.

The World Health Organization suggests the list be used in one of four operational ways.

- a) To designate some domains as activities and others as participation, not allowing any overlap.
- b) Same as (a) above, but allowing partial overlap.
- c) To designate all detailed domains as activities and the broad category headings as participation.
- d) To use all domains as both activities and participation.

The ICF Australian User Guide proposes the use of either option (b) or (d) with the use of additional qualifiers to

delineate between activity and participation.

The Person—activities and participation life area, code (ICF 2001) AN[NNN] data element can be used on its own as a neutral list of tasks, actions and life situations, or together with the four additional data elements in this cluster to record positive or neutral performance as well as activity limitations and participation restrictions. (It is important to note that the Person—activities and participation life area, code (ICF 2001) AN[NNN] data element must always be used when recording any of the other four data elements.)

Comments:

This cluster is based on the International Classification of Functioning, Disability and Health (ICF). The ICF is a reference member of the WHO Family of International Classifications (endorsed by the World Health Assembly in 2001) and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002).

The ICF provides a framework for the description of human functioning and disability. The components of ICF are defined in relation to a health condition. A health condition is an 'umbrella term for disease (acute or chronic), disorder, injury or trauma' (WHO 2001). A health condition may be recorded, for example, as:

- Episode of care principal diagnosis, code (ICD-10-AM 5th Ed) ANN{.N[N]}
- Episode of care additional diagnosis, code (ICD-10-AM 5th Ed) ANN{.N[N]}.

The ICF recognises two constructs that can be used with 'Activities and Participation': performance and capacity. 'Performance' is what the person does in their usual environment. 'Capacity' describes 'an individual's ability to execute a task or an action in a standardised environment, where a standardised environment may be:

- an actual environment commonly used for assessment in test settings; or
- in cases where this is not possible, an assumed environment which can be thought to have a uniform impact' (WHO 2001).

The standardised environment has not been generally operationalised. However, the recognition of these two constructs in the ICF underscores the importance of recording the environment in which activities are being performed.

Body functions cluster

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	320117
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 16/10/2006
<i>DSS type:</i>	Data Element Cluster
<i>Scope:</i>	This data cluster is one of four clusters that make up the Functioning and Disability DSS. To ensure a complete description of human functioning it is recommended that it be collected along with the following three clusters over time and by a range of health and community care providers:

1. Body Structures cluster
2. Activities and Participation cluster
3. Environmental factors cluster

Body functions are the physiological functions of body systems (including psychological functions). The term 'body' refers to the human organism as a whole; hence it includes the brain and its functions, that is, the mind.

The Body functions cluster collects information on the presence and extent of impairment of the eight body function domains listed below:

1. Mental functions
2. Sensory functions and pain
3. Voice and speech functions
4. Functions of the cardiovascular, haematological, immunological and respiratory systems
5. Functions of the digestive, metabolic and the endocrine system
6. Genitourinary and reproductive functions
7. Neuromusculoskeletal and movement-related functions
8. Functions of the skin and related structures

Impairments of body functions, as defined in the ICF, are problems in body functions such as a loss or significant departure from population standards or averages. The ICD uses impairment as 'signs and symptoms', a 'component of disease' or sometimes 'reason for contact with health services'.

Impairments are recorded in terms of their extent or magnitude, nature and/or location. Determination of impairment is undertaken primarily by those qualified to evaluate physical and mental functioning or structure according to these standards.

Impairments should be detectable or noticeable by others or

the person by direct observation or by inference from indirect observation. Impairments are not the same as the underlying pathology, but are manifestations of that pathology.

Impairments can be temporary or permanent; progressive, regressive or static; intermittent or continuous. The deviation from the population norm may be slight or severe and may fluctuate over time. Impairments may result in other impairments.

Impairments may be part, or an expression of a health condition, but do not necessarily indicate that a disease is present or that the individual should be regarded as sick.

The use of this cluster to collect information on impairments of body functions should enhance data quality for medical purposes as well as for a range of purposes related to human functioning. This data cluster should be complementary to information on diseases.

The information collected in the Body functions cluster may also indicate the sorts of interventions that could result in improved functioning. This could be in the form of rehabilitation, health-related interventions, equipment, or support for example.

Collection and usage attributes

Collection methods:

The Person—body function, code (ICF 2001) AN[NNNN] data element is a neutral list of functions that can be used to record positive or neutral body function, as well as impairment of a specified body function when used in conjunction with Person—extent of impairment of body function, code (ICF 2001)N. For each body function code recorded there should be a code for impairment of body functions.

There are numerous possible methods for collecting body functions and impairments. A decision could be made to collect information:

- about every domain;
- on domains of particular relevance; or
- on a number of domains which are prioritised according to specified criteria.

See also the *ICF Australian User Guide* for further guidelines.

Comments:

This cluster is based on the International Classification of Functioning, Disability and Health (ICF). The ICF was endorsed by the World Health Assembly in 2001 as a reference member of the WHO Family of International Classifications and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002).

The ICF provides a framework for the description of human functioning and disability. The components of ICF are defined in relation to a health condition. A health condition is an 'umbrella term for disease (acute or chronic), disorder,

injury or trauma' (WHO 2001). A health condition may be recorded, for example, as:

- Episode of care principal diagnosis, code (ICD-10-AM 5th Ed) ANN{.N[N]}
- Episode of care additional diagnosis, code (ICD-10-AM 5th Ed) ANN{.N[N]}.

Body structures cluster

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	320151
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 16/10/2006
<i>DSS type:</i>	Data Element Cluster
<i>Scope:</i>	This data cluster is one of four clusters that make up the Functioning and Disability DSS. To ensure a complete description of human functioning it is recommended that this cluster be collected along with the following three clusters over time and by a range of health and community care providers:

1. Body functions cluster
2. Activities and participation cluster
3. Environmental factors cluster

Body structures are anatomical parts of the body such as organs, limbs and their components.

The Body structures cluster collects information on the presence and extent of impairment, the nature of the change and the location of the impairment for the eight body structure domains listed below:

1. Structures of the nervous system
2. The eye, ear and related structures
3. Structures involved in voice and speech
4. Structures of the cardiovascular, immunological and respiratory systems
5. Structures related to the digestive, metabolism and endocrine systems
6. Structures related to genitourinary and reproductive systems
7. Structures related to movement
8. Skin and related structures

Impairments of body structures, as defined in the ICF, are problems in body structure such as a loss or significant departure from population standards or averages. The ICD uses impairment as 'signs and symptoms', a 'component of disease' or sometimes 'reason for contact with health services'.

Impairments are recorded in terms of their extent or magnitude, nature and/or location. Determination of impairment is undertaken primarily by those qualified to evaluate physical and mental functioning or structure according to population standards or averages.

Impairments should be detectable or noticeable by others or

the person by direct observation or by inference from indirect observation. Impairments are not the same as the underlying pathology, but are manifestations of that pathology.

Environmental factors cluster

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	320195
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 16/10/2006
<i>DSS type:</i>	Data Element Cluster
<i>Scope:</i>	This data cluster is one of four clusters that make up the Functioning and Disability DSS. To ensure a complete description of human functioning it is recommended that this cluster be collected along with the following three clusters over time and by a range of health and community care providers:

1. Body functions cluster
2. Body structures cluster
3. Activities and participation cluster

Environmental factors make up the physical, social and attitudinal environment in which people live and conduct their lives. These factors can have a positive or negative influence on a person's participation as a member of society, on performance of activities, or on a person's body function or structure.

The Environmental Factors cluster collects information on the extent to which each of the domains in the five chapters listed below influence the body function or structure, activity or participation of a person:

1. Products and technology
2. Natural environment and human-made changes to environment
3. Support and relationships
4. Attitudes
5. Services, systems and policies

Each chapter contains categories at different levels ordered from general to detailed. For detailed information the user should follow the structure of the ICF; the codes should be drawn from the same hierarchical level within any particular chapter.

Codes at the ICF chapter headings may be recorded. If further detail is required the Environmental Factors classification includes 3 and 4 digit codes:

e5 Services, systems and policies
e580 Health services, systems and policies
e5800 Health services

Where multiple environmental factors and the extent of influence are recorded, the following prioritising system may be useful:

- The first recorded environmental factor is the one having the greatest impact on the individual.
- Second and subsequent environmental factors are also of relevance to the individual.

The Environmental factors cluster may be used in health, community services and other disability-related data collections to record the environmental factors that facilitate or inhibit optimum functioning at the body, person or societal level. Identifying whether, and by how much, these environmental factors are influencing an individual's level of functioning, and whether the influence is a facilitator or barrier, may indicate the sorts of interventions that will optimise the individual's functioning. This information may be useful for policy development, service provision, or advocacy purposes. Preventative strategies could also be indicated by this information.

Collection and usage attributes

Guide for use:

For each environmental factor code recorded there should be one response for the influence of the environmental factor.

There are numerous possible methods for collecting environmental factors. Information can be collected on:

- all environmental factors;
- environmental factors of particular relevance;
- a number of environmental factors, prioritised according to specified criteria;
- one environmental factor per person; or
- record environmental factors for each recorded body function, body structure, and activities and participation.

See also the *ICF Australian User Guide* for further guidelines.

Comments:

This cluster is based on the International Classification of Functioning, Disability and Health (ICF). The ICF was endorsed by the World Health Assembly in 2001 as a reference member of the WHO Family of International Classifications and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002).

The ICF provides a framework for the description of human functioning and disability. The components of ICF are defined in relation to a health condition. A health condition is an 'umbrella term for disease (acute or chronic), disorder, injury or trauma' (WHO 2001). A health condition may be recorded, for example, as:

Labour force status cluster

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	383452
<i>Registration status:</i>	Health, Standard 10/12/2009
<i>DSS type:</i>	Data Element Cluster
<i>Scope:</i>	All health professionals renewing their registration with the Australian Health Practitioner Regulation Agency.

Collection and usage attributes

Statistical unit: The statistical unit is the Registered health professional.

Guide for use: The data elements in this cluster, when used together, describe the labour force status of registered health professionals. The cluster assists to describe the size and availability of the health labour force.

The data can be output as sub-groups of the labour force using the following categories:

1. Employed
 1. Employed in Australia in registered profession
 1. Employed in the profession
 2. On extended leave
 2. Employed in Australia outside of registered profession
 1. Looking for work in registered profession
 2. Not looking for work in registered profession
 3. Employed overseas in registered profession
 1. Looking for work in Australia in registered profession
 2. Not looking for work in Australia in registered profession
2. Not employed in Australia
 1. Looking for work in Australia in registered profession
 2. Not looking for work in Australia in registered profession
3. Retired from registered profession in Australia

The employed category excludes those only engaged in unpaid and/or voluntary activities.

Not employed in Australia includes those who are not employed at all and those who are only employed outside Australia.

Collection methods:

Data elements in this cluster comprise five key labour force concepts for the registered profession:

- Country of employment
- Extended leave status
- Jobseeker status
- Labour force status
- Retirement status

It is not necessary to collect these concepts as separate questions. Instead, they are best combined to form the response categories to a set of survey questions.

The following questions are an example of how the separate data elements from this cluster should be used together. They identify the labour force status of a health professional in the registered profession in the last week.

1. Last week, were you:

- Working in the registered profession in Australia? (continue with questionnaire)
- Employed in the registered profession but within a period of leave for 3 months or more? (thank you, nothing further)
- Working in the registered profession overseas? (go to question 2)
- Working, but not in the profession? (go to question 2)
- Not working in paid employment at all? (go to question 2)

2. Last week, did you take active steps to look for work in the registered profession in Australia?

Active steps include: applying for work in the profession, enquiring about a job, answering an advertisement, registering with an employment agency, advertising for work or contacting people in the profession about a job.

- No, I am retired from regular work
- No, not at all
- Yes, I looked for work (either full-time or part-time)

Thank you - no further questions

Ventricular ejection fraction cluster

Identifying and definitional attributes

<i>Metadata item type:</i>	Data Set Specification
<i>METeOR identifier:</i>	351881
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>DSS type:</i>	Data Element Cluster
<i>Scope:</i>	The ventricular ejection fraction is the fraction of blood pumped out of a ventricle with each heart beat. Impaired ventricular ejection fraction can be indicative of damage to the heart muscle, such as that sustained during myocardial infarction. The ventricular ejection fraction cluster collects information on the timing, measurement type and results of a ventricular ejection fraction measurement during the current hospital presentation.

Admitted patient

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268957
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	<p>A patient who undergoes a hospital's admission process to receive treatment and/or care. This treatment and/or care is provided over a period of time and can occur in hospital and/or in the person's home (for hospital-in-the-home patients). The patient may be admitted if one or more of the following apply:</p> <ul style="list-style-type: none">• the patient's condition requires clinical management and/or facilities not available in their usual residential environment• the patient requires observation in order to be assessed or diagnosed• the patient requires at least daily assessment of their medication needs• the patient requires a procedure(s) that cannot be performed in a stand-alone facility, such as a doctor's room without specialised support facilities and/or expertise available (e.g. cardiac catheterisation)• there is a legal requirement for admission (e.g. under child protection legislation)• the patient is aged nine days or less.
<i>Specialisation of:</i>	Hospital patient (Admission status)

Collection and usage attributes

<i>Guide for use:</i>	<p>This metadata item should be used in conjunction with the definition of same-day patient in the glossary item same-day patient.</p> <p>Part 2 of Schedule 3 of the National Health Act (type C) professional attention may be used as a guide for the medical services not normally requiring hospital treatment and therefore not generally related to admitted patients.</p> <p>All babies born in hospital are admitted patients.</p>
<i>Comments:</i>	<p>This definition includes all babies who are nine days old or less. However, all newborn days of stay are further divided into categories of qualified and unqualified for Australian Healthcare Agreements and health insurance benefit purposes. A newborn day is acute (qualified) when a newborn meets at least one of the following criteria:</p> <ul style="list-style-type: none">• is the second or subsequent live born infant of a multiple birth, whose mother is currently an admitted patient;• is admitted to an intensive care facility in a hospital, being a facility approved by the Commonwealth Health Minister for the purpose of the provision of special care;• remains in hospital without its mother;

- is admitted to the hospital without its mother.

Acute (qualified) newborn days are eligible for health insurance benefit purposes and should be counted under the Australian Health Care Agreements. Days when the newborn does not meet these criteria are classified as unqualified (if they are nine days old or less) and should be recorded as such. Unqualified newborn days should not be counted under the Australian Health Care Agreements and are not eligible for health insurance benefit purposes.

Available bed

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	373634
<i>Registration status:</i>	Health, Standard 03/12/2008
<i>Definition:</i>	A suitably located and equipped bed chair, trolley or cot where the necessary financial and human resources are provided for admitted patient care.
<i>Specialisation of:</i>	Establishment (Available bed)

Collection and usage attributes

Comments: This item supports a number of metadata items developed during 2007-08 to replace Establishment – number of available beds for admitted patients, average. The new definitions improve on the counting rules, the definition of availability and provide for the separate reporting of overnight-stay beds, same-day beds, hospital-in-the-home beds and neonatal cots (non-special-care).

During the development phase, it became clear that there are a multitude of bed descriptors, other than 'available', in use. In order to provide clarity in relation to 'available beds' other known terms are defined below:

- Active beds – alternative term for 'available beds'.
- Approved beds – the maximum number of beds that the hospital is authorised to have. This may exceed the number of physical beds.
- Base beds - alternative term for 'available beds'.
- Bed alternatives (QLD) – this term is used to describe furniture, other than beds in overnight wards, such as trolleys, chairs and cots, which provide accommodation for admitted patients – e.g. chairs/trolleys accommodating chemotherapy and dialysis patients.
- Bed Equivalentents (NSW) – a method of equating same day beds to overnight beds – not necessary if counting overnight and same day beds separately.
- Capacity – term which can be used in conjunction with either available or physical beds, but more often the latter – to indicate the maximum number of beds that could be made available, given the appropriate level of funds and nursing and auxiliary staff.
- Designated beds – term used to describe beds set aside for specialist care, e.g. mental health.
- Flex beds – see 'surge/flex beds' below.
- Funded beds – may equate to 'available beds' unless the necessary human resources cannot be provided (e.g. due to a strike or nursing shortage).

- Licensed beds – this is an alternative term for ‘approved beds’, more commonly used for private hospitals where the maximum number of beds is often specified as part of the registration process.
- Medi-hotel bed – this term is used for beds in a non-ward residential service maintained and/or paid for by the hospital, as a substitute for traditional hospital ward accommodation. Residents may be accommodated in a medi-hotel overnight and be admitted as same-day patients or receive non-admitted patient services during the day. They may be accommodated in the medi-hotel before, during or after a multi-day admitted episode. Unlike hospital-in-the-home, however, no clinical services are provided in the medi-hotel and a significant decline in medical condition would always necessitate return from the medi-hotel to the hospital’s Emergency Department or other ward. Thus residents are not reported as admitted while in the medi-hotel (unless they are on leave) and the medi-hotel beds are not counted as available for admitted patients.
- Occupied/Unoccupied beds – categorisation of available beds – a bed is occupied if there is a patient physically in the bed or the bed is being retained for a patient (e.g. the patient is receiving treatment or is on leave). Beds may be available but not occupied, e.g. an 8 bed ward may be fully staffed, but only 7 beds are occupied. Also if a patient has left a bed to receive a different care type and will not be returning within 24 hours, the bed is not occupied.
- Occupancy Rate – calculated by dividing total bed days in a period by the product of the available beds and the days in the period – e.g. if in a non-leap year patients accumulated 33,000 bed days in a hospital with 100 overnight-stay beds, the occupancy rate = $33,000 / (365 * 100) = 90.4\%$. N.B. Occupancy rates calculated for same-day beds could exceed 100%.
- Open beds - alternative term for ‘available beds’.
- Operational beds - alternative term for ‘available beds’.
- Physical beds – the maximum number of beds that could be made available, given the appropriate level of funds and nursing and auxiliary staff.
- Seasonal beds – describes the movement in the number of available beds due to seasonal factors.
- Staffed beds – may equate to ‘available beds’ or may be lower depending on demand.
- Surge/flex beds (NSW) or Flex beds (SA) – the increase in the number of available beds that could be made by making arrangements for additional nursing and auxiliary staff. In other words, the number of surge/flex beds is the difference between the number of physical beds and the number of available beds.
- Swing beds – beds that can alternate between different types of care. Depending on the context, swing beds can be thought of as a sub-category of physical beds or available beds.

- Virtual bed – this term is used to denote a nominal location which the patient is held against in the hospital’s patient administration system. This is because in the patient administration system each admitted patient needs to be held against a bed whether or not they are in a physical bed. For example, if a neonate is sharing a bed with the mother (e.g. in a birth centre) a cot may not be set up. Hospital-in-the-home (HITH) patients may also be held in a virtual bed.

Client

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>Synonymous names:</i>	Client
<i>METeOR identifier:</i>	268969
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 01/03/2005
<i>Definition:</i>	A person, group or organisation eligible to receive services either directly or indirectly from an agency.
<i>Context:</i>	<p>Agencies may provide assistance to individual persons, groups of persons (e.g. support groups) or to other organisations. All of these may be considered clients of an agency. Specific data collections may circumscribe the Type of clients that are included in the collection. For example, at the current stage of development of the Home and Community Care (HACC) Minimum Data Set (MDS), HACC funded agencies are only required to report on clients who are individual persons. Future developments may extend the coverage of the HACC MDS collection to include organisational or group clients.</p> <p>The definition of a 'client' may also be circumscribed by the definition of 'assistance'. What is included as 'assistance' may depend on what activities are considered significant enough to warrant separate recording and reporting of the nature and/or amount of the assistance provided to a person. For example, an agency worker answering a telephone call from an anonymous member of the public seeking some basic information (e.g. a phone number for someone) would not usually consider that this interaction constituted assistance of sufficient significance to warrant recording that person as a 'client'.</p> <p>Furthermore, what constitutes 'assistance' may be influenced by the type of assistance the agency was established to provide. In the above example, the agency in question was funded specifically to provide telephone advice, and referral information, to members of the public or specific sub-groups of the public. The agency may have a policy that all persons telephoning the agency for information are classified as clients, albeit anonymous clients.</p> <p>The level of support or the amount of support given to a person by an agency can also be used to define them as a client or not. For example in the Supported Accommodation Assistance Program (SAAP) National data collection, clients are defined by either taking up an amount of time of an agency; being accommodated by an agency; or by entering an ongoing support relationship with an agency.</p>

Contracted hospital care

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268981
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Contracted hospital care is provided to a patient under an agreement between a purchaser of hospital care (contracting hospital or external purchaser) and a provider of an admitted or non-admitted service (contracted hospital).
<i>Specialisation of:</i>	Service/care event (Contracted hospital care status)

Collection and usage attributes

Guide for use: Related contracted hospital care metadata items should only be completed where services are provided which represent some, but not all of the contracted hospital's total services. It is not necessary to complete contracted hospital care items where all of the hospital services are contracted by a health authority, e.g. privately owned and/or operated public hospitals.

Contracted hospital care must involve all of the following:

- a purchaser, which can be a public or private hospital, or a health authority (department or region) or another external purchaser
- a contracted hospital, which can be a public or private hospital or day procedure centre
- the purchaser paying the contracted hospital for the contracted service; thus, services provided to a patient in a separate facility during their episode of care, where the patient is directly responsible for payment of this additional service, are not considered contracted services for reporting purposes
- the patient being physically present in the contracted hospital for the provision of the contracted service.

Thus, pathology or other investigations performed at another location on specimens gathered at the contracting hospital would not be considered contracted services for reporting purposes.

Allocation of diagnosis and procedure codes should not be affected by the contract status of an episode: the Australian Coding Standards should be applied when coding all episodes. In particular, procedures which would not otherwise be coded should not be coded solely because they were performed at another hospital under contract.

Procedures performed by a health care service (i.e. not a recognised hospital) should be coded if appropriate but are not considered to be contracted hospital procedures.

Any Diagnosis Related Group (DRG) derived for episodes involving contracted hospital care, should reflect the total treatment provided (all patient days and procedures), even

where part of the treatment was provided under contract by another hospital.

Episode of treatment for alcohol and other drugs

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268961
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The period of contact, with defined dates of commencement and cessation, between a client and a treatment provider or team of providers in which there is no change in the main treatment type or the principal drug of concern, and there has not been a non-planned absence of contact for greater than three months.
<i>Context:</i>	Alcohol and drug treatment services. This concept is required to provide the basis for a standard approach to recording and monitoring patterns of service utilisation by clients.
<i>Specialisation of:</i>	Episode of care (Episode of treatment for alcohol and other drugs status)

Collection and usage attributes

<i>Guide for use:</i>	<p>A treatment episode must have a defined date of commencement of treatment episode for alcohol and other drugs and a date of cessation of treatment episode for alcohol and other drugs.</p> <p>A treatment episode can have only one main treatment type for alcohol and other drugs and only one principal drug of concern. If the main treatment or principal drug changes then the treatment episode is closed and a new treatment episode is opened.</p> <p>A treatment episode may also be considered closed (ceased) if there is a change in the treatment delivery setting or the service delivery outlet. Where the change reflects a substantial alteration in the nature of the treatment episode, for instance where an agency operates in more than one treatment setting (or outlet) they may consider that a change from one setting (or outlet), to another necessitates closure of one episode and commencement of a new one.</p>
<i>Collection methods:</i>	Is taken as the period starting from the date of commencement of treatment and ending at the date of cessation of treatment episode.

Hospital

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268971
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A health care facility established under Commonwealth, state or territory legislation as a hospital or a free-standing day procedure unit, and authorised to provide treatment and/or care to patients.
<i>Context:</i>	Admitted patient care, admitted patient palliative care, admitted patient mental health care and public hospital establishments.
<i>Specialisation of:</i>	Establishment (Hospital status)

Collection and usage attributes

<i>Comments:</i>	<p>A hospital thus defined may be located at one physical site or may be a multicampus hospital. A multicampus hospital treats movements of patients between sites as ward transfers.</p> <p>For the purposes of these definitions, the term hospital includes satellite units managed and staffed by the hospital.</p> <p>This definition includes, but is not limited to, hospitals as recognised under Australian Health Care Agreements.</p> <p>Residential aged care services as approved under the National Health Act 1953 (Cwlth.) or equivalent state legislation are excluded from this definition.</p> <p>This definition includes entities with multipurpose facilities (e.g. those which contain both recognised and non-recognised components).</p>

Household

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268977
<i>Registration status:</i>	Health, Standard 04/05/2005 Community services, Superseded 27/04/2007 Housing assistance, Standard 01/03/2005
<i>Definition:</i>	A group of two or more related or unrelated people who usually reside in the same dwelling, and who make common provision for food or other essentials for living. Or a single person living in a dwelling who makes provision for his or her own food and other essentials for living, without combining with any other person.
<i>Context:</i>	Together with family, household is considered one of the basic groups of social aggregation. Information on household numbers and composition aids in identifying groups within the population such as Indigenous households or the number of people living alone.
<i>Specialisation of:</i>	Group of persons (Household status)

Collection and usage attributes

<i>Guide for use:</i>	For housing data collections, the number of tenancy agreements is a practical proxy for calculating the number of households receiving housing assistance. The persons in the group may pool their incomes and have a common budget to a greater or lesser extent: they may be related or unrelated persons, or a combination of both. Only usual residents of the household are included as members of the household. Visitors to a household are, by definition, excluded from the household.

Mental health service contact

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	286670
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	The provision of a clinically significant service by a specialised mental health service provider(s) for patients/clients, other than those patients/clients admitted to psychiatric hospitals or designated psychiatric units in acute care hospitals, and those resident in 24 hour staffed specialised residential mental health services, where the nature of the service would normally warrant a dated entry in the clinical record of the patient/client in question.
<i>Specialisation of:</i>	Service/care event (Service contact status)

Collection and usage attributes

<i>Guide for use:</i>	<p>A service contact must involve at least two persons, one of whom must be a specialised mental health service provider.</p> <p>Mobile and outreach services and consultation and liaison services are included as service contacts.</p> <p>Service contacts are not restricted to in person communication but can include telephone, video link or other forms of direct communication.</p> <p>Service contacts can either be with a patient/client, or with a third party such as a carer or family member, other professional or mental health worker or other service provider. Services involving only a service provider and a third party(ies) are included as service contacts, where the nature of the service would normally warrant a dated entry in the clinical record of the patient/client in question.</p> <p>There may be multiple service contacts on any one day for a patient/client or a third party(ies) and each service contact should be recorded separately.</p> <p>A service contact should be recorded for each patient/client for which the service is provided, whether by phone or other electronic means or in person, regardless of the number of patients/clients or third parties participating or the number of service providers providing the service. Service provision is only regarded as a service contact if it is relevant to the clinical condition of the patient/client. This means that it does not include services of an administrative nature (e.g. telephone contact to schedule an appointment) except where the nature of the service would normally warrant a dated entry in the clinical record of the patient/client in question.</p> <p>There may however be instances where notes are made in the patient/client clinical record that have not been prompted by a service provision for a patient/client (e.g. noting receipt of test results that require no further action). These instances would not be regarded as service contacts.</p> <p>In instances where documenting the patient/client's service contact details is separated in time from the service provision, this is not counted as a separate service contact.</p>
-----------------------	--

Travel to or from the location at which the service is provided, for example to or from outreach facilities or private homes, is not to be reported as a service contact.

Non-admitted patient emergency department service episode

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268976
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The treatment or care between when a patient presents at an emergency department and when the non-admitted patient emergency department treatment or care ends.
<i>Context:</i>	Emergency department care.
<i>Specialisation of:</i>	Episode of care (Non-admitted patient emergency department service episode status)

Collection and usage attributes

<i>Guide for use:</i>	<p>Includes patients who do not wait for treatment once registered or triaged, and those who are dead on arrival at the emergency department.</p> <p>Both a non-admitted patient emergency department service episode and an admitted patient episode of care should be recorded for patients who subsequently undergo a formal admission. The end of the non-admitted patient emergency department service episode should indicate the commencement of the admitted episode of care, if applicable.</p> <p>A non-admitted patient emergency department service episode ends when either the patient is admitted or, if the patient is not to be admitted, when the patient is recorded as ready to leave the emergency department or when they are recorded as having left at their own risk.</p>
<i>Comments:</i>	This metadata item has been defined to support the national minimum data set for Non-admitted patient emergency department care.

Non-admitted patient service event

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268972
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An interaction between one or more health care professionals with one or more non-admitted patients, for assessment, consultation and/or treatment intended to be unbroken in time. A service event means that a dated entry is made in the patient/client's medical record.
<i>Context:</i>	Hospital non-admitted patient care: This definition applies to non-admitted hospital patients and is not intended to apply to community based services.
<i>Specialisation of:</i>	Service/care event (Non-admitted patient service event status)

Collection and usage attributes

<i>Guide for use:</i>	<p>The period of interaction can be broken but still regarded as one service event if it was intended to be unbroken in time. This covers those circumstances in which treatment during a service event is temporarily interrupted for unexpected reasons, for example, a clinician is called to assess another patient who requires more urgent care.</p> <p>Service events can occur in an outpatient, emergency, radiology, pathology and/or pharmacy department or, by a hospital-based outreach service, in a location that is not part of the hospital campus.</p> <p>Service events may or may not be pre-arranged (except for telephone calls).</p> <p>Imaging, pathology and/or pharmacy services that are associated with a service event in an outpatient clinic, emergency department or outreach service are not regarded as service events themselves.</p> <p>Imaging, pathology or pharmacy services provided independent of a service event in an outpatient clinic, emergency department or outreach service are regarded as individual service events.</p> <p>Service events delivered via a telephone call are included if</p> <ul style="list-style-type: none">• they are a substitute for a face-to-face service event, and• they are pre-arranged, and• a record of the service event is included in the patient's medical record. <p>Service events include when the patient is participating via a video link (telemedicine). A service event can be counted at each site participating via the video link.</p> <p>If a carer/relative accompanies a patient during a service event, this is not considered to be a service event for the carer/relative, provided that the carer/relative is not a patient in their own right for the service contact.</p>
-----------------------	---

Where both are patients, it is considered that service events have been provided for the person(s) in whose medical record the service event is noted.

A service event is regarded as having occurred when a consultation occurs between their carer/relative and a service provider at an appointment when the patient is not present, provided that the carer/relative is not a patient in their own right for the service contact. Where both are patients, it is considered that service events have been provided for the person(s) in whose medical record the service event is noted.

A service event is regarded as having occurred for each patient who attends a group session such as an antenatal class. Outpatient department services provided to admitted patients are not regarded as service events.

Work-related services provided in clinics for staff are not service events.

Occupied bed

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	375696
<i>Registration status:</i>	Health, Standard 24/03/2009
<i>Definition:</i>	An occupied bed is an available bed where there is a patient physically in the bed or the bed is being retained for a patient (e.g. the patient is receiving treatment or is on leave).

Collection and usage attributes

<i>Comments:</i>	<p>Beds may be available but not occupied, e.g. an 8 bed ward may be fully staffed, but only 7 beds are occupied. Also if a patient has left a bed to receive a different care type and will not be returning within 24 hours, the bed is not occupied.</p> <p>The Occupancy Rate is calculated by dividing total bed days in a period by the product of the available beds and the days in the period – e.g. if in a non-leap year patients accumulated 33,000 bed days in a hospital with 100 overnight-stay beds, the occupancy rate = $33,000 / (365 * 100) = 90.4\%$. N.B. Occupancy rates calculated for same-day beds could exceed 100%.</p>

Pregnancy

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268966
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The period during which a woman carries a developing fetus, normally in the uterus. Pregnancy lasts for approximately 266 days, from conception until the baby is born, or 280 days from the first day of the last menstrual period. During pregnancy menstruation is absent, there may be a great increase in appetite, and the breasts increase in size; the woman may also experience morning sickness. These and other changes brought about by a hormone (progesterone) produced at first day the ovary and later by the placenta. Definite evidence of pregnancy is provided by various pregnancy tests, by the detection of the heartbeat of the fetus, and by ultrasound.

Service contact

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268983
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	<p>A contact between a patient/client and an ambulatory care health unit (including outpatient and community health units) which results in a dated entry being made in the patient/client record.</p>
<i>Context:</i>	<p>Identifies service delivery at the patient level for mental health services (including consultation/liaison, mobile and outreach services).</p> <p>A service contact can include either face-to-face, telephone or video link service delivery modes. Service contacts would either be with a client, carer or family member or another professional or mental health worker involved in providing care and do not include contacts of an administrative nature (e.g. telephone contact to schedule an appointment) except where a matter would need to be noted on a patient's record.</p> <p>Service contacts may be differentiated from administrative and other types of contacts by the need to record data in the client record. However, there may be instances where notes are made in the client record that have not been prompted by a service contact with a patient/client (e.g. noting receipt of test results that require no further action). These instances would not be regarded as a service contact.</p>
<i>Specialisation of:</i>	Service/care event (Service contact status)

Collection and usage attributes

<i>Comments:</i>	The proposed definition is not able to measure case complexity or level of resource usage with each service contact alone. This limitation also applies to the concept of occasions of service (in admitted patient care) and hospital separations. The National Health Data Committee also acknowledges that information about group sessions or activities that do not result in a dated entry being made in each individual participant's patient/client record is not currently covered by this metadata item.

Service delivery outlet

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268970
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A site from which an organisation, or sub-unit of an organisation, delivers a health/community service.
<i>Context:</i>	Alcohol and other drug treatment services: Required to identify the agency sites that conduct treatment episodes, as distinguished from administration centres. Identification of sites from which health care or community services are delivered facilitates assessment of the accessibility of services to the population.
<i>Specialisation of:</i>	Service provider organisation (Service delivery outlet status)

Collection and usage attributes

<i>Comments:</i>	<p>An organisation may have one or more service delivery outlets. An organisation with a devolved structure for service delivery may or may not devolve all functions to the service delivery outlet level. It is common for administrative functions, including personnel management, to be retained at a higher or central level of an organisation. The service delivery outlet is the lowest level of an organisation at which, or from which, services are delivered. The site from which a service is delivered relates to the physical location of the service and is to be clearly differentiated from the service delivery setting which refers to the type of physical setting in which a service is actually provided to a client (e.g. client's home, non-residential treatment facility etc).</p> <p>For example, where a service provider regularly delivers a service at a variety of clients' homes (e.g. home visits every Monday, Wednesday and Friday) or a mobile service delivers a service to a variety of different locations, then the service delivery outlet should be recorded as the location of the clinic in which the service provider is based. However, where a mobile unit regularly (e.g. every Monday) delivers a service from the same geographical location then this location will be recorded as the service delivery outlet.</p>

Specialised mental health service

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	268984
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Specialised mental health services are those with a primary function to provide treatment, rehabilitation or community health support targeted towards people with a mental disorder or psychiatric disability. These activities are delivered from a service or facility that is readily identifiable as both specialised and serving a mental health care function.
<i>Context:</i>	Hospitals and community mental health establishments and residential mental health establishments.
<i>Specialisation of:</i>	Health service provider (Specialised mental health service status)

Collection and usage attributes

<i>Guide for use:</i>	<p>The concept of a specialised mental health service is not dependent on the inclusion of the service within the state or territory mental health budget.</p> <p>A service is not defined as a specialised mental health service solely because its clients include people affected by a mental disorder or psychiatric disability.</p> <p>The definition excludes specialist drug and alcohol services and services for people with intellectual disabilities, except where they are established to assist people affected by a mental disorder who also have drug and alcohol related disorders or intellectual disability.</p> <p>These services can be a sub-unit of a hospital even where the hospital is not a specialised mental health establishment itself (e.g. designated psychiatric units and wards, outpatient clinics etc.).</p>

Specialised mental health service organisation

Identifying and definitional attributes

<i>Metadata item type:</i>	Object Class
<i>METeOR identifier:</i>	286449
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	A separately constituted specialised mental health service that is responsible for the clinical governance, administration and financial management of service units providing specialised mental health care.
<i>Context:</i>	Specialised mental health services.

Collection and usage attributes

Guide for use: A specialised mental health service organisation may consist of one or more service units based in different locations and providing services in admitted patient, residential and ambulatory settings. For example, a specialised mental health service organisation may consist of several hospitals or two or more community centres.

Where the specialised mental health service organisation consists of multiple service units, those units can be considered to be components of the same organisation where they:

- operate under a common clinical governance arrangement;
- aim to work together as interlocking services that provide integrated, coordinated care to consumers across all mental health service settings; and
- share clinical records or, in the case where is more than one physical clinical record for each patient, staff may access (if required) the information contained in all of the physical records held by the organisation for that patient.

For most states and territories, the Specialised mental health service organisation object class is equivalent to the Area/District Mental Health Service. These are usually organised to provide the full range of admitted patient, residential and ambulatory services to a given catchment population. However, the object class may also be used to refer to health care organisations which provide only one type of mental health service (e.g. acute admitted patient care) or which serve a specialised or state-wide function.

Birth order

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269038
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The sequence number in the multiple birth.
<i>Context:</i>	National Minimum Data Set (NMDS) Perinatal: Required to analyse pregnancy outcome according to birth order and identify the individual baby resulting from a multiple birth pregnancy. Multiple births have higher risks of perinatal mortality and morbidity. Multiple birth pregnancies are often associated with obstetric complications, labour and delivery complications, higher rates of neonatal morbidity, low birthweight , and a higher perinatal death rate. Data Set Specification (DSS) - Health care client identification: While this piece of information is normally recorded for multiple births against the mother's record, if the health care client volunteers the information, it should be recorded.
<i>Property group:</i>	Birth event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare

Cerebral stroke due to vascular disease

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269298
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of previous experience of a cerebral stroke due to vascular disease and the recency of the stroke.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – cerebral stroke due to vascular disease Health, Standard 01/03/2005
--	--

Cessation reason

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269077
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The reason for ending an event or process.
<i>Property group:</i>	Exit/leave from service event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of treatment for alcohol and other drugs – cessation reason Health, Standard 01/03/2005
--	--

Chest pain pattern

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	284815
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	Identification of the frequency and severity of chest pain of myocardial ischaemic origin.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – chest pain pattern Health, Standard 04/06/2004
--	---

Cholesterol level

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269323
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The amount of cholesterol in the blood, usually indicated by a number within a range going from low to high, these numbers being correlated with the risk of coronary heart disease.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
<i>Origin:</i>	Macquarie University 2003. The Macquarie Dictionary 3rd ed. Sydney: The Macquarie Library Pty Ltd.

Compensable status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269123
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of an entitlement for compensation.
<i>Property group:</i>	Funding characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Patient—compensable status Health, Standard 01/03/2005
--	--

Complication

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269096
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A disease or disorder concurrent with another disease, disorder or condition.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
<i>Origin:</i>	Dorland's Illustrated Medical Dictionary 30th ed. Philadelphia: Saunders

Relational attributes

Congenital malformation

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269324
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An anomaly that is present at birth.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – congenital malformation Health, Standard 01/03/2005
--	--

Consumer committee representation arrangements

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	288847
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	An indicator of the extent of formal committee mechanisms in place to promote the participation of mental health consumers.
<i>Property group:</i>	Organisational characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare.
---------------------------------	---

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Specialised mental health service organisation – consumer committee representation arrangements Health, Standard 08/12/2004
--	---

Consumer participation arrangements

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	288859
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	An indicator of whether mechanisms are in place to promote the participation of mental health consumers.
<i>Property group:</i>	Organisational characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Specialised mental health service organisation – consumer participation arrangements (consumer consultants employed) Health, Standard 08/12/2004
	Specialised mental health service organisation – consumer participation arrangements (consumer satisfaction surveys) Health, Standard 08/12/2004
	Specialised mental health service organisation – consumer participation arrangements (formal internal complaints mechanism) Health, Standard 08/12/2004
	Specialised mental health service organisation – consumer participation arrangements (formal participation policy) Health, Standard 08/12/2004
	Specialised mental health service organisation – consumer participation arrangements (regular discussion groups) Health, Standard 08/12/2004

Contract role

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269131
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The assigned responsibility under a contractual arrangement.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Hospital – contract role Health, Standard 01/03/2005
--	--

Contract type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269174
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A descriptor of the class of a contractual agreement.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Hospital – contract type Health, Standard 01/03/2005
--	--

Contracted care commencement date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269263
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The date the period of contracted care commenced.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Contracted hospital care—contracted care commencement date Health, Standard 01/03/2005

Contracted care completed date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269102
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The date the period of contracted care is completed.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Contracted hospital care – contracted care completed date Health, Standard 01/03/2005
--	---

Contracted procedure flag

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269345
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Indicator that a procedure was performed as a contracted service.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of care (procedure) – contracted procedure flag Health, Standard 01/03/2005
--	---

Coordinator of volunteers indicator

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	352858
<i>Registration status:</i>	Health, Standard 05/12/2007
<i>Definition:</i>	An indicator of whether a person is designated to coordinate the volunteer labour force.
<i>Property group:</i>	Organisational characteristics

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Service provider organisation – coordinator of volunteers indicator Health, Standard 05/12/2007
--	--

Coronary artery bypass graft date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	344420
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The date when a coronary artery bypass graft (CABG) is performed.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—coronary artery bypass graft date Health, Standard 01/10/2008
--	--

Coronary artery bypass graft location

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	347157
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The artery where a coronary artery bypass graft has been performed.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – coronary artery bypass graft location Health, Standard 01/10/2008
--	--

Coronary artery disease intervention

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269207
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of whether treatment has been received for a coronary artery condition.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – coronary artery disease intervention Health, Standard 01/03/2005
--	---

Coronary artery stenosis location

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	361082
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The coronary artery in which abnormal narrowing is located.
<i>Property group:</i>	Service provision event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—coronary artery stenosis location Health, Standard 01/10/2008
--	--

Counselling services grants to non-government organisations

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	287013
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	Grants made to non-government organisations for the provision of counselling services.
<i>Property group:</i>	Funding characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Specialised mental health service organisation – counselling services grants to non-government organisations Health, Standard 08/12/2004
--	--

Count of coronary artery lesions attempted

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	344400
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	A count of coronary artery lesions into which an attempt was made to pass a guidewire.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person— count of coronary artery lesions attempted Health, Standard 01/10/2008
--	--

Count of coronary artery lesions successfully dilated

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	344407
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	A count of successful dilatation of lesions (blockages) to restore adequate blood flow through the coronary artery.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person— count of coronary artery lesions successfully dilated Health, Standard 01/10/2008
--	---

Count of coronary artery stents

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	344413
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	A count of tubes made of metal or plastic inserted during an angioplasty procedure into a coronary artery to keep the lumen open and prevent closure.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – count of coronary artery stents Health, Standard 01/10/2008
--	--

Country identifier

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	288063
<i>Registration status:</i>	Health, Standard 04/05/2005 Community services, Standard 30/09/2005
<i>Definition:</i>	The country component of an address.
<i>Property group:</i>	Identifier characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person (address) – country identifier Health, Standard 04/05/2005 Community services, Standard 30/09/2005
--	--

Country of birth

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269206
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 01/03/2005 Housing assistance, Standard 22/10/2005
<i>Definition:</i>	The country in which an individual was born.
<i>Property group:</i>	Demographic/social/cultural characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – country of birth Health, Standard 01/03/2005 Community services, Standard 01/03/2005 Housing assistance, Standard 27/07/2005
--	---

Country of employment in registered profession

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>Synonymous names:</i>	Country of employment
<i>METeOR identifier:</i>	383396
<i>Registration status:</i>	Health, Standard 10/12/2009
<i>Definition:</i>	The country in which a person is working in the registered profession.
<i>Property group:</i>	Labour characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Registered health professional – country of employment in registered profession Health, Standard 10/12/2009
--	---

Creatine kinase isoenzyme level

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	319418
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The level of creatine kinase enzymes found in the blood which (if elevated) indicate damage to either the muscle or brain.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – creatine kinase isoenzyme level Health, Standard 01/10/2008
--	--

Creatine kinase myocardial band isoenzyme measured date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	284969
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The date creatine kinase myocardial band (CK-MB) isoenzyme was measured.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – creatine kinase myocardial band isoenzyme measured date Health, Standard 04/06/2004
--	---

Creatine kinase myocardial band isoenzyme measured time

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	285175
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The time at which the creatine kinase myocardial band (CK-MB) isoenzyme was measured.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Acute coronary syndrome data working group
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – creatine kinase myocardial band isoenzyme measured time Health, Standard 04/06/2004
--	---

Creatine kinase-myocardial band isoenzyme level

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	284893
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The level of creatine kinase-myocardial band (CK-MB) isoenzyme.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – creatine kinase-myocardial band isoenzyme level Health, Standard 04/06/2004
--	--

Creatinine serum level

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269319
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The amount of creatinine in the blood.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – creatinine serum level Health, Standard 01/03/2005
--	---

Creatinine serum level measured date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	343839
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The date when the level of creatinine serum was measured.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—creatinine serum level measured date Health, Standard 01/10/2008
--	---

Date of birth

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269318
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 01/03/2005 Housing assistance, Standard 22/10/2005
<i>Definition:</i>	The date on which an individual was born.
<i>Property group:</i>	Demographic/social/cultural characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – date of birth Health, Standard 01/03/2005 Community services, Standard 01/03/2005 Housing assistance, Standard 27/07/2005
--	--

Date of change to qualification status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269082
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The date on which a newborn qualification status changes.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of admitted patient care (newborn) – date of change to qualification status Health, Standard 01/03/2005
--	---

Date of death

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	287292
<i>Registration status:</i>	Health, Standard 04/05/2005 Community services, Standard 30/09/2005
<i>Definition:</i>	Date on which an individual died.
<i>Context:</i>	
<i>Property group:</i>	Demographic/social/cultural characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – date of death Health, Standard 04/05/2005 Community services, Standard 30/09/2005

Dependency in activities of daily living

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269342
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Recorded 16/11/2009
<i>Definition:</i>	An indicator of the extent to which help is required for tasks of everyday life.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – dependency in activities of daily living Health, Standard 01/03/2005 Community services, Recorded 16/11/2009
--	--

Diabetes mellitus status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269209
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of a risk of developing diabetes mellitus or a diagnosis of diabetes mellitus.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person — diabetes mellitus status Health, Standard 01/03/2005
--	---

Diabetes therapy type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269378
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The class of treatment received for diabetes.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	National diabetes data working group
---------------------------------	--------------------------------------

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – diabetes therapy type Health, Standard 01/03/2005
--	--

Diagnosis date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269392
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The date a disease or condition is diagnosed.
<i>Context:</i>	Health services and clinical setting: Diagnostic information provides the basis for analysis of health service usage, epidemiological studies and monitoring of specific disease entities and conditions.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Patient – diagnosis date Health, Standard 01/03/2005
--	--

Diagnosis related group

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269188
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A resource utilisation classification based on diagnosed conditions, usage of hospital resources, and demographic characteristics of the patient.
<i>Context:</i>	The development of Australian refined diagnosis related groups has created a descriptive framework for studying hospitalisation. Diagnosis related groups provide a summary of the varied reasons for hospitalisation and the complexity of cases a hospital treats. Moreover, as a framework for describing the products of a hospital (that is, patients receiving services), they allow meaningful comparisons of hospitals' efficiency and effectiveness under alternative systems of health care provision.
<i>Property group:</i>	Service provision event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of admitted patient care – diagnosis related group Health, Standard 01/03/2005
--	--

Distant metastasis status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	293228
<i>Registration status:</i>	Health, Standard 13/06/2004
<i>Definition:</i>	The absence or presence of distant metastasis.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
<i>Origin:</i>	Sobin LH (Editors) (1997) International Union Against Cancer (UICC) TNM classification of malignant tumours, 5th edition. Wiley-Liss, New York

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with cancer – distant metastasis status Health, Standard 13/06/2004
--	--

Drug of concern

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269127
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A descriptor of the psychoactive substance that is of concern.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of treatment for alcohol and other drugs – drug of concern Health, Standard 01/03/2005
	Episode of treatment for alcohol and other drugs – drug of concern (principal) Health, Superseded 13/10/2005

Dyslipidaemia treatment with anti-lipid medication indicator

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	304483
<i>Registration status:</i>	Health, Standard 22/09/2005
<i>Definition:</i>	An indicator of the receipt of treatment for abnormal lipid levels using anti-lipid medication.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Related metadata references:</i>	Supersedes Dyslipidaemia treatment status Health, Superseded 22/09/2005
<i>Data Element Concepts implementing this Property:</i>	Person – dyslipidaemia treatment with anti-lipid medication indicator Health, Standard 21/09/2005

Elective care type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>Synonymous names:</i>	Waiting list category
<i>METeOR identifier:</i>	269040
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A descriptor of the class of elective hospital care.
<i>Property group:</i>	Service provision event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Elective care waiting list episode—elective care type Health, Standard 01/03/2005
--	---

Electrocardiogram change location

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	356839
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The area in which the change is located on an electrocardiogram (ECG).
<i>Property group:</i>	Service provision event

Relational attributes

<i>Related metadata references:</i>	Supersedes Electrocardiogram change location Health, Superseded 01/10/2008

Electrocardiogram change type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	285301
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The type of change to the heart rhythm as seen on an electrocardiogram (ECG).
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Electrocardiogram – change type Health, Standard 01/10/2008
	Person – electrocardiogram change type Health, Superseded 01/10/2008

Electrocardiogram date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	343816
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	Date when an electrocardiogram (ECG) is recorded to measure the electrical activity of the heart.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Electrocardiogram – electrocardiogram date Health, Standard 01/10/2008
--	--

Electrocardiogram lead V4R indicator

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	349651
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	An indicator of whether lead V4R is present on the electrocardiogram (ECG).
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Electrocardiogram—lead V4R presence indicator Health, Standard 01/10/2008
--	---

Electrocardiogram Q waves

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	343892
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The initial downward deflection of the QRS complex in an electrocardiogram.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Electrocardiogram—new Q waves indicator Health, Standard 01/10/2008
--	---

Electrocardiogram Q waves indicator

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	347706
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	An indicator of whether Q waves that are greater than or equal to 0.03 seconds in width and greater than or equal to 1mm (0.1mV) in depth are present in at least 2 contiguous leads of the electrocardiogram (ECG).
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – electrocardiogram Q waves indicator Health, Standard 01/10/2008
--	--

Electrocardiogram ST-segment-elevation in lead V4R indicator

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	343883
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	Presence of ST-segment-elevation of greater than or equal to 1mm (0.1mV) in lead V4R
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Electrocardiogram – electrocardiogram ST-segment-elevation in lead V4R indicator Health, Standard 01/10/2008
--	--

Electrocardiogram time

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	343825
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	Time when an electrocardiogram (ECG) is recorded, to measure the electrical activity of the heart.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Electrocardiogram – electrocardiogram time Health, Standard 01/10/2008
--	--

Electronic communication address

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	287451
<i>Registration status:</i>	Health, Standard 04/05/2005 Community services, Standard 30/09/2005
<i>Definition:</i>	The characters used for the purpose of communication by electronic means.
<i>Property group:</i>	Location characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person (address) – electronic communication address Health, Standard 04/05/2005 Community services, Standard 30/09/2005 Service provider organisation (address) – electronic communication address Health, Standard 04/05/2005 Community services, Standard 30/09/2005
--	---

Electronic communication medium

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	287501
<i>Registration status:</i>	Health, Standard 04/05/2005 Community services, Standard 30/09/2005
<i>Definition:</i>	The type of mechanism used for electronic communication.
<i>Property group:</i>	Location characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

Gross capital expenditure

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269024
<i>Registration status:</i>	Health, Standard 01/03/2005 Housing assistance, Standard 10/02/2006
<i>Definition:</i>	Expenditure on the acquisition or enhancement of a non-financial asset .
<i>Property group:</i>	Financial characteristics

Collection and usage attributes

<i>Guide for use:</i>	National health data dictionary specific: Gross capital expenditure is capital expenditure as reported by the particular establishment having regard to state health authority and other authoritative guidelines as to the differentiation between capital and recurrent expenditure. (A concise indication of the basis on which capital and recurrent expenditure have been differentiated is to form part of national minimum data sets). National housing assistance data dictionary specific: Expenditure on the acquisition or enhancement of an asset (excluding financial assets). A non-financial asset is an entity functioning as a store of value, over which ownership may be derived over a period of time, and which is not a financial asset. Capital includes: acquisitions (purchase of properties); construction costs; redevelopment and improvement (of properties); land acquisitions and development; joint ventures.

Human epidermal growth factor receptor-2 test result

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	370564
<i>Registration status:</i>	Health, Standard 06/03/2009
<i>Definition:</i>	The result of human epidermal growth factor receptor-2 (HER2) tests. HER2 is a protein involved in normal cell growth. It is found in high levels on some breast cancer cells.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with cancer – human epidermal growth factor receptor-2 test result Health, Standard 06/03/2009
--	---

Human epidermal growth factor receptor-2 test type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	370578
<i>Registration status:</i>	Health, Standard 06/03/2009
<i>Definition:</i>	The test used to determine the results of human epidermal growth factor receptor-2 (HER2) at the time of diagnosis of the primary tumour.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with cancer – human epidermal growth factor receptor-2 test type Health, Standard 06/03/2009
--	---

Human intent of injury

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	313828
<i>Registration status:</i>	Health, Standard 03/03/2005
<i>Definition:</i>	The human intent of an injury.

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Injury event – human intent of injury Health, Standard 24/11/2005
--	---

Hypertension treatment with antihypertensive medication indicator

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	304493
<i>Registration status:</i>	Health, Standard 22/09/2005
<i>Definition:</i>	An indicator of receipt of therapy for hypertension using antihypertensive medication.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	National diabetes data working group
---------------------------------	--------------------------------------

Relational attributes

<i>Related metadata references:</i>	Supersedes Hypertension treatment status Health, Superseded 22/09/2005

Implantable cardiac defibrillator procedure date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	359606
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The date when an implantable cardiac defibrillator is inserted to detect and treat (by way of an electrical shock) cardiac arrhythmias.
<i>Property group:</i>	Service provision event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—implantable cardiac defibrillator procedure date Health, Standard 01/10/2008
--	---

Implantable cardiac defibrillator procedure time

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	359672
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The time when an implantable cardiac defibrillator is inserted to detect and treat (by way of an electrical shock) cardiac arrhythmias.
<i>Property group:</i>	Service provision event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—implantable cardiac defibrillator procedure time Health, Standard 01/10/2008
--	---

Implementation of National standards for mental health services status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	287789
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	Indicator of National standards for mental health services implementation.
<i>Property group:</i>	Performance indicators

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Specialised mental health service unit – implementation of National standards for mental health services status Health, Standard 08/12/2004

Independent living skills support services grants to non-government organisations

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	287744
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	Grants made to non-government organisations for the provision of independent living skills support.
<i>Property group:</i>	Funding characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Specialised mental health service organisation – independent living skills support services grants to non-government organisations Health, Standard 08/12/2004
--	---

Indicator procedure

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269365
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The type of procedure that is high volume and often associated with long waiting periods.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Elective surgery waiting list episode – indicator procedure Health, Standard 01/03/2005
--	---

Indigenous status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269161
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 01/03/2005 Housing assistance, Standard 22/10/2005
<i>Definition:</i>	An indicator of identification as an Aboriginal and/or Torres Strait Islander.
<i>Property group:</i>	Demographic/social/cultural characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – Indigenous status Health, Standard 01/03/2005 Community services, Standard 01/03/2005 Housing assistance, Standard 01/03/2005

Injecting drug use status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269129
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of the administration of psychoactive substances by injection.
<i>Property group:</i>	Lifestyle characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Client – injecting drug use status Health, Standard 01/03/2005
--	--

Insulin start date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269048
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The date on which insulin injections commenced.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Patient—insulin start date Health, Standard 01/03/2005
--	--

Intended length of hospital stay

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269327
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The expected duration of a stay in hospital.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of admitted patient care – intended length of hospital stay Health, Standard 01/03/2005
--	--

Intended years in profession

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	375481
<i>Registration status:</i>	Health, Standard 10/12/2009
<i>Definition:</i>	The length of time intending to remain practicing in the registered profession.
<i>Property group:</i>	Labour characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Registered health professional – intended years in profession Health, Standard 10/12/2009
--	---

Intention of treatment

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	288666
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	Reason for which treatment is provided for a particular condition.
<i>Property group:</i>	Service provision event

Source and reference attributes

--	---

Interpreter service required status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269289
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 01/03/2005 Housing assistance, Retired 10/02/2006
<i>Definition:</i>	An indicator of a need for a translation service.
<i>Property group:</i>	Demographic/social/cultural characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—interpreter service required Health, Standard 08/02/2006 Community services, Standard 10/04/2006 Person—interpreter service required status (health) Health, Superseded 08/02/2006
--	--

Intra-aortic balloon pump procedure date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	359618
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The date when an intra-aortic balloon pump is inserted to improve the strength of the hearts contraction.
<i>Property group:</i>	Service provision event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—intra-aortic balloon pump procedure date Health, Standard 01/10/2008
--	---

Intra-aortic balloon pump procedure time

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	359686
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The time when an intra-aortic balloon pump is inserted to improve the strength of the hearts contraction.
<i>Property group:</i>	Service provision event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—intra-aortic balloon pump procedure time Health, Standard 01/10/2008
--	---

Intravenous fibrinolytic therapy date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>Synonymous names:</i>	IV fibrinolytic therapy
<i>METeOR identifier:</i>	284981
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The date of intravenous (IV) fibrinolytic therapy.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

Jobseeker status in registered profession

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	383436
<i>Registration status:</i>	Health, Standard 10/12/2009
<i>Definition:</i>	Whether a person is seeking employment in their registered profession.
<i>Property group:</i>	Labour characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Registered health professional – jobseeker status in registered profession Health, Standard 10/12/2009
--	--

Killip classification

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	285143
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	Identifies the Killip class, as a measure of haemodynamic compromise.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – Killip classification Health, Standard 04/06/2004
--	--

Labour augmentation type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269084
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A descriptor of the method used to assist progress of labour.
<i>Property group:</i>	Birth event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Birth event – labour augmentation type Health, Standard 01/03/2005

Length of employment in profession

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	375472
<i>Registration status:</i>	Health, Standard 10/12/2009
<i>Definition:</i>	The length of time spent working in the registered profession.
<i>Context:</i>	Registered health labour force
<i>Property group:</i>	Labour characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Registered health professional – length of employment in profession in Australia Health, Standard 10/12/2009
--	--

Length of stay

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269031
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The duration of an episode of care or service event that includes the provision of accommodation and/or residential care.
<i>Property group:</i>	Performance indicators

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of admitted patient care – length of stay (excluding leave days) Health, Standard 01/03/2005
	Episode of admitted patient care – length of stay (including leave days) Health, Standard 01/03/2005
	Episode of admitted patient care – length of stay (special/neonatal intensive care) Health, Standard 01/03/2005

Level of difficulty with activities in a life area

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	320312
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 16/10/2006
<i>Definition:</i>	An expression of the ease of which tasks and actions in a life area are performed.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – level of difficulty with activities in a life area Health, Standard 29/11/2006 Community services, Standard 16/10/2006
--	--

Level of satisfaction with participation in a life area

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	324441
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 16/10/2006
<i>Definition:</i>	The level of satisfaction with participation in a life area, in relation to current life goals.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – level of satisfaction with participation in a life area Health, Standard 29/11/2006 Community services, Standard 16/10/2006
--	---

Level of service delivery

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	334501
<i>Registration status:</i>	Health, Standard 05/12/2007
<i>Definition:</i>	Level of specialisation of a health service delivered within a defined speciality.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Palliative Care Intergovernmental Forum
---------------------------------	---

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Service provider organisation – level of service delivery Health, Standard 05/12/2007
--	---

Lifestyle counselling type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	344705
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The type of counselling or advice provided to modify lifestyle behaviour.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with acute coronary syndrome – lifestyle counselling type Health, Standard 01/10/2008
--	---

Lipid-lowering therapy status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	285153
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	An indicator of the use of lipid-lowering therapy.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—lipid-lowering therapy status Health, Standard 04/06/2004
--	--

Listing date for care

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269112
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The date on which a patient/client is accepted onto a list for care/treatment.
<i>Property group:</i>	Entry into service event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Elective care waiting list episode – listing date for care Health, Standard 01/03/2005
--	--

Living arrangement

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269314
<i>Registration status:</i>	Health, Standard 19/04/2005 Community services, Standard 01/03/2005
<i>Definition:</i>	An arrangement of living alone or with others.
<i>Property group:</i>	Accommodation/living characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—living arrangement Health, Standard 19/04/2005 Community services, Standard 01/03/2005
--	--

Location of impairment of body structure

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	320262
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 16/10/2006
<i>Definition:</i>	The site where a specified body structure differs from the accepted population standard.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – location of impairment of body structure Health, Standard 29/11/2006 Community services, Standard 16/10/2006
--	--

Lot/section identifier

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269059
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 25/09/2005
<i>Definition:</i>	The lot/section reference allocated to an address in the absence of street numbering.
<i>Context:</i>	Australian addresses.
<i>Property group:</i>	Location characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person (address) – lot/section identifier Health, Standard 01/03/2005 Community services, Standard 30/09/2005 Service provider organisation (address) – lot/section identifier Health, Standard 04/05/2005 Community services, Standard 25/09/2005
--	---

Low-density lipoprotein cholesterol level

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	310787
<i>Registration status:</i>	Health, Standard 27/10/2005
<i>Definition:</i>	The level of the serum cholesterol carried on low-density lipoproteins, approximately 60 to 70 percent of the total serum cholesterol.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
<i>Origin:</i>	Dorland's Illustrated Medical Dictionary 30th ed. Philadelphia: Saunders

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—low-density lipoprotein cholesterol level Health, Standard 01/03/2005
--	--

Lower limb amputation due to vascular disease

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269165
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The removal of a toe, forefoot or leg (above or below knee), due to vascular disease.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—lower limb amputation due to vascular disease Health, Standard 01/03/2005
--	--

Lymphovascular invasion

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	370612
<i>Registration status:</i>	Health, Standard 06/03/2009
<i>Definition:</i>	Presence or absence of the invasion of the cancer cells into the blood vessels or lymphatic channels.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with cancer—lymphovascular invasion Health, Standard 06/03/2009
--	--

Main activity type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	356578
<i>Registration status:</i>	Health, Standard 05/12/2007 Community services, Recorded 04/03/2010
<i>Definition:</i>	A descriptor of the main activity type of an organisation.
<i>Property group:</i>	Organisational characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Health Expenditure Advisory Committee
---------------------------------	---------------------------------------

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Health industry relevant organisation – main activity type Health, Standard 05/12/2007
--	--

Main language other than English spoken at home

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269176
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 01/03/2005 Housing assistance, Standard 22/10/2005
<i>Definition:</i>	The primary language spoken at home, excluding English.
<i>Property group:</i>	Demographic/social/cultural characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – main language other than English spoken at home Health, Standard 01/03/2005 Community services, Standard 01/03/2005 Housing assistance, Standard 10/02/2006
--	--

Major diagnostic category

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269328
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The classification of diagnoses (and Australian refined diagnosis related groups) by body system or aetiology.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of admitted patient care – major diagnostic category Health, Standard 01/03/2005
--	--

Marital status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269101
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 01/03/2005 Housing assistance, Standard 22/10/2005
<i>Definition:</i>	An indicator of involvement in a couple relationship or marriage.
<i>Property group:</i>	Demographic/social/cultural characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – marital status Health, Standard 01/03/2005 Community services, Standard 01/03/2005 Housing assistance, Standard 10/02/2006
--	---

Maternal medical condition

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269069
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Pre-existing and concurrent conditions that affect a pregnancy or its outcome.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Female (pregnant) – maternal medical condition Health, Standard 01/03/2005
--	--

Maximum stenosis coronary artery

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	344331
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The greatest point of an abnormal narrowing in the coronary artery.
<i>Property group:</i>	Physical characteristics

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person — maximum stenosis coronary artery Health, Standard 01/10/2008
--	---

Melanoma thickness

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269185
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The measured depth of penetration of tumour cells below the basal layer of the skin.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with cancer – melanoma thickness Health, Standard 01/03/2005
--	---

Mental health legal status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269297
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of whether care was provided under relevant state or territory mental health legislation compulsory treatment provisions.
<i>Property group:</i>	Legal characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of care – mental health legal status Health, Standard 01/03/2005
--	--

Mental health service duration

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	285847
<i>Registration status:</i>	Health, Standard 08/12/2004
<i>Definition:</i>	The duration of a mental health service contact.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Mental health service contact – mental health service contact duration Health, Standard 08/12/2004
--	---

Mental health services grants to non-government organisations from non-health departments

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	298935
<i>Registration status:</i>	Health, Standard 07/12/2005
<i>Definition:</i>	Grants made to non-government organisations for the provision of mental health services.
<i>Property group:</i>	Funding characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	State or Territory Government – mental health services grants to non-government organisations by non-health departments Health, Standard 07/12/2005
--	---

Method of drug use

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269130
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The manner in which a psychoactive substance is administered.
<i>Property group:</i>	Lifestyle characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Client – method of drug use (principal drug of concern) Health, Standard 01/03/2005
--	---

Microalbumin level

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269284
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The amount of microalbumin detected in the urine.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – microalbumin level Health, Standard 01/03/2005
--	---

Morphology of cancer

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269181
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The histology and likely course of development of a tumour.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with cancer – morphology of cancer Health, Standard 01/03/2005
--	---

Most common service delivery setting

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	297675
<i>Registration status:</i>	Health, Standard 05/12/2007
<i>Definition:</i>	The setting in which most service delivery occurs.
<i>Property group:</i>	Service provision event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Service provider organisation – most common service delivery setting Health, Standard 05/12/2007
--	---

Most recent stroke date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	338258
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	Date when most recent cerebrovascular accident / stroke occurred.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—most recent stroke date Health, Standard 01/10/2008
--	--

Most valid basis of diagnosis of a cancer

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269183
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The most reliable basis of a cancer diagnosis.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with cancer—most valid basis of diagnosis of a cancer Health, Standard 01/03/2005
--	--

Mother's original family name

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>Synonymous names:</i>	Mother's maiden name
<i>METeOR identifier:</i>	269229
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 01/03/2005
<i>Definition:</i>	The family name of an individual's mother before the mother's first marriage.
<i>Property group:</i>	Name characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—mother's original family name Health, Standard 01/03/2005 Community services, Standard 01/03/2005
--	---

Multi-disciplinary team status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269126
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of the involvement of providers from more than one profession or occupation.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Non-admitted patient service event – multi-disciplinary team status Health, Standard 01/03/2005
--	--

Myocardial infarction

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269235
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Gross necrosis of the myocardium as a result of interruption of the blood supply to the area; it is almost always caused by atherosclerosis of the coronary arteries, upon which coronary thrombosis is usually superimposed.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
<i>Origin:</i>	Dorland's Illustrated Medical Dictionary 30th ed. Philadelphia: Saunders

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person — myocardial infarction Health, Standard 01/03/2005
--	--

Name conditional use flag

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	287051
<i>Registration status:</i>	Health, Standard 04/05/2005 Community services, Standard 25/08/2005
<i>Definition:</i>	An indicator of specific conditions which should be applied to a recorded name.
<i>Property group:</i>	Name characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Related metadata references:</i>	Supersedes Name context flag Health, Superseded 04/05/2005, Community services, Superseded 25/08/2005
<i>Data Element Concepts implementing this Property:</i>	Person (name) – name conditional use flag Health, Standard 04/05/2005 Community services, Standard 25/08/2005

Name suffix

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269224
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 01/03/2005
<i>Definition:</i>	An additional term following a name.
<i>Property group:</i>	Name characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person (name) – name suffix Health, Standard 01/03/2005 Community services, Standard 01/03/2005
--	--

Name suffix sequence number

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	288187
<i>Registration status:</i>	Health, Standard 04/05/2005 Community services, Standard 30/09/2005
<i>Definition:</i>	An order of additional terms at the conclusion of a name.
<i>Property group:</i>	Name characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare

--	--

Need for assistance with activities in a life area

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	324428
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 16/10/2006
<i>Definition:</i>	The need for personal assistance and/or supervision to perform tasks and actions in a life area.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – need for assistance with activities in a life area Health, Standard 29/11/2006 Community services, Standard 16/10/2006
--	--

Neoadjuvant therapy indicator

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	370010
<i>Registration status:</i>	Health, Standard 06/03/2009
<i>Definition:</i>	An indicator of the receipt of neoadjuvant therapy such as radiotherapy or systemic therapy (chemotherapy, hormone therapy, immunotherapy).
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with cancer – neoadjuvant therapy indicator Health, Standard 06/03/2009
--	--

Neonatal admitted care (Non-special-care)

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	373636
<i>Registration status:</i>	Health, Standard 03/12/2008
<i>Definition:</i>	Care provided to non-special-care neonatal patients. This is neonatal care not provided in an intensive care facility nor in accommodation approved by the Commonwealth Health Minister for the purpose of the provision of special care.
<i>Property group:</i>	Material resource characteristics

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Available bed – neonatal admitted care (Non-special-care) Health, Standard 03/12/2008
--	---

Neonatal morbidity

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269087
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A diseased condition or state during first 28 days of life.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Admitted patient (neonate) – neonatal morbidity Health, Standard 01/03/2005
--	---

Net capital expenditure

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269033
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Gross capital expenditure less trade-in values of replaced items and receipts from the sale of replaced or otherwise disposed items.
<i>Property group:</i>	Financial characteristics

Source and reference attributes

<i>Submitting organisation:</i>	National minimum data set working parties
---------------------------------	---

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Establishment – net capital expenditure (accrual accounting) (buildings and building services) Health, Standard 01/03/2005
	Establishment – net capital expenditure (accrual accounting) (constructions) Health, Standard 01/03/2005

Number of positive regional lymph nodes

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	289189
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The total number of regional lymph nodes examined by a pathologist and reported as containing tumour. A regional lymph node is a lymph node that drains lymph from the region around a tumor.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with cancer – number of positive regional lymph nodes Health, Standard 04/06/2004
--	---

Number of positive sentinel lymph nodes

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	370545
<i>Registration status:</i>	Health, Standard 06/03/2009
<i>Definition:</i>	The total number of sentinel lymph nodes examined by a pathologist and reported as containing tumour. Sentinel lymph nodes are the first nodes that filter fluid draining away from the area of cancer. The number of lymph nodes with metastasis is important for cancer staging
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with cancer – number of positive sentinel lymph nodes Health, Standard 06/03/2009
--	--

Number of previous caesarean sections

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	298035
<i>Registration status:</i>	Health, Standard 29/11/2006
<i>Definition:</i>	A count of the number of previous caesarean sections.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	National Perinatal Data Development Committee
---------------------------------	---

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Female – number of caesarean sections Health, Standard 29/11/2006
--	---

Number of previous pregnancies

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269051
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A count of previous pregnancies.
<i>Context:</i>	Perinatal statistics: The number of previous pregnancies is an important component of the woman's reproductive history. Parity may be a risk factor for adverse maternal and perinatal outcomes.
<i>Property group:</i>	Health and wellbeing

Collection and usage attributes

<i>Guide for use:</i>	<p>In multiple pregnancies with more than one type of outcome, the pregnancies should be recorded in the following order:</p> <ul style="list-style-type: none">• all live births• stillbirth• spontaneous abortion• induced abortion• ectopic pregnancy <p>A pregnancy resulting in multiple births should be counted as one pregnancy.</p> <p>Where the outcome was one stillbirth and one live birth, count as stillbirth.</p> <p>If a previous pregnancy was a hydatidiform mole, code as spontaneous or induced abortion (or rarely, ectopic pregnancy), depending on the outcome.</p>

Recurrent expenditure

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269132
<i>Registration status:</i>	Health, Standard 13/05/2005 Housing assistance, Standard 01/03/2005
<i>Definition:</i>	Expenditure which does not result in the acquisition or enhancement of an asset.
<i>Property group:</i>	Financial characteristics

Collection and usage attributes

<i>Guide for use:</i>	National Housing Assistance Data Dictionary specific: Recurrent expenditure on goods and services is expenditure, which does not result in the creation or acquisition of fixed assets (new or second-hand). It consists mainly of expenditure on wages, salaries and supplements, purchases of goods and services and consumption of fixed capital (depreciation). When fees charged for goods and services are offset against recurrent expenditure, the result equates to final consumption expenditure in the Australian Bureau of Statistics' national accounts framework. Includes: <ul style="list-style-type: none">• Operating expenses• Tenancy manager revenue and expense components.

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – time since quitting tobacco smoking Health, Standard 01/03/2005
--	--

Timing of ACE-inhibitor prescription

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	349377
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The timing of care when an ACE-inhibitor is prescribed.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – timing of ACE-inhibitor prescription Health, Standard 01/10/2008
--	---

Timing of angiotensin II receptor blocker prescription

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	350414
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The timing of care when an angiotensin II receptor blocker is prescribed.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—timing of angiotensin II receptor blocker prescription Health, Standard 01/10/2008
--	---

Timing of antithrombin therapy prescription

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	350503
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The timing of care when antithrombin therapy is prescribed.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – timing of antithrombin therapy prescription Health, Standard 01/10/2008
--	--

Timing of aspirin prescription

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	347824
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The timing of care when aspirin, a medication having antiinflammatory, analgesic, and antipyretic effects, is prescribed.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – timing of aspirin prescription Health, Standard 01/10/2008
--	---

Timing of beta-blocker prescription

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	349369
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The timing of care when a beta-blocker, a medication to lower heart rate and blood pressure, reduce the risk of heart attack, help control angina symptoms and treat irregular heart rhythms is prescribed.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – timing of beta-blocker prescription Health, Standard 01/10/2008
--	--

Timing of clopidogrel prescription

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	350427
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The timing of care when clopidogrel, an inhibitor of platelet aggregation, is prescribed.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – timing of clopidogrel prescription Health, Standard 01/10/2008
--	---

Timing of glycoprotein IIb/IIIa inhibitor prescription

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	349391
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The timing of care when a glycoprotein IIb/IIIa inhibitor is prescribed.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—timing of glycoprotein IIb/IIIa inhibitor prescription Health, Standard 01/10/2008
--	---

Timing of statin prescription

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	350437
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The timing of care when a statin is prescribed.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—timing of statin prescription Health, Standard 01/10/2008
--	--

Tobacco product smoked

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269276
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The type of tobacco smoked.
<i>Property group:</i>	Lifestyle characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—tobacco product smoked Health, Standard 01/03/2005
--	---

Tobacco smoking daily use status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269279
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of whether tobacco has ever been smoked on a daily basis.
<i>Property group:</i>	Lifestyle characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – tobacco smoking daily use status Health, Standard 01/03/2005
--	---

Tobacco smoking duration

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269280
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The length of time tobacco has been smoked.
<i>Property group:</i>	Lifestyle characteristics

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—tobacco smoking duration Health, Standard 01/03/2005
--	---

Tobacco smoking frequency

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269277
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of how frequently tobacco is smoked.
<i>Property group:</i>	Lifestyle characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – tobacco smoking frequency Health, Standard 01/03/2005
--	--

Tobacco smoking indicator (after twenty weeks of pregnancy)

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	375055
<i>Registration status:</i>	Health, Standard 03/12/2008
<i>Definition:</i>	A self-reported indicator of tobacco smoking after 20 weeks of pregnancy.
<i>Property group:</i>	Lifestyle characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Female (pregnant) – tobacco smoking indicator (after twenty weeks of pregnancy) Health, Standard 03/12/2008
--	---

Tobacco smoking indicator (first twenty weeks of pregnancy)

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	365394
<i>Registration status:</i>	Health, Standard 03/12/2008
<i>Definition:</i>	A self-reported indicator of tobacco smoking in the first twenty weeks of pregnancy.
<i>Property group:</i>	Lifestyle characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Female (pregnant) – tobacco smoking indicator (first twenty weeks of pregnancy) Health, Standard 03/12/2008
--	---

Tobacco smoking quit age

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269274
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The age at which tobacco smoking ceased.
<i>Property group:</i>	Lifestyle characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—tobacco smoking quit age Health, Standard 01/03/2005
--	---

Tobacco smoking start age

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269275
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The age at which tobacco smoking commenced.
<i>Property group:</i>	Lifestyle characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—tobacco smoking start age Health, Standard 01/03/2005
--	--

Tobacco smoking status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269267
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of current and/or past tobacco smoking.
<i>Property group:</i>	Lifestyle characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—tobacco smoking status Health, Standard 01/03/2005
	Person—tobacco smoking status (last three months) Health, Superseded 21/09/2005

Transport mode

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269043
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The act or method of moving an object or person.
<i>Property group:</i>	Transport characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Non-admitted patient emergency department service episode – transport mode Health, Standard 01/03/2005
--	--

Treatment cessation date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269254
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The date on which the treatment is completed or discontinued; or there has been a change in the principal drug of concern, the main treatment type, or the treatment delivery setting.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of treatment for alcohol and other drugs – treatment cessation date Health, Standard 01/03/2005
--	---

Treatment commencement date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269255
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The date of the first service contact in which an assessment and/or treatment occurred, whichever occurred first.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of treatment for alcohol and other drugs – treatment commencement date Health, Standard 01/03/2005
--	--

Treatment type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269107
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The category of health care intervention or therapy.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Episode of treatment for alcohol and other drugs – treatment type Health, Standard 01/03/2005
	Episode of treatment for alcohol and other drugs – treatment type (other) Health, Superseded 13/10/2005

Triage category

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269109
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The classification of a patient assigned according to the urgency of their need for medical and/or nursing care.
<i>Context:</i>	Emergency department care
<i>Property group:</i>	Service/care urgency

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Non-admitted patient emergency department service episode – triage category Health, Standard 01/03/2005
--	---

Triage date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269259
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The date on which a patient is assessed to determine the urgency of their problem and priority for care.
<i>Property group:</i>	Service/care urgency

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Non-admitted patient emergency department service episode – triage date Health, Standard 07/12/2005
	Triage – triage date Health, Superseded 07/12/2005

Triage time

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269360
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The time on which a patient is assessed to determine the urgency of their problem and priority for care.
<i>Property group:</i>	Service/care urgency

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Non-admitted patient emergency department service episode – triage time Health, Standard 07/12/2005
	Triage – triage time Health, Superseded 07/12/2005

Triglyceride level

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>Synonymous names:</i>	TG; Triacylglycerol
<i>METeOR identifier:</i>	269204
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The amount of triglyceride in the blood.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – triglyceride level Health, Standard 01/03/2005
--	---

Troponin assay type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	285213
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	An indicator of the type of troponin assay.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – troponin assay type Health, Standard 04/06/2004
--	--

Troponin level

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	285243
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The amount of troponin.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – troponin level Health, Standard 04/06/2004
--	---

Troponin level measured date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	284987
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The date on which troponin was measured.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – troponin level measured date Health, Standard 04/06/2004
--	---

Troponin level measured time

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	285205
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The time at which troponin was measured.
<i>Property group:</i>	Service provision event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – troponin level measured time Health, Standard 04/06/2004
--	---

Type of acute coronary syndrome related clinical event

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	338250
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	Identifies the clinical event which can impact on health outcomes from acute coronary syndrome.
<i>Property group:</i>	Service provision event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person with acute coronary syndrome – type of acute coronary syndrome related clinical event Health, Standard 01/10/2008
--	--

Type of health or health related function

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	352183
<i>Registration status:</i>	Health, Standard 05/12/2007
<i>Definition:</i>	Type of activity or program provided to prevent or cure disease, care for illness, impairment, disability or handicap, or to support this activity.
<i>Property group:</i>	Organisational characteristics

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Organisation – type of health or health related function Health, Standard 05/12/2007
--	--

Type of visit to emergency department

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269300
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of the reason for arrival at an emergency department.
<i>Property group:</i>	Entry into service event

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Non-admitted patient emergency department service episode – type of visit to emergency department Health, Standard 01/03/2005
--	---

Underlying cause of acute coronary syndrome

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	338303
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	Identifies the condition or acute event, other than the usual risk factors, that precipitated the acute coronary syndrome symptoms.
<i>Property group:</i>	Crisis event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—underlying cause of acute coronary syndrome Health, Standard 01/10/2008
--	--

Underlying cause of death

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	296462
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The disease or injury which initiated the train of events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury. (WHO 2004)
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – underlying cause of death Health, Standard 01/10/2008
--	--

Units of blood transfused

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	344792
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The number of blood units transfused.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person—units of blood transfused Health, Standard 01/10/2008
--	--

Upper limit of normal range for creatine kinase isoenzyme

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	349625
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The value of creatine kinase isoenzyme that is the upper boundary of the normal reference range.
<i>Property group:</i>	Organisational characteristics

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Laboratory standard – upper limit of normal range for creatine kinase isoenzyme Health, Standard 01/10/2008
--	---

Upper limit of normal range for creatine kinase myocardial band isoenzyme

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	284925
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The value of creatine kinase myocardial band (CK-MB) isoenzyme that is the upper boundary of the normal reference range.
<i>Property group:</i>	Organisational characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Acute coronary syndrome data working group
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Laboratory standard – upper limit of normal range for creatine kinase myocardial band isoenzyme Health, Standard 04/06/2004
--	---

Upper limit of normal range for microalbumin

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269283
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The value of microalbumin that is the upper boundary of the normal reference range.
<i>Property group:</i>	Organisational characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Laboratory standard – upper limit of normal range for microalbumin Health, Standard 01/03/2005
--	---

Upper limit of normal range of glycosylated haemoglobin

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269282
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	The value of glycosylated haemoglobin (HbA1c) that is the upper boundary of the normal reference range.
<i>Property group:</i>	Organisational characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Laboratory standard – upper limit of normal range of glycosylated haemoglobin Health, Standard 01/03/2005
--	---

Upper limit of normal range of troponin assay

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	285227
<i>Registration status:</i>	Health, Standard 04/06/2004
<i>Definition:</i>	The value of 'troponin T' or 'troponin I' that is the upper boundary of the normal reference range.
<i>Property group:</i>	Organisational characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Laboratory standard – upper limit of normal range of troponin assay Health, Standard 04/06/2004
--	--

Vascular condition status

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269070
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An indicator of conditions of blood vessels of the body.
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – vascular condition status Health, Standard 01/03/2005
--	--

Vascular procedure

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269072
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Interventions pertaining to the vascular system
<i>Property group:</i>	Health and wellbeing

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
---------------------------------	--

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – vascular procedure Health, Standard 01/03/2005
--	---

Ventricular ejection fraction test date

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	344270
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The date on which the ventricular ejection fraction is measured.
<i>Property group:</i>	Service provision event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Ventricular ejection fraction test – test date Health, Standard 01/10/2008
--	--

Ventricular ejection fraction test performed indicator

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	347667
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	An indicator of whether a test was performed to measure the amount of blood pumped out of the ventricles per heart beat.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Person – ventricular ejection fraction test performed indicator Health, Standard 01/10/2008
--	---

Ventricular ejection fraction test result

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	346986
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The result from the test to measure ventricular ejection fraction.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Ventricular ejection fraction – test result Health, Standard 01/10/2008
--	---

Ventricular ejection fraction test time

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	349813
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The time when the ventricular ejection fraction test is performed.
<i>Property group:</i>	Service provision event

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Ventricular ejection fraction – test time Health, Standard 01/10/2008
--	---

Ventricular ejection fraction test type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	344247
<i>Registration status:</i>	Health, Standard 01/10/2008
<i>Definition:</i>	The type of test used to measure the amount of blood pumped out of a ventricle per heart beat.
<i>Property group:</i>	Health and wellbeing

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Ventricular ejection fraction test – test type Health, Standard 01/10/2008
--	--

Visa type

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	375179
<i>Registration status:</i>	Health, Standard 10/12/2009
<i>Definition:</i>	The category of visa (or travel authority) granted by Australia for foreign nationals (excluding New Zealand citizens) to travel to, enter and remain in Australia.
<i>Property group:</i>	Legal characteristics

Source and reference attributes

<i>Submitting organisation:</i>	Australian Institute of Health and Welfare
<i>Origin:</i>	Further information regarding visas can be obtained from the Australian Department of Immigration and Citizenship or visit their website www.immi.gov.au

Relational attributes

<i>Data Element Concepts implementing this Property:</i>	Registered health professional – visa type Health, Standard 10/12/2009
--	--

Visual acuity

Identifying and definitional attributes

<i>Metadata item type:</i>	Property
<i>METeOR identifier:</i>	269073
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Sharpness or acuteness of vision.
<i>Property group:</i>	Health and wellbeing

Classification schemes

Australian and New Zealand Standard Classification of Occupations, First edition, 2006

Identifying and definitional attributes

<i>Metadata item type:</i>	Classification Scheme
<i>Synonymous names:</i>	ANZSCO 1st edition
<i>METeOR identifier:</i>	350882
<i>Registration status:</i>	Health, Standard 04/07/2007 Community services, Standard 27/03/2007
<i>Definition:</i>	The Australian Bureau of Statistics (ABS) classification for occupations.
<i>Classification structure:</i>	<p>The structure of ANZSCO has five hierarchical levels - major group, sub-major group, minor group, unit group and occupation. The categories at the most detailed level of the classification are termed 'occupations'. These are grouped together to form 'unit groups', which in turn are grouped into 'minor groups'. Minor groups are aggregated to form 'sub-major groups' which in turn are aggregated at the highest level to form 'major groups'.</p> <p>These are the same hierarchical levels that are used in ASCO Second Edition and NZSCO 1999.</p>

Conceptual model

ANZSCO is a skill-based classification used to classify all occupations and jobs in the Australian and New Zealand labour markets.

To do this, ANZSCO identifies a set of occupations covering all jobs in the Australian and New Zealand labour markets, defines these occupations according to their attributes and groups them on the basis of their similarity into successively broader categories for statistical and other types of analysis. The individual objects classified in ANZSCO are jobs.

In ANZSCO, occupations are organised into progressively larger groups on the basis of their similarities in terms of both skill level and skill specialisation.

The conceptual model adopted for ANZSCO uses a combination of skill level and skill specialisation as criteria to design major groups which are meaningful and useful for most purposes. The eight major groups are formed by grouping together sub-major groups using aspects of both skill level and skill specialisation. In designing the major groups, intuitive appeal and usefulness in both statistical and administrative applications were also important considerations.

The skill level criterion is applied as rigorously as possible at the second level of the classification, the sub-major group level, together with a finer application of skill specialisation than that applied at the major group level. Each sub-major group is made up of a number of minor groups.

Minor groups are distinguished from each other mainly on the

basis of a finer application of skill specialisation than that applied at the sub-major group level. Within minor groups, unit groups are distinguished from each other on the basis of skill specialisation and, where necessary, skill level.

Virtually all unit groups are at one skill level. There are only eight unit groups which contain occupations at more than one skill level. In all but two of these unit groups, the vast majority of jobs classified to the unit group are at one skill level only. Data stored at unit group level can therefore be aggregated by skill level with a high degree of validity.

Within unit groups, the distinction between occupations amounts to differences between tasks performed in occupations. All occupations are at one skill level.

As a result, data classified at the major group level will provide only a broad indication of skill level. Data at the sub-major group level will provide a satisfactory indication of skill level for many analytical purposes. Data classified at the unit group level will provide an accurate indication of skill level. Unit groups can, therefore, be aggregated by skill level to provide an indicative measure of occupations classified by skill level.

Glossary items

Activity—functioning, disability and health

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>Synonymous names:</i>	Activity
<i>METeOR identifier:</i>	327296
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 01/03/2005
<i>Definition:</i>	In the context of health, an activity is the execution of a task or action by an individual.
<i>Context:</i>	<p>'Activities and participation' is one of three components that define the concept 'Disability', along with 'Body functions and structures' and 'Environmental factors'. 'Activities and participation' is also encompassed within the concept 'Functioning'.</p> <p>The concept 'Activity', as defined here and as measured in the metadata item Activity difficulty level code (ICF) N, may be relevant to people and human services not related to disability.</p>

Collection and usage attributes

<i>Comments:</i>	<p>Activity limitations are difficulties an individual has in the execution of an activity.</p> <p>The performance of an activity is what the individual does in his or her current environment. The environment includes all aspects of the physical, social and attitudinal world. Activity limitation varies with the environment and is assessed in relation to a particular environment and in the absence or presence of assistance, including aids and equipment.</p> <p>In time, a related and more generic data element may be developed. In the meantime, the addition of 'functioning, disability and health' to the concept of 'ability' indicates that the current concept is based on the concept and framework developed by World Health Organization to assist in the classification and description of functioning and disability, as contained in the ICF.</p> <p>The ICF recognises two constructs that can be used with 'Activities and Participation': performance and capacity. 'Performance' is what the person does in their usual environment. 'Capacity' describes 'an individual's ability to execute a task or an action in a standardised environment, where a standardised environment may be:</p> <ul style="list-style-type: none">• an actual environment commonly used for assessment in test settings; or• in cases where this is not possible, an assumed environment which can be thought to have a uniform impact' (WHO 2001). <p>The standardised environment has not been generally operationalised. However, the recognition of these two constructs in the ICF underscores the importance of recording the environment in which activities are being performed.</p>
------------------	--

This glossary item is based on the International Classification of Functioning, Disability and Health (ICF). The ICF was endorsed by the World Health Assembly in 2001 as a reference member of the WHO Family of International Classifications and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002).

The ICF provides a framework for the description of human functioning and disability. The components of ICF are defined in relation to a health condition. A health condition is an 'umbrella term for disease (acute or chronic), disorder, injury or trauma' (WHO 2001). A health condition may be recorded, for example, as Episode of care principal diagnosis, code (ICD-10-AM 3rd Ed) ANN{.N[N]} and Episode of care additional diagnosis, code (ICD-10-AM 3rd Ed) ANN{.N[N]}.

Address

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327278
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 08/05/2006
<i>Definition:</i>	The referential description of a location where an entity is located or can be otherwise reached or found.

Collection and usage attributes

Comments: Following are the attributes are commonly used in the formation of a full address:

- Address line; (address line is a composite data element containing many attributes of the specific location of a full address - see the current version of the Address line metadata item for further description and a list of its components for addresses located in Australia)
- Address type
- Australian state/territory identifier
- Country identifier
- Non-Australian State/province
- Postal delivery point identifier
- Postcode - Australian
- Postcode - international
- Suburb/town/locality

Some attributes of an address, located within Australia, also provide the elements to determine the **Statistical Local Area (SLA)**. This enables:

- comparison of the use of services by persons residing in different geographical areas,
- characterisation of catchment areas and populations for facilities for planning purposes, and
- documentation of provision of services to clients who reside in other states or territories. The address is also a relevant element in the unambiguous identification of a Health Care Client and a Health Care Provider.

Assistance with activities and participation

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327298
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 01/03/2005
<i>Definition:</i>	The help that a person receives or needs from another person, because of their difficulty in performing an activity or in participating in an area of life.
<i>Context:</i>	<p>'Assistance' is an important subset of Environmental factors that may facilitate (or hinder) the activities or participation of people with disability. Assistance is a key policy and service component in the disability and aged care services field in Australia. Further, it is recognised in the ICF as a crucial factor whose presence (or absence) must be noted when recording measures of functioning and disability.</p> <p>Recording measures of assistance needed or provided will provide further information about activity limitations.</p>

Collection and usage attributes

<i>Comments:</i>	<p>The concept can be used to describe aspects of the environment. Depending on which environment is present or being considered, the measure of assistance indicates what assistance is currently received (in the current or usual environment) and what would be needed (in an optimum environment). 'Need' more generally relates to environmental factors (including personal assistance, equipment and environmental modifications) that are present in an optimum environment but not in the person's current environment. That is, changes may be needed to environmental factors in order to improve a person's functioning and reduce their disability. While these ideas apply generally to 'Environmental Factors' and the related metadata item, Extent of environmental factors influence code [X]N, the concept of 'Assistance' focuses solely on the factor of personal assistance.</p> <p>Measures of assistance and need for assistance are under active development in a number of disciplines and service programs. Assistance may be measured in various ways, for instance in relation to duration, frequency and intensity of assistance. Related data elements are therefore likely to emerge in the future.</p> <p>This glossary item is based on the International Classification of Functioning, Disability and Health (ICF). The ICF was endorsed by the World Health Assembly in 2001 as a reference member of the WHO Family of International Classifications and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002).</p> <p>The ICF provides a framework for the description of human functioning and disability. The components of ICF are defined in relation to a health condition. A health condition is an 'umbrella</p>
------------------	---

term for disease (acute or chronic), disorder, injury or trauma' (WHO 2001). A health condition may be recorded, for example, as Episode of care principal diagnosis, code (ICD-10-AM 3rd Ed) ANN{.N[N]} and Episode of care additional diagnosis, code (ICD-10-AM 3rd Ed) ANN{.N[N]}.

Birthweight

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327212
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	<p>The first weight of the fetus or baby obtained after birth. The World Health Organization further defines the following categories:</p> <ul style="list-style-type: none">• extremely low birthweight: less than 1,000 grams (up to and including 999 grams),• very low birthweight: less than 1,500 grams (up to and including 1,499 grams),• low birthweight: less than 2,500 grams (up to and including 2,499 grams).
<i>Context:</i>	Perinatal

Collection and usage attributes

<i>Comments:</i>	<p>The definitions of low, very low, and extremely low birthweight do not constitute mutually exclusive categories. Below the set limits they are all-inclusive and therefore overlap (i.e. low includes very low and extremely low, while very low includes extremely low).</p> <p>For live births, birthweight should preferably be measured within the first hour of life before significant postnatal weight loss has occurred. While statistical tabulations include 500 gram groupings for birthweight, weights should not be recorded in those groupings. The actual weight should be recorded to the degree of accuracy to which it is measured.</p>

Body functions

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327294
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 16/10/2006
<i>Definition:</i>	Body functions are the physiological functions of body systems (including psychological functions).

Collection and usage attributes

<i>Guide for use:</i>	<p>Body functions are organised according to body systems. The term 'body' refers to the human organism as a whole and includes mental or psychological functions.</p> <p>Body functions are classified in neutral terms. To indicate that there is a problem with a body function requires the use of the impairment extent code to denote the extent or magnitude of the problem together with the body functions code</p>
<i>Comments:</i>	<p>This glossary item is based on the International Classification of Functioning, Disability and Health (ICF). The ICF was endorsed by the World Health Assembly in 2001 as a reference member of the WHO Family of International Classifications and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002).</p> <p>The ICF provides a framework for the description of human functioning and disability. The components of the ICF are defined in relation to a health condition. A health condition is an 'umbrella term for disease (acute or chronic), disorder, injury or trauma' (WHO 2001). A health condition may be recorded, for example, as Episode of care principal diagnosis, code (ICD-10-AM 3rd ed) ANN{.N[N]} and Episode of care additional diagnosis, code (ICD-10-AM 3rd ed) ANN{.N[N]}.</p>

Cessation of treatment episode for alcohol and other drugs

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327302
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Cessation of a treatment episode occurs when treatment is completed or discontinued; or there has been a change in the principal drug of concern, the main treatment type, or the treatment delivery setting.
<i>Context:</i>	Alcohol and other drug treatment services

Collection and usage attributes

<i>Guide for use:</i>	<p>A client is identified as ceasing a treatment episode if one or more of the following apply:</p> <ul style="list-style-type: none">• their treatment plan is completed,• they have had no contact with the treatment provider for a period of three months, nor is there a plan in place for further contact,• their principal drug of concern for alcohol and other drugs has changed,• their main treatment type for alcohol and other drugs has changed,• their treatment delivery setting for alcohol and other drugs has changed,• their treatment has ceased for other reasons (e.g. imprisoned, ceased treatment against advice, transferred to another service provider, died, etc.).

Clinical intervention

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327220
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An intervention carried out to improve, maintain or assess the health of a person, in a clinical situation.
<i>Context:</i>	Health services: Information about the surgical and non-surgical interventions provides the basis for analysis of health service usage, especially in relation to specialised resources, for example theatres and equipment or human resources.

Collection and usage attributes

<i>Comments:</i>	Clinical interventions include invasive and non-invasive procedures, and cognitive interventions. Invasive: (a) Therapeutic interventions where there is a disruption of the epithelial lining generally, but not exclusively, with an implied closure of an incision (e.g. operations such as cholecystectomy or administration of a chemotherapeutic drug through a vascular access device); (b) Diagnostic interventions where an incision is required and/or a body cavity is entered (e.g. laparoscopy with/without biopsy, bone marrow aspiration). Non-invasive: Therapeutic or diagnostic interventions undertaken without disruption of an epithelial lining (e.g. lithotripsy, hyperbaric oxygenation; allied health interventions such as hydrotherapy; diagnostic interventions not requiring an incision or entry into a body part such as pelvic ultrasound, diagnostic imaging). Cognitive: An intervention which requires cognitive skills such as evaluating, advising, planning (e.g. dietary education, physiotherapy assessment, crisis intervention, bereavement counselling).

Disability

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327304
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 01/03/2005 Housing assistance, Standard 01/03/2005
<i>Definition:</i>	<p>Disability is the umbrella term for any or all of: an impairment of body structure or function, a limitation in activities, or a restriction in participation.</p> <p>Disability is a multi-dimensional and complex concept and is conceived as a dynamic interaction between health conditions and environmental and personal factors (WHO 2001:6).</p>

Collection and usage attributes

<i>Comments:</i>	<p>Many different 'definitions' of disability are used in Australia, both in administrative data collections and in Acts of Parliament. The consistent identification of disability in national data collections has been recommended in a number of reports, for instance to enable:</p> <ul style="list-style-type: none">• the monitoring of access to generic services by people with disability;• the collection of more consistent data on disability support and related services, including data on service use by different groups;• population data and service data to be related, thereby improving the nation's analytical capacity in relation to the need for and supply of services; and• improved understanding of the relationship between disability, health conditions and other health outcomes. <p>Defining disability makes it possible to determine the number of people who are accessing services, both disability specific and generic, and also those with a disability in the general population with unmet need. Better definition of disability will aid better targeting of resources to those in need.</p> <p>Disability arises from the interaction between health conditions and environmental and personal factors. A health condition may be a disease (acute or chronic), disorder, injury or trauma. Environmental factors make up the physical, social and attitudinal environment in which people live and conduct their lives. Personal factors relate to the individual, such as age, sex and Indigenous status.</p> <p>The concept 'Disability' can be described using a combination of related metadata items as building blocks.</p> <p>The metadata items selected may vary depending on the definition of disability used. For example, in hospital rehabilitation, the focus may be on the impairment and activity</p>
------------------	---

dimensions and in community-based care the focus may be primarily on participation. Some applications may require a broad scope for inclusion (e.g. discrimination legislation). Data collections relating to services will select combinations of the data elements, which best reflect the eligibility criteria for the service.

This glossary item is based on the International Classification of Functioning, Disability and Health (ICF). The ICF was endorsed by the World Health Assembly in 2001 as a reference member of the WHO Family of International Classifications and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002).

The ICF provides a framework for the description of human functioning and disability. The components of ICF are defined in relation to a health condition. A health condition is an 'umbrella term for disease (acute or chronic), disorder, injury or trauma' (WHO 2001). A health condition may be recorded, for example, as Episode of care principal diagnosis, code (ICD-10-AM 3rd Edn) ANN{.N[N]} and Episode of care additional diagnosis, code (ICD-10-AM 3rd Edn) ANN{.N[N]}.

Emergency department—public hospital

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327228
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	<p>The dedicated area in a public hospital that is organised and administered to provide emergency care to those in the community who perceive the need for or are in need of acute or urgent care.</p> <p>The emergency department must be part of a hospital and be licensed or otherwise recognised as an emergency department by the appropriate state or territory authority.</p> <p>An emergency department provides triage, assessment, care and/or treatment for patients suffering from medical condition(s) and/or injury.</p>
<i>Context:</i>	Emergency department care.

Collection and usage attributes

<i>Comments:</i>	<p>This glossary term has been defined to support the National Minimum Data Set - Non-admitted patient emergency department care. It is not intended as a definitive statement of the role or purpose of an emergency department.</p> <p>The national definition of an emergency department and the care that is provided in an emergency department is characterised by jurisdictional and local differences. For example, there is no national agreement on the identification and classification of emergency department-related settings such as observation units, short stays units, or the use of 'admitted patient beds' located in an emergency department setting.</p> <p>Emergency department is therefore defined as a concept, and not necessarily as a physical premises, setting or site.</p>

Functioning

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327292
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 01/03/2005
<i>Definition:</i>	Functioning is the umbrella term for any or all of: body functions, body structures, activities and participation. Functioning is a multidimensional concept denoting the neutral aspects of the interaction between an individual (with a health condition) and that individual's environmental and personal factors.
<i>Context:</i>	An individual's functioning in a specific domain is an interaction or complex relationship between health conditions and environmental and personal factors. Functioning and disability are dual concepts in a broad framework, with disability focussing on the more negative aspects of this interaction.

Collection and usage attributes

<i>Comments:</i>	<p>This glossary term is based on the International Classification of Functioning, Disability and Health (ICF). The ICF was endorsed by the World Health Assembly in 2001 as a reference member of the WHO Family of International Classifications and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002).</p> <p>The ICF provides a framework for the description of human functioning and disability. The components of ICF are defined in relation to a health condition. A health condition is an 'umbrella term for disease (acute or chronic), disorder, injury or trauma' (WHO 2001). A health condition may be recorded, for example, as Episode of care principal diagnosis, code (ICD-10-AM 3rd edn) ANN{.N[N]} and Episode of care additional diagnosis, code (ICD-10-AM 3rd edn) ANN{.N[N]}.</p>

Geographic indicator

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327306
<i>Registration status:</i>	Health, Standard 01/03/2005 Community services, Standard 01/03/2005
<i>Definition:</i>	<p>A classification scheme that divides an area into mutually exclusive sub-areas based on geographic location.</p> <p>Some geographic indicators are:</p> <ul style="list-style-type: none">• Australian Standard Geographical Classification (ASGC, ABS Cat No. 1216.0),• administrative regions,• electorates,• Accessibility/Remoteness Index of Australia (ARIA),• Rural, Remote and Metropolitan Area Classification (RRMA), and• country.
<i>Context:</i>	To enable the analysis of data on a geographical basis. Facilitates analysis of service provision in relation to demographic and other characteristics of the population of a geographic area.

Collection and usage attributes

<i>Comments:</i>	Person (address) – Australian postcode (Postcode datafile), code [NNNN] is not included in the above listing, as it is, strictly speaking, not a geographic indicator. Sometimes postcodes are used in the analysis of data on a geographical basis, which involves a conversion to Statistical Local Area (an Australian Bureau of Statistics geographical structure). This conversion results in some inaccuracy of information. However, in some data sets Person (address) – Australian postcode (Postcode datafile), code [NNNN]; is the only geographic identifier, therefore the use of other more accurate indicators (for example, conversion from address line to Statistical Local Area) is not always possible.

Impairment of body structure

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327288
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 16/10/2006
<i>Definition:</i>	Impairments of body structure are problems in body structure such as a loss or significant departure from population standards or averages.
<i>Context:</i>	Body structures are classified in ICF in neutral terms. To indicate that there is a problem with a body structure requires the use of the body structures code for the structure affected and the impairment extent code to denote the extent or magnitude of the problem. The impairment nature and impairment location codes can be used to expand the description of a problem with a body structure.

Comments

This glossary term is based on the International Classification of Functioning, Disability and Health (ICF). The ICF was endorsed by the World Health Assembly in 2001 as a reference member of the WHO Family of International Classifications and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002).

The ICF provides a framework for the description of human functioning and disability. The components of ICF are defined in relation to a health condition. A health condition is an 'umbrella term for disease (acute or chronic), disorder, injury or trauma' (WHO 2001). A health condition may be recorded, for example, as Episode of care principal diagnosis, code (ICD-10-AM 3rd edn) ANN{.N[N]} and Episode of care additional diagnosis, code (ICD-10-AM 3rd edn) ANN{.N[N]}.

Further information on the ICF can be found in the ICF itself and the ICF Australian User Guide (AIHW 2003) and the following websites

- WHO ICF website
<http://www.who.int/classifications/icf/en>
- Australian Collaborating Centre ICF website
<http://www.aihw.gov.au/disability/icf/index.html>

Intensive care unit

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327234
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	An intensive care unit (ICU) is a designated ward of a hospital which is specially staffed and equipped to provide observation, care and treatment to patients with actual or potential life-threatening illnesses, injuries or complications, from which recovery is possible. The ICU provides special expertise and facilities for the support of vital functions and utilises the skills of medical, nursing and other staff trained and experienced in the management of these problems.
<i>Context:</i>	Admitted patient care.

Collection and usage attributes

<i>Comments:</i>	<p>There are five different types and levels of ICU defined according to three main criteria: the nature of the facility, the care process and the clinical standards and staffing requirements. All levels and types of ICU must be separate and self-contained facilities in hospitals and, for clinical standards and staffing requirements, substantially conform to relevant guidelines of the Australian Council on Healthcare Standards (ACHS). The five types of ICU are briefly described below:</p> <ul style="list-style-type: none">• Adult intensive care unit, level 3: must be capable of providing complex, multisystem life support for an indefinite period; be a tertiary referral centre for patients in need of intensive care services and have extensive backup laboratory and clinical service facilities to support the tertiary referral role. It must be capable of providing mechanical ventilation, extracorporeal renal support services and invasive cardiovascular monitoring for an indefinite period; or care of a similar nature.• Adult intensive care unit, level 2: must be capable of providing complex, multisystem life support and be capable of providing mechanical ventilation, extracorporeal renal support services and invasive cardiovascular monitoring for a period of at least several days, or for longer periods in remote areas or care of a similar nature (see ACHS guidelines).• Adult intensive care unit, level 1: must be capable of providing basic multisystem life support usually for less than a 24-hour period. It must be capable of providing mechanical ventilation and simple invasive cardiovascular monitoring for a period of at least several hours; or care of a similar nature.• Paediatric intensive care unit: must be capable of providing complex, multisystem life support for an indefinite period; be a tertiary referral centre for children needing intensive care;
------------------	--

and have extensive backup laboratory and clinical service facilities to support this tertiary role. It must be capable of providing mechanical ventilation, extracorporeal renal support services and invasive cardiovascular monitoring for an indefinite period to infants and children less than 16 years of age; or care of a similar nature.

- Neonatal intensive care unit, level 3: must be capable of providing complex, multisystem life support for an indefinite period. It must be capable of providing mechanical ventilation and invasive cardiovascular monitoring; or care of a similar nature. Definitions for high-dependency unit and coronary care unit are under development.

Live birth

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327248
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A live birth is defined by the World Health Organization to be the complete expulsion or extraction from the mother of a baby, irrespective of the duration of the pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of the voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. Each product of such a birth is considered live born.

Neonate

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327284
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A live birth who is less than 28 days old.
<i>Context:</i>	Perinatal.

Collection and usage attributes

<i>Comments:</i>	The neonatal period is exactly four weeks or 28 completed days, commencing on the date of birth (day 0) and ending on the completion of day 27. For example, a baby born on 1 October remains a neonate until completion of the four weeks on 28 October and is no longer a neonate on 29 October.

Newborn qualification status

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327254
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Qualification status indicates whether the patient day within a newborn episode of care is either qualified or unqualified.
<i>Context:</i>	Admitted patient care: To provide accurate information on care provided in newborn episodes of care through exclusion of unqualified patient days.

Collection and usage attributes

<i>Guide for use:</i>	<p>A newborn qualification status is assigned to each patient day within a newborn episode of care.</p> <p>A newborn patient day is qualified if the infant meets at least one of the following criteria:</p> <ul style="list-style-type: none">• is the second or subsequent live born infant of a multiple birth, whose mother is currently an admitted patient,• is admitted to an intensive care facility in a hospital, being a facility approved by the Commonwealth Minister for the purpose of the provision of special care,• is admitted to, or remains in hospital without its mother. <p>A newborn patient day is unqualified if the infant does not meet any of the above criteria.</p> <p>The day on which a change in qualification status occurs is counted as a day of the new qualification status.</p> <p>If there is more than one qualification status in a single day, the day is counted as a day of the final qualification status for that day.</p>
<i>Comments:</i>	<p>All babies born in hospital are admitted patients.</p> <p>The newborn baby's qualified days are eligible for health insurance benefits purposes and the patient day count under the Australian Health Care Agreements. In this context, newborn qualified days are equivalent to acute days and may be denoted as such.</p> <p>The days when a newborn baby does not meet these criteria are classified as unqualified (if they are nine days old or less) and should not be counted as patient days under the Australian Health Care Agreements and are not eligible for health insurance benefit purposes.</p>

Overnight-stay patient

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327256
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	A patient who, following a clinical decision, receives hospital treatment for a minimum of one night, i.e. who is admitted to and separated from the hospital on different dates.
<i>Context:</i>	Admitted patient care

Collection and usage attributes

<i>Comments:</i>	<p>An overnight-stay patient in one hospital cannot be concurrently an overnight-stay patient in another hospital, unless they are receiving contracted care. If not under a hospital contract, a patient must be separated from one hospital and admitted to the other hospital on each occasion of transfer.</p> <p>An overnight-stay patient of a hospital (originating hospital) who attends another hospital (the destination hospital) on a contracted basis is to be regarded by the originating hospital as an overnight-stay patient, as if the patient had not left for contracted hospital care.</p> <p>Treatment provided to an intended same-day patient who is subsequently classified as an overnight-stay patient is regarded as part of the overnight episode.</p> <p>A non-admitted (emergency/outpatient) service provided to a patient who is subsequently classified as an admitted patient shall be regarded as part of the admitted episode. Any occasion of service should be recorded and identified as part of the admitted patient's episode of care.</p> <p>Patients who leave of their own accord, die or are transferred on their first day in hospital are not overnight-stay patients.</p>

Palliative care agency

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	356474
<i>Registration status:</i>	Health, Standard 05/12/2007
<i>Definition:</i>	A palliative care agency is an organisation or organisational sub-unit that provides specialist palliative care and receives Australian or state/territory government funding (including Australian Health Care Agreement funding), or does not provide specialist palliative care but receives Australian Health Care Agreement funding to provide care incorporating a palliative approach or palliative care-related services.

Collection and usage attributes

<i>Guide for use:</i>	<p>'Specialist palliative care' services work substantively in the area of palliative care they would usually provide consultative and ongoing care for people with a life-limiting illness and provide support for primary carers and family members, provide multi-disciplinary healthcare and employ healthcare professionals who have qualifications or experience in palliative care.</p> <p>Care may be provided in admitted patient and/or community settings. Community settings include outpatient facilities.</p> <p>A palliative care agency represents the level of an organisation that is responsible for the care provided to clients (i.e. care coordination) regardless of whether the agency provides this care directly or purchases the care on behalf of clients.</p>

Participation—functioning, disability and health

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>Synonymous names:</i>	Participation
<i>METeOR identifier:</i>	327312
<i>Registration status:</i>	Health, Standard 29/11/2006 Community services, Standard 06/06/2005
<i>Definition:</i>	In the context of health, participation is involvement in a life situation.
<i>Context:</i>	<p>Involvement refers to the lived experience of people in the actual context in which they live. This context includes 'Environmental Factors' - all aspects of the physical, social and attitudinal world.</p> <p>The individual's degree of involvement can be reflected by this glossary item when combined with Participation extent code (ICF 2001) X and Participation satisfaction level code X.</p> <p>'Activities and participation' is one of three components that define the concept 'Disability', along with 'Body functions and structures' and 'Environmental factors'. 'Activities and participation' is also encompassed within the concept 'Functioning'.</p> <p>The concept 'Participation', as defined here and as measured in the metadata items Participation extent code (ICF 2001) X and Participation satisfaction level code X, may be relevant to people and human services not related to disability.</p>

Collection and usage attributes

<i>Comments:</i>	<p>Participation restrictions are problems an individual may experience in involvement in life situations.</p> <p>In time, a related and more generic data element may be developed. In the meantime, the addition of 'functioning, disability and health' to the name of this glossary item indicates that the current concept is based on the concept and framework developed by World Health Organization to assist in the classification and description of functioning and disability, as contained in the International Classification of Functioning, Disability and Health (ICF).</p> <p>This glossary item is based on the International Classification of Functioning, Disability and Health (ICF). The ICF was endorsed by the World Health Assembly in 2001 as a reference member of the WHO Family of International Classifications and of the Australian Family of Health and Related Classifications (endorsed by the National Health Information Management Group in 2002).</p> <p>The ICF provides a framework for the description of human functioning and disability. The components of ICF are defined in relation to a health condition. A health condition is an 'umbrella term for disease (acute or chronic), disorder, injury or trauma' (WHO 2001). A health condition may be recorded, for example,</p>
------------------	--

as Episode of care principal diagnosis, code (ICD-10-AM 3rd edn) ANN{.N[N]} and Episode of care additional diagnosis, code (ICD-10-AM 3rd edn) ANN{.N[N]}.

Record linkage

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327264
<i>Registration status:</i>	Community services, Standard 01/03/2005 Health, Standard 01/03/2005
<i>Definition:</i>	A process, technique or method that enables the bringing together of two or more records that are believed to belong to the same individual.
<i>Context:</i>	Record linkage may facilitate improved service provision, treatment or case management to individual clients.

Collection and usage attributes

<i>Comments:</i>	<p>Linkage can occur across data systems or within data systems and may be done by using a range of identifiers.</p> <p>For statistical purposes, including planning, research or the measurement of service or program outcomes, record linkage facilitates separating multiple items clustered around individuals from total counts (for example, double counting of clients can be reduced when calculating total numbers of clients across several agencies).</p> <p>The proposed use of a linkage key in the Home and Community Care program (HACC) Minimum Data Set is intended to make it possible to count the number of HACC clients (without counting clients more than once) and the services which they receive. The Commonwealth-State Territory Disability Agreement National Minimum Data Set is using the statistical linkage key based on that for the HACC Minimum Data Set.</p>

Registered nurse

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327182
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	Registered nurses include persons with at least a three year training certificate and nurses holding post graduate qualifications. Registered nurses must be registered with the state/territory registration board. This is a comprehensive category and includes community mental health, general nurse, intellectual disability nurse, midwife (including pupil midwife), psychiatric nurse, senior nurse, charge nurse (now unit manager), supervisory nurse and nurse educator. This category also includes nurses engaged in administrative duties no matter what the extent of their engagement, for example, directors of nursing and assistant directors of nursing.

Revenue (patient)

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>Synonymous names:</i>	Patient revenue
<i>METeOR identifier:</i>	357539
<i>Registration status:</i>	Health, Standard 05/12/2007
<i>Definition:</i>	Patient revenue comprises all revenue received by, and due to, an establishment in respect of individual patient liability for accommodation and other establishment charges. All patient revenue is to be grouped together regardless of source of payment (Commonwealth, health fund, insurance company, direct from patient) or status of patient (whether inpatient or non-inpatient, private or compensable). Gross revenue should be reported.

Revenue (recoveries)

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	357541
<i>Registration status:</i>	Health, Standard 05/12/2007
<i>Definition:</i>	<p>All revenue received that is in the nature of a recovery of expenditure incurred. This would include:</p> <ul style="list-style-type: none">• income received from the provision of meals and accommodation to members of staff of the hospital (assuming it is possible to separate this from income from the provision of meals and accommodation to visitors);• income received from the use of hospital facilities by salaried medical officers exercising their rights of private practice and by private practitioners treating private patients in hospital; and• other recoveries such as those relating to inter-hospital services where the revenue relates to a range of different costs and cannot be clearly offset against any particular cost.

Generally, gross revenues should be reported but, where inter-hospital payments for transfers of goods and services are made, offsetting practices are acceptable to avoid double counting. Where a range of inter-hospital transfers of goods and services is involved and it is not possible to allocate the offsetting revenue against particular expenditure categories, then it is acceptable to bring that revenue in through recoveries.

Separation

Identifying and definitional attributes

<i>Metadata item type:</i>	Glossary Item
<i>METeOR identifier:</i>	327268
<i>Registration status:</i>	Health, Standard 01/03/2005
<i>Definition:</i>	<p>Separation is the process by which an episode of care for an admitted patient ceases. A separation may be formal or statistical.</p> <p>Formal separation: The administrative process by which a hospital records the cessation of treatment and/or care and/or accommodation of a patient.</p> <p>Statistical separation: The administrative process by which a hospital records the cessation of an episode of care for a patient within the one hospital stay.</p>
<i>Context:</i>	Admitted patient care.

Collection and usage attributes

<i>Comments:</i>	<p>This treatment and/or care provided to a patient prior to separation occurs over a period of time and can occur in hospital and/or in the person's home (for hospital-in-the-home patients).</p> <p>While this concept is also applicable to non-Admitted patient care and welfare services, different terminology to 'separation' is often used in these other care settings.</p>

Companion guide

What are the national data dictionaries?

The national data dictionaries contain standard data definitions and data elements for use in any Australian health or community services data collection. They are the authoritative source of information about endorsed national metadata standards and provide the basis for consistent national collection and reporting. The national metadata standards are approved by the Australian government and all state and territory relevant health and community services departments as well as the Australian Bureau of Statistics (ABS) and the Australian Institute of Health and Welfare (AIHW). This work is funded under the Australian Health Minister's Advisory Council (AHMAC) and the Community Services and Disability Minister's Advisory Council (CSDMAC).

Where possible, metadata standards in the dictionary are consistent with other national standard classifications to ensure overall comparability of national data. The Australian Bureau of Statistics is the source of many key socioeconomic classifications used in data collections, for example, the Australian Standard Classification of Languages (ASCL), the Australian Standard Geographic Classification (ASGC) and the Australian and New Zealand Standard Classifications of Occupations (ANZSCO).

The data dictionaries have been downloaded from METeOR, which is an online metadata registry for developing, registering and disseminating metadata based on the second edition of the international standard ISO/IEC 11179 Information Technology-Metadata registries (MDR) in 2003. For more information about METeOR see the 'METeOR' section on page [2727](#). The national health and community services data dictionaries are also available online at www.meteor.aihw.gov.au.

Governance

The national health and community services data dictionaries are, respectively, initiatives under the National Health Information Agreement, auspiced by the AHMAC, and the National Community Services Information Agreement, auspiced by the CSDMAC.

Under these agreements, all parties agree to ensure that the collection, compilation and interpretation of national information are appropriate and are carried out efficiently. This requires agreement on definitions, standards and rules for collecting information, and on guidelines for coordinating the access, interpretation and publication of national health and community services information.

The national health and community services data standards are agreed to by the respective state, territory and Australian Government departments of health and community services, the ABS and the AIHW.

Why use metadata standards?

Making data count

Metadata standards promote the quality, accuracy, interpretability, reliability, relevance, interchangeability, transparency, currency, accessibility, coherence and comparability of data and information.

Without metadata standards there is the potential for data to fail to measure what it is supposed to measure, or not be comparable across collections or over time.

Metadata standards enable consistent and comparable reporting of information about services, including describing what services are available, where they are located and how much they cost. Such standards also achieve consistency when reporting about people, for instance, who delivered a service and when, who received the service, and what happened to them as a result.

By making endorsed metadata standards readily available, users are assured that they can use these standards with confidence and that they will enable the maximum reuse of their data for future research: 'create once, use often'.

How are metadata standards developed?

Creating metadata standards is part of data development

Data development is the process of building a data set for a specific purpose. For example, one might wish to build a data set that supports research into cancer diagnoses, treatment and outcomes, or one that supports statistical reporting about the operations of hospital emergency departments.

Data development demands a clear understanding of why the data are needed – for example, to underpin the design and evaluation of health policy, or to assess the performance of health services, or to support research into patterns of disease.

It also requires an assessment of the practicalities of collecting the data. Building almost any data set will demand the assembly of data from multiple sources. Thus there must be an understanding of the diverse information systems from which data are drawn; and there must be an effort to apply or develop common standards for concepts, classifications, terminologies, data values and so on.

The quality of data, including its consistency and comparability, is enhanced when metadata standards are used to support the collection and use of a data set.

Metadata standards development process

The data development process is outlined below.

1. Project proposal stage

A submission is made to the relevant data committee outlining the following:

- the purpose and scope of the project
- a business case for adoption

- details of national consultation, including the composition of the data working group, (comprising members with expertise in the subject area of the data development project)
- the nominated project manager responsible for managing the data development project
- expected timeframes for completion of the data development project.

2. Data development stage

The project manager works with the AIHW's METeOR and Metadata Unit and the data working group to develop the metadata items that will be stored in the national metadata registry system, METeOR.

Data collected for national reporting purposes must be defined in a standardised way. The standard adopted for health data is the International Standards Organisation's metadata registry standard (ISO/CEN 11179:2003).

For more information about the data development process, see the AIHW publication *A guide to data development*, available at:

<http://www.aihw.gov.au/publications/index.cfm/title/10422>.

3. Metadata standards review stage

The AIHW's METeOR and Metadata Unit undertakes a quality assurance review of the proposed metadata standards. This involves assessing all metadata standards for issues such as technical integrity, compliance with ISO 11179 and consistency with other standards, and the clarity of the content.

During this stage, the project manager receives feedback, makes adjustments and reports back to the data working group if required.

4. Endorsement of metadata standards

Once a final metadata assessment has been conducted, and the METeOR and Metadata Unit has provided a certification of the quality of the metadata standards, the metadata is submitted to the relevant endorsing body for final endorsement as a national standard.

Registration status progression

The registration status is the value assigned to a metadata item as it progresses through the standards development and review process.

The registration statuses in METeOR are:

Proposed

- A developer has submitted this item for consideration by the METeOR registrar.

Recorded

- The METeOR registrar has conducted an initial technical review and determined that the item meets basic quality criteria.

Candidate

- The item has been compliance checked by the METeOR registrar and is ready for further development or review by the data developer.

Standardisation pending

- The item has undergone a final compliance check by the METeOR registrar and the data working group has recommended the item to a registration authority for approval as a standard.

Standard

- The item has been endorsed by a registration authority as a national data standard.

Superseded

- A registration authority has superseded this item with another standard.

Retired

- The item has been nominated by registration authority as retired.

Not progressed

- The item will no longer be considered by the registrar, a data committee or a registration authority.

Who benefits from using metadata standards?

Information managers use standard formats and definitions to support the receipt, transfer, storage and management of data.

Program managers use data standards as the basis for describing information requests (that is, data required under formal service or funding agreements, and contracts); measuring service activity, client flows, client characteristics and service usage; understanding demand; better planning of services; describing unmet need (need comparability of population and survey data); and understanding ways to integrate service delivery, resulting in better targeting and usage of services and ultimately cost savings.

Researchers use data standards as the common language to support survey work, as well as to integrate data from other sources.

Policy makers need aggregated information for future policy, management and funding decisions, that is, information to support comparisons across jurisdictions, programs and sectors.

Statisticians use data standards for interpreting and analysing data; analysing results; linking data sets for statistical purposes; and carrying out time series analysis (over a period of time) and longitudinal studies (over a period of time within groups).

Metadata structure

The metadata standards are based on the 2003 version of the ISO/IEC 11179 international standard for metadata registries. Part three of the standard is a model for a metadata registry and the formulation of metadata items.

There are six types of metadata defined by ISO/IEC 11179 that have been applied to METeOR and the data dictionaries:

- object class
- property

- data element concept
- data element
- value domain
- classification scheme.

The structure underlying a data element in the dictionary is illustrated in Figure 1.

Types of metadata

Dashed lines show metadata types that are additional to or different from the ISO/IEC standard.

Figure 1: The 11179 model of metadata representation.

Components of data elements

The things that we want to know about include ideas (knowledge), persons, organisations, the environment and events. These things are termed *Object classes*. Some examples of object classes are 'Person', 'Dwelling' and 'Service provider organisation'. A characteristic of the object class is known as a *Property*. It is normally the item of interest. For example, the object class 'Person' can have properties such as 'Sex' and 'Date of birth'.

A *Data element concept* is defined as a concept created by the union of an object class and a property. Only one object class and one property can be joined for each data element concept, for example, 'Person – date of birth'.

As can be seen from Figure 1, a *Data element* is formed when a data element concept is represented in the real world by a set of values (a *Value domain*).

A value domain specifies how something is to be represented. A value domain can specify:

- the range of permitted values, for example, a measure of weight in grams represented by three numeric characters
- all permissible values as a set of codes, for example, 'Code 1 Female', 'Code 2 Male'
- the values referenced from a nationally or internationally endorsed classification, such as all codes in the ASCL 2005, or all activity codes listed in the International statistical

classification of diseases and related health problems, Tenth revision, Australian modification, 5th edition (ICD-AM).

A *Glossary item* defines the meaning of a term within a specific context. Examples of glossary items include 'Adoption' and 'Family'. These are not currently defined as object classes but their meaning must be clarified as part of the data development process.

Data set specifications

A data set specification (DSS) is a grouping of a number of data elements and the conditions under which they are collected. A DSS defines:

- the scope of the collection, that is, the population that is the target of the data development
- the level at which the data will be collected and reported
- whether the inclusion of each data element is mandatory, optional or conditional, and the sequence in which data elements are included.

National minimum data sets

A national minimum data set (NMDS) is a type of DSS, made up of a minimum set of data elements agreed by the national health or community services information groups for mandatory collection and reporting at a national level. An NMDS may include data elements that are also included in another NMDS.

An NMDS is contingent upon a national agreement to collect uniform data and to supply it as part of the national collection, but does not preclude agencies and service providers from collecting additional data to meet their own specific needs.

An example of an NMDS is the Juvenile Justice NMDS, which is used to obtain information about young people under juvenile justice supervision in Australia.

Non-mandatory data set specifications

DSSs are data sets that are not mandated for national collection and reporting, but are recommended as best practice.

For example, the Diabetes (clinical) Data Set Specification is a non-mandatory data set which aims to ensure national consistency in relation to defining, monitoring and recording information on patients diagnosed with diabetes.

Integration of data elements in data dictionaries

The national health and community services data dictionaries contain about one hundred integrated data items that can be used consistently across the health and community services sectors. This is especially important for services that straddle sector boundaries such as aged care, mental health, drug and alcohol services, and services for people with a disability.

Examples of integrated data items are:

Address data items

[Address line, text \[X\(180\)\]](#)

[Australian postcode, code \(Postcode datafile\) {NNNN}](#)

Australian state/territory identifier, code N

Street name, text [A(30)]

Suburb/town/locality name, text [A(50)]

Personal and demographic data items

Activity and participation life area, code (ICF 2001) AN[NNN]

Age, total years N[NN]

Person – country of birth, code (SACC 2008) NNNN

Date of birth, DDMMYYYY

Family name, text X[X(39)]

Given name, text [X(40)]

Indigenous status, code N

Informal carer existence indicator, code N

Interpreter service required, yes/no code N

Labour force status, code N

Main language other than English spoken at home, code (ASCL 2005) NN{NN}

Marital status, code N

Mother's original family name, text [X(40)]

Occupation (main), code (ANZSCO 1st edition) N[NNN]{NN}

Person identifier, XXXXXX[X(14)]

Preferred language, code (ASCL 2005) NN{NN}

Proficiency in spoken English, code N

Sex, code N

Year of first arrival in Australia, date YYYY

Service provider organisation data items

Organisation end date, DDMMYYYY

Organisation name, text [X(200)]

Organisation start date, DDMMYYYY

Date items

Accuracy indicator, code AAA

Formulation of good data standards

- 1 A metadata item must have, at least, a name and a definition.**
- 2 A metadata item can have an explicitly stated context within which the definition has meaning.**
- 3 The name of the standard version of the metadata item must follow certain criteria:**
 - the name must be unique within the context of the metadata item
 - the name must be stated in the singular
 - the name must reflect the concept being defined
 - the name must avoid the use of abbreviations or acronyms other than those widely accepted (for example radar, laser, pH)
 - the name should avoid the use of words that imply a preselected single instance.

4 Definition rules and guidelines

A definition must:

- be stated in the singular
- state what the concept is, not only what it is not
- be stated as a descriptive phrase or sentence(s)
- contain only commonly understood abbreviations
- be expressed without embedding definitions of other data or underlying concepts.

A data definition should:

- be expressed without embedding rationale, functional usage, domain information or procedural information
- state the essential meaning of the concept
- be precise and unambiguous
- be concise
- be able to stand alone
- avoid circular reasoning
- use the same terminology and consistent logical structure for related definitions
- contain information appropriate for the type of metadata item being defined
- use a preferred term to represent the definition of a concept specified elsewhere in the document
- pass the substitution test.

5 Context should be closely linked to definition.

6 Information must be included in a metadata item attribute only if it is appropriate for that attribute or metadata item.

- Context
 - Metadata can exist within a specific context.
 - Only information that is relevant to the environment or framework within which the definition for the metadata item is valid must be included in the Context attribute.
 - The contexts of two metadata items must be compatible when the definition of one metadata item references a term defined in another.
- Guide for use

Guide for use information must be included in any metadata item only if it is intended to provide advice or interpretation on how to use the particular metadata item or data collected using the metadata item.

 - In metadata items other than Data elements, Guide for use information should be about how to use the item itself and not about any data that can be collected or used.
 - Data elements can also include information about how to use or interpret the data in the Guide for use.
- Collection methods

The Collection methods attribute must only include information about how data is to be collected. The following metadata items must not have a metadata attribute of Collection methods

 - Object class
 - Property
 - Data element concept
 - Value domain
 - Glossary item.
- Permissible values in a Value domain must
 - be exhaustive within the set
 - be made into an exhaustive set of values by adding an 'Other' to aggregate all other possibilities not covered by the stated set of values
 - be mutually exclusive within the set
 - be a true representation of the concept defined in the data element.
- When allocating code values
 - avoid the use of a code value for 'Other' that is contiguous with the last code in the sequence of permissible values or that, in any other way, do not provide for inclusions in the future
 - wherever possible, avoid the use of a coded value for 'Other' that may be commonly used as a supplementary value.
- Supplementary values
 - Supplementary values must not be included in a Value domain unless it is necessary.

- Do not include valid Permissible values in the Supplementary values attribute of a Value domain.
- Avoid the use of values that are contiguous with the last code in the permissible value sequence.
- To limit variations in the meaning within a specific data collection, use a default supplementary value meaning of 'Not stated/inadequately described'.
- When using more than one supplementary value, use a logical set.
- It is appropriate that the Supplementary value field size is the same number of characters as the permissible value.
- Consistent use of supplementary codes/values across the data elements in a data set should be applied.
- In non-enumerated Value domains (that is those without defined value meanings such as in a measurement) the supplementary value used should not be a valid permissible value.

7 Always use a standard format for referencing publications and not a mixture of referencing methods.

METeOR

METeOR is the AIHW's online metadata registry.

METeOR currently integrates and presents information about:

- the *National health data dictionary*
- the *National community services data dictionary*
- the *National housing assistance data dictionary*
- national minimum data sets
- data set specifications.

METeOR includes the following tools:

- data search and browse tools that allow navigation of data standards of varying levels of endorsement and across the health, community services and housing assistance sectors
- data view, collation and download tools
- data development tools, including areas in which multiple data developers may collaborate on the development of data standards
- data submission tools that enable data developers to submit draft metadata standards for consideration as national standards
- data management tools that allow the registrar to change the registration status of metadata standards under authorisation of one or more registration authorities
- comprehensive guidelines for developing and reviewing metadata.

METeOR is based on the 2003 version of the ISO/IEC 11179, titled 'Information technology – metadata registries (MDR)'. This standard was applied to provide a detailed registry architecture in which metadata standards can be better defined, navigated and managed throughout the data development lifecycle. METeOR is an Internet-based application accessible through the following web address: www.meteor.aihw.gov.au.

Data elements listed by technical name

Administrative health region – palliative care strategic plan indicator, yes/no code N	65
Administrative health region – region name, text [A(80)].....	64
Admitted patient (neonate) – neonatal morbidity, code (ICD-10-AM 7th edn) ANN{.N[N]}	1041
Admitted patient care waiting list episode – scheduled admission date, DDMMYYYY.....	1450
Admitted patient hospital stay – number of patient days (of contracted care), total N[NN]	1673
Admitted patient hospital stay – operating theatre time, total minutes NNNN	997
Adult – body mass index (measured), ratio NN[N].N[N].....	166
Adult – body mass index (self-reported), ratio NN[N].N[N]	169
Adult – waist circumference risk indicator, Caucasian adult code N.....	1742
Adult – waist-to-hip ratio, N.NN.....	1744
Available bed – neonatal admitted care (Non-special-care), average number of beds N[NNN.N]	138
Available bed – overnight-stay admitted care, average number of beds N[NNN.N].....	130
Available bed – residential mental health care, average number of beds N[NNN.N].....	133
Available bed – same-day admitted care, average number of beds N[NNN.N]	135
Birth event – anaesthesia administered, code N	82
Birth event – analgesia administered, code N.....	84
Birth event – baby resuscitation method, code N.....	1439
Birth event – birth method, code N.....	977
Birth event – birth plurality, code N.....	148
Birth event – birth presentation, code N	1218
Birth event – complication (postpartum), code (ICD-10-AM 7th edn) ANN{.N[N]}.....	1209
Birth event – complication, code (ICD-10-AM 7th edn) ANN{.N[N]}	272
Birth event – labour augmentation type, code N.....	1698
Birth event – labour induction type, code N	1712
Birth event – labour onset type, code N.....	1112
Birth event – setting of birth (actual), code N.....	33
Birth event – setting of birth (intended), code N	889
Birth event – state/territory of birth, code N	1575
Birth – Apgar score (at 1 minute), code NN	92
Birth – Apgar score (at 5 minutes), code NN.....	93
Birth – birth order, code N	146
Birth – birth status, code N	1577
Birth – birth weight, total grams NNNN	872
Cancer staging – cancer staging scheme source edition number, code N[N].....	1567
Cancer staging – cancer staging scheme source, code N	1565
Cancer staging – staging basis of cancer, code A.....	1563

Cancer treatment – cancer treatment type, code N	212
Cancer treatment – intention of treatment, code N	893
Cancer treatment – non-surgical cancer treatment completion date, DDMMYYYY	202
Cancer treatment – non-surgical cancer treatment start date, DDMMYYYY	203
Cancer treatment – outcome of treatment, code N.N.....	1138
Cancer treatment – radiation dose received, total Gray N[NNNN]	1279
Cancer treatment – radiotherapy treatment type, code N.....	1265
Cancer treatment – surgical procedure date, DDMMYYYY	389
Cancer treatment – surgical procedure for cancer, procedure code (ACHI 7th edn) NNNNN-NN.....	1599
Cancer treatment – systemic therapy agent name (primary cancer), antineoplastic drug code (Self-Instructional Manual for Tumour Registrars Book 8 3rd edn) X[X(39)]	1601
Cancer treatment – target site for cancer treatment, code (ICD-10-AM 7th edn) ANN{.N[N]}.....	214
Cancer treatment – target site for cancer treatment, code (ICDO-3) ANN	215
Child – body mass index (measured), ratio NN[N].N[N]	172
Child – body mass index (self-reported), ratio NN[N].N[N].....	175
Client – injecting drug use status, code N	883
Client – method of drug use (principal drug of concern), code N	979
Community nursing service episode – first contact date, DDMMYYYY	368
Community nursing service episode – goal of care, code NN.....	656
Community nursing service episode – last contact date, DDMMYYYY	376
Community nursing service episode – nursing intervention, code N.....	1104
Contracted hospital care – contracted care commencement date, DDMMYYYY	296
Contracted hospital care – contracted care completed date, DDMMYYYY.....	297
Contracted hospital care – organisation identifier, NNX[X]NNNNN	291
Date – accuracy indicator, code AAA.....	338
Division of general practice – organisation identifier, NNN	443
Elective care waiting list episode – category reassignment date, DDMMYYYY.....	239
Elective care waiting list episode – elective care type, code N	1747
Elective care waiting list episode – listing date for care, DDMMYYYY	926
Elective surgery waiting list episode – anticipated accommodation status, code N	90
Elective surgery waiting list episode – clinical urgency, code N.....	264
Elective surgery waiting list episode – extended wait patient indicator, code N	530
Elective surgery waiting list episode – indicator procedure, code NN	815
Elective surgery waiting list episode – overdue patient status, code N.....	1148
Elective surgery waiting list episode – patient listing status, readiness for care code N.....	1157
Elective surgery waiting list episode – reason for removal from a waiting list, code N.....	1277
Elective surgery waiting list episode – surgical specialty (of scheduled doctor), code NN	1597
Elective surgery waiting list episode – waiting list removal date, DDMMYYYY.....	1403

Elective surgery waiting list episode – waiting time (at a census date), total days N[NNN]	1752
Elective surgery waiting list episode – waiting time (at removal), total days N[NNN]	1755
Electrocardiogram – electrocardiogram date, DDMMYYYY	367
Electrocardiogram – electrocardiogram time, hhmm	1613
Electrocardiogram – ST-segment-elevation in lead V4R indicator, yes/no code N	450
Electrocardiogram – bundle-branch block status, code N	197
Electrocardiogram – change location, code N	453
Electrocardiogram – change type, code N	455
Electrocardiogram – heart rhythm type, code N[N]	764
Electrocardiogram – lead V4R presence indicator, yes/no code N	452
Electrocardiogram – new Q waves indicator, yes/no code N	448
Emergency department stay – physical departure date, DDMMYYYY	472
Emergency department stay – physical departure time, hhmm	474
Episode of admitted patient care (mental health care) – referral destination, code N	1392
Episode of admitted patient care (newborn) – date of change to qualification status, DDMMYYYY	355
Episode of admitted patient care (newborn) – number of qualified days, total N[NNNN]	1086
Episode of admitted patient care (procedure) – procedure commencement date, DDMMYYYY	384
Episode of admitted patient care – admission date, DDMMYYYY	67
Episode of admitted patient care – admission mode, code N	998
Episode of admitted patient care – admission time, hhmm	70
Episode of admitted patient care – admission urgency status, code N	1719
Episode of admitted patient care – condition onset flag, code N	274
Episode of admitted patient care – diagnosis related group, code (AR-DRG v 6) ANNA	438
Episode of admitted patient care – intended length of hospital stay, code N	887
Episode of admitted patient care – inter-hospital contracted patient status, code N	895
Episode of admitted patient care – length of stay (excluding leave days), total N[NN]	913
Episode of admitted patient care – length of stay (including leave days), total N[NN]	914
Episode of admitted patient care – length of stay (including leave days) (antenatal), total N[NN]	916
Episode of admitted patient care – length of stay (including leave days) (postnatal), total N[NN]	918
Episode of admitted patient care – length of stay (special/neonatal intensive care), total daysN[NN]	1072
Episode of admitted patient care – major diagnostic category, code (AR-DRG v 6) NN	949
Episode of admitted patient care – number of days of hospital-in-the-home care, total {N[NN]}	1074
Episode of admitted patient care – number of leave days, total N[NN]	1674
Episode of admitted patient care – number of leave periods, total N[N]	1082
Episode of admitted patient care – patient election status, code N	71

Episode of admitted patient care – procedure, code (ACHI 7th edn) NNNNN-NN	1244
Episode of admitted patient care – referral source, public psychiatric hospital code NN.....	1482
Episode of admitted patient care – separation date, DDMMYYYY	1451
Episode of admitted patient care – separation mode, code N	1000
Episode of admitted patient care – separation time, hhmm	1455
Episode of care (community setting) – first service delivery date, DDMMYYYY	370
Episode of care (procedure) – contracted procedure flag, code N	292
Episode of care – additional diagnosis, code (ICD-10-AM 7th edn) ANN{.N[N]}	49
Episode of care – behaviour-related risk factor intervention purpose, code N.....	142
Episode of care – behaviour-related risk factor intervention, code NN.....	140
Episode of care – funding eligibility indicator (Department of Veterans Affairs), code N	403
Episode of care – mental health legal status, code N	962
Episode of care – number of psychiatric care days, total N[NNNN].....	1677
Episode of care – nursing diagnosis (other), code (NANDA 1997-98) N.N[.N]{.N}{.N}{.N}	1100
Episode of care – nursing diagnosis (principal), code (NANDA 1997-98) N.N[.N]{.N}{.N}{.N}	1102
Episode of care – principal diagnosis, code (ICD-10-AM 7th edn) ANN{.N[N]}	1237
Episode of care – principal source of funding, hospital code NN.....	632
Episode of care – specialist private sector rehabilitation care indicator, code N	1561
Episode of residential care – episode end date, DDMMYYYY	499
Episode of residential care – episode end mode, code N	501
Episode of residential care – episode start date, DDMMYYYY	503
Episode of residential care – episode start mode, code N	505
Episode of residential care – number of episodes of residential care, total N[NNN]	1078
Episode of residential care – number of leave days, total N[NN].....	907
Episode of residential care – referral destination (mental health care), code N.....	1390
Episode of treatment for alcohol and other drugs – cessation reason, code N[N].....	1267
Episode of treatment for alcohol and other drugs – client type, code N.....	258
Episode of treatment for alcohol and other drugs – drug of concern (other), code (ASCDC 2000 extended) NNNN	1130
Episode of treatment for alcohol and other drugs – drug of concern (principal), code (ASCDC 2000 extended) NNNN	1239
Episode of treatment for alcohol and other drugs – number of service contacts, total N[NN].....	1092
Episode of treatment for alcohol and other drugs – referral source, code NN.....	1479
Episode of treatment for alcohol and other drugs – service delivery setting, code N.....	1681
Episode of treatment for alcohol and other drugs – treatment cessation date, DDMMYYYY	353
Episode of treatment for alcohol and other drugs – treatment commencement date, DDMMYYYY	356
Episode of treatment for alcohol and other drugs – treatment type (main), code N.....	946
Episode of treatment for alcohol and other drugs – treatment type (other), code [N].....	1133

Establishment (community mental health) – recurrent expenditure (non-salary operating costs) (financial year), total Australian currency N[N(8)].....	1361
Establishment (mental health) – full-time equivalent staff (paid), total N[NNN{.N}]	577
Establishment (mental health) – recurrent expenditure (non-salary operating costs) (financial year), total Australian currency N[N(8)].....	1291

Female – number of previous pregnancies (stillbirth), total N[N]	1228
Female – parity, total N[N]	1152
Functional stress test – stress test intensity, code N	629
Functional stress test – assessment of cardiac perfusion, code N[N].....	627
Functional stress test – ischaemic and perfusion outcome result, code N	625
Functional stress test – stress test element, code N	628
Functional stress test – test date, DDMMYYYY	372
Health industry relevant organisation – main activity type, code NNN	750
Health industry relevant organisation – source of revenue, public and private code NNN	1473
Health professional – occupation, code ANN.....	255
Health service event – fasting indicator, code N	547
Health service event – presentation date, DDMMYYYY	393
Health service event – presentation time, hhmm	1628

Health service event – referral to rehabilitation service date, DDMMYYYY	385
Hospital census (of elective surgery waitlist patients) – census date, DDMMYYYY	240
Hospital service – care type, code N[N].N	220
Hospital – contract role, code A	293
Hospital – contract type, code N	294
Household – gross income (annual), dollar range code N	796
Household – gross income (annual), ten thousand dollar range code N[N]	798
Individual service provider – occupation (self-identified), code (ANZSCO 1st edition) N[NNN]{NN}	1253
Individual service provider – occupation end date, DDMMYYYY	1256
Individual service provider – occupation start date, DDMMYYYY	1257
Injury event – activity type, code (ICD-10-AM 7th edn) ANNNN	30
Injury event – activity type, non-admitted patient code N[N]	31
Injury event – external cause, code (ICD-10-AM 7th edn) ANN{.N[N]}	535
Injury event – external cause, non-admitted patient code NN	537
Injury event – external cause, text [X(100)]	1031
Injury event – human intent of injury, code NN	540
Injury event – nature of main injury, non-admitted patient code NN{.N}	1036
Injury event – place of occurrence, code (ICD-10-AM 7th edn) ANN{.N[N]}	1188
Injury event – place of occurrence, non-admitted patient code N[N]	1190
Jurisdiction – Australian state/territory identifier, code N	119
Laboratory standard – upper limit of normal range for creatine kinase myocardial band isoenzyme, total units per litre N[NNN]	322
Laboratory standard – upper limit of normal range for creatine kinase myocardial band isoenzyme, index code X[XXX]	323
Laboratory standard – upper limit of normal range for creatine kinase myocardial band isoenzyme, total kCat per litre N[NNN]	324
Laboratory standard – upper limit of normal range for creatine kinase myocardial band isoenzyme, total micrograms per litre N[NNN]	326
Laboratory standard – upper limit of normal range for creatine kinase myocardial band isoenzyme, total nanograms per decilitre N[NNN]	327
Laboratory standard – upper limit of normal range for creatine kinase myocardial band isoenzyme, percentage N[NNN]	329
Laboratory standard – upper limit of normal range for creatine kinase isoenzyme, total units per litre N[NNN]	331
Laboratory standard – upper limit of normal range for microalbumin, albumin/creatinine ratio N[NN].N	989
Laboratory standard – upper limit of normal range for microalbumin, total micrograms per minute N[NN].N	991
Laboratory standard – upper limit of normal range for microalbumin, total milligrams per 24 hour N[NN].N	993
Laboratory standard – upper limit of normal range for microalbumin, total milligrams per litre N[NN].N	995

Laboratory standard – upper limit of normal range for troponin assay, total micrograms per litre N[NNN]	1688
Laboratory standard – upper limit of normal range of glycosylated haemoglobin, percentage N[N].N	652
Medical practitioner – hours on-call, total NNN	780
Mental health service contact – patient/client participation indicator, yes/no code N	971
Mental health service contact – service contact date, DDMMYYYY	967
Mental health service contact – service contact duration, total minutes NNN	969
Mental health service contact – session type, code N	973
Non-admitted patient emergency department service episode – episode end date, DDMMYYYY	476
Non-admitted patient emergency department service episode – episode end time, hhmm.....	478
Non-admitted patient emergency department service episode – episode end status, code N	480
Non-admitted patient emergency department service episode – service commencement date, DDMMYYYY	469
Non-admitted patient emergency department service episode – service commencement time, hhmm.....	482
Non-admitted patient emergency department service episode – service episode length, total minutes NNNNN	911
Non-admitted patient emergency department service episode – transport mode (arrival), code N.....	467
Non-admitted patient emergency department service episode – triage date, DDMMYYYY	390
Non-admitted patient emergency department service episode – triage time, hhmm.....	1625
Non-admitted patient emergency department service episode – triage category, code N.....	1683
Non-admitted patient emergency department service episode – type of visit to emergency department, code N.....	1715
Non-admitted patient emergency department service episode – waiting time (to hospital admission), total hours and minutes NNNN	485
Non-admitted patient emergency department service episode – waiting time (to service delivery), total minutes NNNNN.....	487
Non-admitted patient service event – multi-disciplinary team status, code N.....	1014
Non-admitted patient service event – new/repeat status, code N	1060
Non-admitted patient service event – patient present status, code N	1159
Non-admitted patient service event – service event type (clinical), code N[N].....	1462
Non-admitted patient service event – service mode, hospital code N{.N}	1460
Occupied bed – hospital in the home care, average number of beds N[NNN.N]	128
Organisation – capital consumption expenses, total Australian currency NNNNN.N	216
Organisation – employee related expenses, total Australian currency NNNNN.N.....	488
Organisation – expenses, total Australian currency NNNNN.N	1121
Organisation – purchase of goods and services, total Australian currency NNNNN.N	1258
Organisation – revenue, total Australian currency NNNNN.N.....	1126
Organisation – type of health or health related function, code NNN.....	1700

Patient – compensable status, code N	270
Patient – diagnosis date (cancer), DDMMYYYY	363
Patient – diagnosis date (diabetes mellitus), YYYY	1811
Patient – diagnosis date (first recurrence of cancer), DDMMYYYY	365
Patient – diagnosis date, DDMMYYYY	362
Patient – hospital insurance status, code N	778
Patient – initial visit since diagnosis indicator (diabetes mellitus), code N	881
Patient – insulin start date, YYYY	1808
Patient – number of psychiatric outpatient clinic/ day program attendances (financial year), total days N[NN]	1067
Patient – previous specialised treatment, code N	1230
Person (address) – address line, text [X(180)]	51
Person (address) – address type, code N	57
Person (address) – Australian postcode, code (Postcode datafile) {NNNN}	1200
Person (address) – building/complex sub-unit identifier, [X(7)]	186
Person (address) – building/complex sub-unit type, code A[AAA]	189

Person (address) – non-Australian state/province, text [X(40)]	1061
Person (address) – postal delivery point identifier, {N(8)}	1192
Person (address) – postal delivery service type identifier, [X(11)]	1196
Person (address) – street name, text [A(30)]	1579
Person (address) – street suffix, code A[A]	1583
Person (address) – street type, code A[AAA]	1587
Person (address) – suburb/town/locality name, text [A(50)]	1591
Person (identifier) – identifier type, geographic/administrative scope code A	1179
Person (male) – erectile dysfunction, code N	507
Person (name) – family name, text X[X(39)]	542
Person (name) – given name sequence number, code N	642
Person (name) – given name, text [X(40)]	644
Person (name) – name conditional use flag, code N	1017
Person (name) – name suffix sequence number, code N	1021

Person (name) – name suffix, text [A(12)].....	1019
Person (name) – name title sequence number, code N	1025
Person (name) – name title, text [A(12)].....	1023
Person (name) – name type, code N	1027
Person (telephone) – telephone number type, code A	1607
Person with acute coronary syndrome – acute coronary syndrome related clinical event date, DDMMYYYY	344
Person with acute coronary syndrome – acute coronary syndrome related clinical event time, hhmm.....	1611
Person with acute coronary syndrome – bleeding location, instrumented code N(N)	885
Person with acute coronary syndrome – bleeding location, non-instrumented code N(N)	1064
Person with acute coronary syndrome – lifestyle counselling type, code N	922
Person with acute coronary syndrome – pharmacotherapy type prescribed in hospital, code N[N].....	1181
Person with acute coronary syndrome – pharmacotherapy type taken post discharge from hospital, code N[N]	1183
Person with acute coronary syndrome – type of acute coronary syndrome related clinical event experienced, code N[N].....	38
Person with acute coronary syndrome – underlying cause of acute coronary syndrome, code N.....	1136
Person with cancer – degree of spread of a cancer, code N.....	397
Person with cancer – distant metastasis status, M stage (UICC TNM Classification of Malignant Tumours, 6th edn) code XX.....	204
Person with cancer – extent of primary cancer, TNM stage (UICC TNM Classification of Malignant Tumours, 6th ed) code XXXX{[X]XX}	210
Person with cancer – histopathological grade, code N	776
Person with cancer – human epidermal growth factor receptor-2 test result, code N	800
Person with cancer – human epidermal growth factor receptor-2 test type, code N	803
Person with cancer – laterality of primary cancer, code [N]	905
Person with cancer – lymphovascular invasion, code N	939
Person with cancer – melanoma thickness (at diagnosis), total millimetres NNN.NN	1694
Person with cancer – morphology of cancer, code (ICDO-3) NNNN/N	1006
Person with cancer – most valid basis of diagnosis of a cancer, code N	1010
Person with cancer – neoadjuvant therapy indicator, code N	1039
Person with cancer – number of positive regional lymph nodes, total N[N]	1401
Person with cancer – number of positive sentinel lymph nodes, total code N[N].....	1085
Person with cancer – number of regional lymph nodes examined, total code N[N].....	1088
Person with cancer – number of sentinel lymph nodes examined, total code N[N]	1090
Person with cancer – oestrogen receptor assay result, code N	1110
Person with cancer – primary site of cancer, code (ICD-10-AM 7th edn) ANN{.N[N]}.....	1233
Person with cancer – primary site of cancer, code (ICDO-3) ANN{.N[N]}	1235

Person with cancer – primary tumour status, T stage (UICC TNM Classification of Malignant Tumours, 6th ed) code XX[X].....	208
Person with cancer – progesterone receptor assay results, code N.....	1249
Person with cancer – region of first recurrence of cancer, code N	1399
Person with cancer – regional lymph node metastasis status, N stage (UICC TNM Classification of Malignant Tumours, 6th ed) code XX.....	206
Person with cancer – solid tumour size (at diagnosis), total millimetres NNN	1691
Person – accommodation type (prior to admission), code N.....	1713
Person – accommodation type (usual), code N[N].....	1695
Person – activity and participation life area, code (ICF 2001) AN[NNN]	27
Person – acute coronary syndrome procedure type, code NN	35
Person – acute coronary syndrome related medical history, code NN	42
Person – acute coronary syndrome risk stratum, code N.....	46
Person – acute coronary syndrome symptoms onset date, DDMMYYYY	380
Person – acute coronary syndrome symptoms onset time, hhmm	1618
Person – age range, code NN.....	76
Person – age, total years N[NN].....	74
Person – alcohol consumption amount (self-reported), total standard drinks NN	80
Person – alcohol consumption frequency (self-reported), code NN	78
Person – angina episodes count (24 hours preceding hospital presentation), total number NN[N].....	1077
Person – angina status, Canadian Cardiovascular Society code N	86
Person – angiotensin converting enzyme inhibitors therapy status, code NN	88
Person – area of usual residence, geographical location code (ASGC 2009) NNNNN	106
Person – aspirin therapy status, code NN	109
Person – Australian state/territory identifier, code N.....	124
Person – Australian state/territory of birth, code N.....	121
Person – beta-blocker therapy status, code NN	144
Person – bleeding episode status, Thrombolysis in Myocardial Infarction (TIMI) code N	150
Person – blindness, code N	152
Person – blood pressure (diastolic) (measured), millimetres of mercury NN[N]	154
Person – blood pressure (systolic) (measured), millimetres of mercury NN[N].....	157
Person – bodily location of main injury, code NN	160
Person – body function, code (ICF 2001) AN[NNNN]	163
Person – body mass index (classification), code N[.N]	178
Person – body structure, code (ICF 2001) AN[NNNN]	183
Person – cardiovascular disease condition targeted by drug therapy, code NN	199
Person – cardiovascular medication taken (current), code N	218
Person – cataract status, code N	237
Person – cerebral stroke due to vascular disease (history), code N	243

Person – chest pain pattern, code N	247
Person – cholesterol level (measured), total millimoles per litre N[N].N	253
Person – clinical evidence status (acute coronary syndrome related medical history), yes/no code N.....	260
Person – clinical procedure timing, code N.....	263
Person – clopidogrel therapy status, code NN.....	266
Person – congenital malformation, code (BPA 1979) ANN.N[N]	278
Person – congenital malformation, code (ICD-10-AM 7th edn) ANN{.N[N]}.....	277
Person – coronary artery bypass graft date, DDMMYYYY	359
Person – coronary artery bypass graft location, code N	300
Person – coronary artery disease intervention (history), code N	301
Person – coronary artery stenosis location, code N.....	303
Person – count of coronary artery lesions attempted, total number N[N].....	1069
Person – count of coronary artery lesions successfully dilated, total number N[N]	1070
Person – count of coronary artery stents, total number N[N].....	1071
Person – country of birth, code (SACC 2008) NNNN	304
Person – C-reactive protein level (measured), total milligrams per litre N[NN].N.....	198
Person – C-reactive protein level measured date, DDMMYYYY	337
Person – C-reactive protein level measured time, hhmm.....	1609
Person – creatine kinase isoenzyme level (measured), total units per litre N[NNN].....	332
Person – creatine kinase myocardial band isoenzyme level (measured), index code X[XXX]	310
Person – creatine kinase myocardial band isoenzyme level (measured), total kCat per litre N[NNN]	312
Person – creatine kinase myocardial band isoenzyme level (measured), total nanograms per decilitre N[NNN]	316
Person – creatine kinase myocardial band isoenzyme level (measured), percentage N[NNN]	318
Person – creatine kinase myocardial band isoenzyme measured date, DDMMYYYY	342
Person – creatine kinase myocardial band isoenzyme measured time, hhmm.....	1610
Person – creatine kinase-myocardial band isoenzyme level (measured), total micrograms per litre N[NNN]	314
Person – creatine kinase-myocardial band isoenzyme level (measured), total units per litre N[NNN]	320
Person – creatinine serum level measured date, DDMMYYYY.....	343
Person – creatinine serum level, total micromoles per litre NN[NN].....	334
Person – date of birth, DDMMYYYY	345
Person – date of birth, MMYYYY	1004
Person – date of death, DDMMYYYY	360
Person – dependency in activities of daily living (bathing), code N.....	405
Person – dependency in activities of daily living (bed mobility), code N.....	407
Person – dependency in activities of daily living (bladder continence), code N	409

Person – dependency in activities of daily living (bowel continence), code N	411
Person – dependency in activities of daily living (dressing), code N	415
Person – dependency in activities of daily living (eating), code N	417
Person – dependency in activities of daily living (extra surveillance), code N	421
Person – dependency in activities of daily living (mobility), code N	425
Person – dependency in activities of daily living (toileting), code N	429
Person – dependency in activities of daily living (transferring), code N	431
Person – diabetes mellitus status, code NN.....	433
Person – diabetes therapy type, code NN.....	436
Person – diagnostic cardiac catheterisation date, DDMMYYYY	366
Person – diagnostic cardiac catheterisation time, hhmm	1612
Person – dyslipidaemia treatment with anti-lipid medication indicator (current), code N	444
Person – electrocardiogram Q waves indicator, yes/no code N	446
Person – eligibility status, Medicare code N	959
Person – end-stage renal disease status (diabetes complication), code N.....	1407
Person – environmental factor, code (ICF 2001) AN[NNN]	496
Person – extent of environmental factor influence, code (ICF 2001) [X]N	874
Person – extent of impairment of body function, code (ICF 2001) N.....	809
Person – extent of impairment of body structure, code (ICF 2001) N.....	812
Person – extent of participation in a life area, code (ICF 2001) N.....	532
Person – fibrinolytic drug administered, code N.....	553
Person – fibrinolytic therapy status, code NN	554
Person – foot deformity indicator, code N.....	567
Person – foot lesion indicator (active), code N.....	569
Person – foot ulcer indicator (current), code N	573
Person – foot ulcer indicator (history), code N	571
Person – formal community support access indicator (current), code N.....	575
Person – functional stress test performed indicator, yes/no code N.....	631
Person – glycoprotein IIb/IIIa receptor antagonist status, code NN.....	650
Person – glycosylated haemoglobin level (measured), percentage N[N].N	654
Person – government funding identifier, Centrelink customer reference number {N(9)A}	241
Person – government funding identifier, Department of Veterans’ Affairs file number AAXXNNNNA	400
Person – government funding identifier, Medicare card number N(11).....	957
Person – health professionals attended for diabetes mellitus (last 12 months), code N	761
Person – heart rate, total beats per minute N[NN].....	763
Person – height (measured), total centimetres NN[N].N	766
Person – height (self-reported), total centimetres NN[N]	770
Person – high-density lipoprotein cholesterol level (measured), total millimoles per litre [N].NN.....	249

Person – hip circumference (measured), total centimetres NN[N].N	773
Person – hypertension treatment with antihypertensive medication indicator (current), code N.....	805
Person – implantable cardiac defibrillator procedure date, DDMMYYYY	373
Person – implantable cardiac defibrillator procedure time, hhmm	1614
Person – Indigenous status, code N.....	819
Person – informal carer existence indicator, code N	878
Person – interpreter service required, yes/no code N	897
Person – intra-aortic balloon pump procedure date, DDMMYYYY	374
Person – intra-aortic balloon pump procedure time, hhmm.....	1615
Person – intravenous fibrinolytic therapy date, DDMMYYYY.....	375
Person – intravenous fibrinolytic therapy time, hhmm.....	1616
Person – Killip classification, code N.....	900
Person – labour force status, acute hospital and private psychiatric hospital admission code N.....	490
Person – labour force status, code N.....	902
Person – labour force status, public psychiatric hospital admission code N.....	494
Person – level of difficulty with activities in life areas, code (ICF 2001) N	440
Person – level of satisfaction with participation in a life area, code N	1447
Person – lipid-lowering therapy status, code NN	924
Person – living arrangement, health sector code N.....	928
Person – location of impairment of body structure, code (ICF 2001) N	930
Person – low-density lipoprotein cholesterol level (calculated), total millimoles per litre N[N].N.....	251
Person – lower limb amputation due to vascular disease, code N.....	937
Person – main language other than English spoken at home, code (ASCL 2005) NN{NN}	941
Person – marital status, code N	951
Person – maximum stenosis coronary artery, percentage N[NN].....	956
Person – microalbumin level (measured), albumin/creatinine ratio N[NN].N.....	981
Person – microalbumin level (measured), total micrograms per minute N[NNN].N.....	983
Person – microalbumin level (measured), total milligrams per 24 hour N[NNN].N.....	985
Person – microalbumin level (measured), total milligrams per litre N[NNN].N	987
Person – most recent stroke date, DDMMYYYY	378
Person – mother’s original family name, text [X(40)].....	1013
Person – myocardial infarction (history), code N.....	1015
Person – nature of impairment of body structure, code (ICF 2001) N.....	244
Person – need for assistance with activities in a life area, code N.....	111
Person – non-invasive ventilation administration date, DDMMYYYY.....	379
Person – non-invasive ventilation administration time, hhmm	1617
Person – number of cigarettes smoked (per day), total N[N]	1656

Person – number of service contact dates, total N[NN].....	1091
Person – occupation (main), code (ANZSCO 1st edition) N[NNN]{NN}	944
Person – ophthalmological assessment outcome (left retina) (last 12 months), code N.....	1114
Person – ophthalmological assessment outcome (right retina) (last 12 months), code N.....	1116
Person – ophthalmoscopy performed indicator (last 12 months), code N.....	1118
Person – pacemaker insertion date, DDMMYYYY	382
Person – pacemaker insertion time, hhmm	1620
Person – percutaneous coronary intervention procedure type, code N.....	1162
Person – period of residence in Australia, years code NN.....	1166
Person – peripheral neuropathy indicator, code N	1168
Person – peripheral vascular disease indicator (foot), code N.....	1171
Person – person identifier, XXXXXX[X(14)].....	1173
Person – physical activity sufficiency status, code N	1185
Person – postal delivery service type, code AA[A(9)]	1198
Person – preferred language, code (ASCL 2005) NN{NN}.....	1211
Person – premature cardiovascular disease family history status, code N.....	1216
Person – primary percutaneous coronary intervention date, DDMMYYYY	383
Person – primary percutaneous coronary intervention time, hhmm.....	1621
Person – proficiency in spoken English, code N.....	1246
Person – proteinuria status, code N{N}.....	1251
Person – reason for non prescription of pharmacotherapy, code N	1271
Person – reason for readmission following acute coronary syndrome episode, code N[N]	1273
Person – referral to ophthalmologist indicator (last 12 months), code N.....	1394
Person – regular tobacco smoking indicator (last 3 months), code N.....	1654
Person – renal disease therapy, code N.....	1405
Person – rescue percutaneous coronary intervention date, DDMMYYYY	387
Person – rescue percutaneous coronary intervention time, hhmm.....	1622
Person – revascularisation percutaneous coronary intervention date, DDMMYYYY	388
Person – revascularisation percutaneous coronary intervention time, hhmm.....	1623
Person – severe hypoglycaemia indicator, code N.....	807
Person – sex, code N	1465
Person – technical nursing care requirement (day-time), total minutes NNN.....	413
Person – technical nursing care requirement (evening), total minutes NNN.....	419
Person – technical nursing care requirement (infrequent), total minutes NNN	423
Person – technical nursing care requirement (night-time), total minutes NNN	427
Person – telephone number, text [X(40)].....	1605
Person – time since quitting tobacco smoking (daily smoking), code NN.....	1670
Person – timing of ACE-inhibitor prescription, code N.....	1631
Person – timing of angiotensin II receptor blocker prescription, code N.....	1633
Person – timing of antithrombin therapy prescription, code N.....	1635

Person – timing of aspirin prescription, code N	1637
Person – timing of beta-blocker prescription, code N.....	1639
Person – timing of clopidogrel prescription, code N	1641
Person – timing of glycoprotein IIb/IIIa inhibitor prescription, code N.....	1643
Person – timing of statin prescription, code N.....	1645
Person – tobacco product smoked, code N.....	1664
Person – tobacco smoking daily use status, code N	1660
Person – tobacco smoking duration (daily smoking), total years N[N]	1658
Person – tobacco smoking frequency, code N.....	1662
Person – tobacco smoking quit age (daily smoking), total years NN	1666
Person – tobacco smoking start age (daily smoking), total years NN	1668
Person – tobacco smoking status, code N	1651
Person – triglyceride level (measured), total millimoles per litre N[N].N.....	1685
Person – troponin assay type, code N	1687
Person – troponin level (measured), total micrograms per litre NN.NN.....	1689
Person – troponin level measured date, DDMMYYYY.....	395
Person – troponin level measured time, hhmm	1630
Person – underlying cause of death, code (ICD-10 2nd edn) ANN-ANN	1717
Person – units of blood transfused, total N[NNN].....	1672
Person – vascular condition status (history), code NN.....	1723
Person – vascular procedures (history), code NN.....	1725
Person – ventricular ejection fraction test performed indicator, yes/no code N	1727
Person – visual acuity (left eye), code NN	1734
Person – visual acuity (right eye), code NN	1736
Person – waist circumference (measured), total centimetres NN[N].N	1738
Person – weight (measured), total grams NNNN	1761
Person – weight (measured), total kilograms N[NN].N.....	1763
Person – weight (self-reported), total kilograms NN[N]	1758
Person – year of first arrival in Australia, date YYYY	1809
Pregnancy (current) – complication, code (ICD-10-AM 7th edn) ANN{.N[N]}	273
Pregnancy (last previous) – pregnancy completion date, DDMMYYYY	358
Pregnancy (last previous) – pregnancy outcome, code N	1140
Pregnancy – estimated duration (at the first visit for antenatal care), completed weeks N[N].....	1213
Pregnancy – first day of the last menstrual period, date DDMMYYYY.....	558
Product of conception – gestational age, completed weeks N[N].....	640
Registered health professional – country of employment in registered profession, Australia/ other country code N.....	308
Registered health professional – extended leave status in registered profession, code N.....	528
Registered health professional – hours worked in clinical role, total hours NNN	781

Registered health professional – hours worked in health profession, total hours NNN	789
Registered health professional – hours worked in non-clinical role, total hours NNN	783
Registered health professional – hours worked in private sector, total hours NNN	785
Registered health professional – hours worked in public sector, total hours NNN.....	787
Registered health professional – intended years in profession, total years NN.....	891
Registered health professional – jobseeker status in registered profession, code N.....	898
Registered health professional – labour force status, registered health professional code N	492
Registered health professional – length of employment in profession in Australia, total years NN	909
Registered health professional – principal area of practice, midwifery code NN	98
Registered health professional – principal area of practice, nursing code NN	101
Registered health professional – principal area of practice, dental code NN.....	95
Registered health professional – principal area of practice, psychology code NN.....	104
Registered health professional – principal field of medicine, medical practitioner code N	556
Registered health professional – principal role, health profession code N	1241
Registered health professional – retirement status in registered profession, code N.....	1441
Registered health professional – visa type, code AANNN	1732
Registered health professional – work sector in health profession, code N	1767
Registered health professional – work setting, chiropractor code ANN.....	1770
Registered health professional – work setting, code ANN	1803
Registered health professional – work setting, dental code ANN	1773
Registered health professional – work setting, medical practitioner code ANN.....	1776
Registered health professional – work setting, midwife code ANN.....	1779
Registered health professional – work setting, nurse code ANN.....	1781
Registered health professional – work setting, optometrist code ANN.....	1785
Registered health professional – work setting, osteopath code ANN	1788
Registered health professional – work setting, pharmacist code ANN.....	1791
Registered health professional – work setting, physiotherapist code ANN.....	1794
Registered health professional – work setting, podiatrist code ANN	1797
Registered health professional – work setting, psychologist code ANN	1800
Residential stay – episode start date, DDMMYYYY	1409
Service contact – group session status, individual/group session indicator code ANN.N	871
Service contact – service contact date, DDMMYYYY.....	1458
Service delivery outlet – geographic location, code (ASGC 2009) NNNNN	638
Service provider organisation (address) – address line, text [X(180)].....	54
Service provider organisation (address) – address type, code N	60
Service provider organisation (address) – Australian postcode, code (Postcode datafile) {NNNN}	1203
Service provider organisation (address) – building/complex sub-unit identifier, [X(7)].....	188
Service provider organisation (address) – building/complex sub-unit type, code A[AAA]	191

Service provider organisation (address) – building/property name, text [X(30)]	195
Service provider organisation (address) – electronic communication address, text [X(250)].....	459
Service provider organisation (address) – electronic communication medium, code N	463
Service provider organisation (address) – floor/level identifier, [NNNA]	561
Service provider organisation (address) – floor/level type, code A[A]	565
Service provider organisation (address) – house/property identifier, text [X(12)]	794
Service provider organisation (address) – international postcode, text [X(10)]	1208
Service provider organisation (address) – lot/section identifier, N[X(14)]	935
Service provider organisation (address) – non-Australian state/province, text [X(40)].....	1063
Service provider organisation (address) – postal delivery point identifier, {N(8)}	1194
Service provider organisation (address) – street name, text [A(30)]	1581
Service provider organisation (address) – street suffix, code A[A].....	1585
Service provider organisation (address) – street type, code A[AAA]	1589
Service provider organisation (address) – suburb/town/locality name, text [A(50)]	1593
Service provider organisation (name) – name type, code N	1029
Service provider organisation (name) – organisation name, text [X(200)]	1124
Service provider organisation – Australian state/territory identifier, code N.....	126
Service provider organisation – coordinator of volunteers indicator, yes/no code N.....	298
Service provider organisation – feedback collection indicator, yes/no code N.....	549
Service provider organisation – feedback collection method, code N.....	551
Service provider organisation – level of service delivery, palliative care code N.....	920
Service provider organisation – most common service delivery setting, code N	1008
Service provider organisation – organisation end date, DDMMYYYY	1120
Service provider organisation – organisation start date, DDMMYYYY.....	1129
Service provider organisation – partner organisation type, palliative care code N[N].....	1153
Service provider organisation – service delivery setting, palliative care agency code N	1150
Service provider organisation – standards assessment indicator, yes/no code N	1569
Service provider organisation – standards assessment level, code N.....	1571
Service provider organisation – standards assessment method, code N	1573
Service provider organisation – working partnership indicator, yes/no code N.....	1806
Specialised mental health service organisation – accommodation services grants to non- government organisations, total Australian currency N[N(8)]	659
Specialised mental health service organisation – advocacy services grants to non- government organisations, total Australian currency N[N(8)]	662
Specialised mental health service organisation – carer participation arrangements status (carer consultants employed), code N	227
Specialised mental health service organisation – carer participation arrangements status (carer satisfaction surveys), code N.....	229
Specialised mental health service organisation – carer participation arrangements status (formal complaints mechanism), code N.....	231

Specialised mental health service organisation – carer participation arrangements status (formal participation policy), code N.....	233
Specialised mental health service organisation – carer participation arrangements status (regular discussion groups), code N	235
Specialised mental health service organisation – community awareness/health promotion services grants to non-government organisations (financial year), total Australian currency N[N(8)].....	664
Specialised mental health service organisation – consumer committee representation arrangements, code N	279
Specialised mental health service organisation – consumer participation arrangements (consumer consultants employed), code N.....	281
Specialised mental health service organisation – consumer participation arrangements (consumer satisfaction surveys), code N.....	283
Specialised mental health service organisation – consumer participation arrangements (formal complaints mechanism), code N.....	285
Specialised mental health service organisation – consumer participation arrangements (formal participation policy), code N.....	287
Specialised mental health service organisation – consumer participation arrangements (regular discussion groups), code N	289
Specialised mental health service organisation – counselling services grants to non-government organisations, total Australian currency N[N(8)]	666
Specialised mental health service organisation – independent living skills support services grants to non-government organisations, total Australian currency N[N(8)]	668
Specialised mental health service organisation – other and unspecified mental health services grants to non-government organisations, total Australian currency N[N(8)]	670
Specialised mental health service organisation – pre-vocational training services grants for non-government organisations, total Australian currency N[N(8)]	673
Specialised mental health service organisation – psychosocial support services grants for non-government organisations, total Australian currency N[N(8)]	675
Specialised mental health service organisation – recreation services grants to non-government organisations, total Australian currency N[N(8)]	677
Specialised mental health service organisation – respite services grants to non-government organisations, total Australian currency N[N(8)]	679
Specialised mental health service organisation – self-help support groups services grants for non-government organisations, total Australian currency N[N(8)].....	681
Specialised mental health service unit – implementation of National standards for mental health services status, code N	1033
Specialised mental health service – admitted patient care program type, code N	1484
Specialised mental health service – co-location with acute care hospital, code N	268
Specialised mental health service – number of hours staffed, average hours NN.....	1492
Specialised mental health service – number of supported public housing places, total N[N(5)]	1494
Specialised mental health service – residual expenditure (academic positions), total Australian currency N[N(8)]	1413

Specialised mental health service – residual expenditure (education and training), total Australian currency N[N(8)]	1415
Specialised mental health service – residual expenditure (insurance), total Australian currency N[N(8)]	1417
Specialised mental health service – residual expenditure (Mental Health Act Regulation or related legislation), total Australian currency N[N(8)]	1411
Specialised mental health service – residual expenditure (mental health promotion), total Australian currency N[N(8)]	1419
Specialised mental health service – residual expenditure (mental health research), total Australian currency N[N(8)]	1421
Specialised mental health service – residual expenditure (other indirect expenditure), total Australian currency N[N(8)]	1423
Specialised mental health service – residual expenditure (patient transport services), total Australian currency N[N(8)]	1425
Specialised mental health service – residual expenditure (program administration), total Australian currency N[N(8)]	1427
Specialised mental health service – residual expenditure (property leasing costs), total Australian currency N[N(8)]	1429
Specialised mental health service – residual expenditure (service development), total Australian currency N[N(8)]	1431
Specialised mental health service – residual expenditure (superannuation), total Australian currency N[N(8)]	1433
Specialised mental health service – residual expenditure (support services), total Australian currency N[N(8)]	1435
Specialised mental health service – residual expenditure (workers compensation), total Australian currency N[N(8)]	1437
Specialised mental health service – service setting, code N	1487
Specialised mental health service – target population group, code N	1489
State or Territory Government – mental health services grants to non-government organisations by non-health departments, total Australian currency N[N(8)]	975
Ventricular ejection fraction test – test date, DDMMYYYY	392
Ventricular ejection fraction test – test time, hhmm	1627
Ventricular ejection fraction test – test type, code N	1731
Ventricular ejection fraction – test result, code N	1729
Ventricular ejection fraction – test result, percentage N[N].N	1728
Workplace (address) – Australian postcode, code (Postcode datafile) {NNNN}	1205
Workplace (address) – suburb/town/locality name, text [A(50)]	1595

Feedback and contact details

The development of the data dictionaries is an ongoing process, reliant on the support and input of a range of data development groups to expand its scope and utility.

The data committees welcome feedback on existing metadata standards in the data dictionaries, and also submissions (either for new data items, modifications to existing items, or information on your data development activities).

Please feel free to contact the AIHW by any of the means listed below.

METeOR and Metadata Unit

For further information about the data dictionaries and for any comments and suggestions about national standards development processes, please contact the METeOR and Metadata Unit at the AIHW.

Phone: (02) 6244 1000

Fax: (02) 6244 1299

Email: datadevelopment@aihw.gov.au

Data Development Hotline

Phone: (02) 6244 1222

AIHW secretariat

For further information about the national data committees and their processes, contact the Executive Unit at the AIHW.

Phone: (02) 6244 1033

Fax: (02) 6244 1111

Further information can also be obtained from the Committees page on the AIHW website: <http://www.aihw.gov.au/committees/index.cfm>.
